Andrew Light, 1996 Environmental pragmatism is a new strategy in environmental thought it argues that theoretical debates are hindering the ability of the environmental movement to forge agreement on basic policy imperatives This new direction in environmental philosophy moves beyond theory advocating a serious inquiry into the practical merits of moral pluralism Environmental pragmatism as a coherent philosophical position connects the methodology of classical American pragmatist thought to the explanation solution and discussion of real issues **The Jurisdynamics of**

Environmental Protection Jim Chen, 2003 On November 1 and 2 2002 the University of Minnesota Law School and the University of Minnesota s Consortium on Law and Values in Health Environment and the Life Sciences sponsored a symposium in honor of Professor Daniel A Farber s contributions to environmental law The resulting symposium The Pragmatic Ecologist Environmental Protection as a Jurisdynamic Experience was published in volume 87 of the Minnesota Law Review The Environmental Law Institute has now combined the proceedings of The Pragmatic Ecologist with additional contributions from many other leading scholars *Sustainability* Bryan G. Norton, 2010-11-15

While many disciplines contribute to environmental conservation there is little successful integration of science and social values Arguing that the central problem in conservation is a lack of effective communication Bryan Norton shows in *Sustainability* how current linguistic resources discourage any shared multidisciplinary public deliberation over environmental goals and policy In response Norton develops a new interdisciplinary approach to defining sustainability the cornerstone of environmental policy using philosophical and linguistic analyses to create a nonideological vocabulary that can accommodate scientific and

evaluative environmental discourse Emphasizing cooperation and adaptation through social learning Norton provides a practical framework that encourages an experimental approach to language clarification and problem formulation as well as an interdisciplinary approach to creating solutions By moving beyond the scientific arena to acknowledge the importance of public discourse Sustainability offers an entirely novel approach to environmentalism

Democracy and the Claims of Nature Ben A. Minteer, Bob Pepperman Taylor, 2002 In *Democracy and the Claims of Nature* the leading thinkers in the fields of environmental political and social theory come together to discuss the tensions and sympathies of democratic ideals and environmental values The prominent contributors reflect upon where we stand in our understanding of the relationship between democracy and the claims of nature *Democracy and the Claims of Nature* bridges the gap between the often competing ideals of the two fields leading to a greater understanding of each for the other

Human Dignity and the Adjudication of Environmental Rights Dina L. Townsend, 2020-06-26 Focusing on contemporary debates in philosophy and legal theory this ground breaking book provides a compelling enquiry into the nature of human dignity The author not only illustrates that dignity is a concept that can extend our understanding of our environmental impacts and duties but also highlights how our reliance on and relatedness to the environment further extends and enhances our understanding of dignity itself

Refounding Environmental Ethics Ben A. Minteer, 2012 Explains environmental pragmatism and shows how to apply it to real world issues

Environmental

Philosophy and Environmental Activism Don E. Marietta, Lester Embree, 1995-09-06 This collection of new essays by eleven distinguished environmental philosophers addresses two main questions first whether environmental philosophy and ethics should be seen as a form of applied philosophy or as something else perhaps best called practical philosophy and second how environmental philosophy is practiced in human life especially in the lives of academics **Character and Environment**

Ronald L. Sandler, 2009-05-22 In *Character and Environment* Ronald L Sandler brings together contemporary work on virtue ethics with contemporary work on environmental ethics He demonstrates the many ways that any ethic of character can and should be informed by environmental considerations He also develops a pluralistic virtue oriented environmental ethic that accommodates the richness and complexity of our relationship with the natural environment and provides effective and nuanced guidance on environmental issues **Skeptical Environmentalism**

Robert Joseph Kirkman, 2002-02-01 In *Skeptical Environmentalism* Robert Kirkman raises doubts about the speculative tendencies elaborated in environmental ethics deep ecology social ecology postmodern ecology ecofeminism and environmental pragmatism Drawing on skeptical principles introduced by David Hume Kirkman takes issue with key tenets of speculative environmentalism namely that the natural world is fundamentally relational that humans have a moral obligation to protect the order of nature and that understanding the relationship between nature and humankind holds the key to solving the environmental crisis Engaging the work of Kant Hegel Descartes Rousseau and Heidegger among others Kirkman reveals the relational worldview as an unreliable basis for knowledge and truth claims and more dangerously as harmful to the intellectual sources from which it takes inspiration Exploring such themes as the way knowledge about nature is formulated what characterizes an ecological worldview how environmental worldviews become established and how we find our place in nature *Skeptical Environmentalism* advocates a shift away from the philosopher's privileged position as truth seeker toward a more practical thinking that balances conflicts between values and worldviews **Seeking Environmental Justice**

Sarah Wilks, 2008 Based on presentations made at the conference entitled *Environmental Justice and Global Citizenship* held in July 2006 at Oxford UK 14 papers consider environmental concerns against their social contexts Contributors address theories in environmental management as they pertain to society and to orientations in perverse ecologies the framework of sustainability including voluntary agreements and incentives class and conflict in environmental governance including the uses of effective conflict information management including the public debate on genetic modification and the differences between experts and laymen environmental activism education including environmental education in a course on ethics and international development and the effects of free trade corporate capitalism and empowerment of professionals on sustainability and international environmental law **Environmental Ethics** Marion Hourdequin, 2024-01-25 What is environmental virtue Is developing good habits enough What does climate justice require Is ecological restoration just another form of the human domination of nature Exploring these questions and more this book provides an up to date and balanced introduction to environmental

ethics It first examines ethical theory then ties theory to practice showing how values guide environmental policies but also how policies and institutions shape environmental values Updated and expanded to engage with the latest scholarship scientific findings and societal challenges this 2nd edition features New sections on food ethics multispecies justice intergenerational ethics and the Anthropocene Contemporary case studies focusing on the rights of nature the use of biotechnology in ecological restoration and just climate transitions Expanded coverage of diverse philosophical traditions including Confucian Daoist and Indigenous ethical perspectives Updated discussion questions further reading sections and online resources Exploring the possibilities and limitations inherent in both classical ethical models and modern theoretical approaches to the environment this is a key resource for teaching students to think ethically about the world we live in

Self, War, and Society Mary Jo Deegan, 2017-09-08 George Herbert Mead 1863 1931 is a founding figure in the field of sociology His stature is comparable to that of his contemporaries Emile Durkheim and Max Weber Mead's contribution was a profound and unique American theory that analyzed society and the individual as social objects As Mead saw it both society and the individual emerged from cooperative democratic processes linking the self the other and the community Mary Jo Deegan a leading scholar of Mead's work traces the evolution of his thought its continuity and change She is particularly interested in the most controversial period of Mead's work in which he addressed topics of violence and the nation state Mead's theory of war peace and society emerged out of the historical events of his time particularly World War I During this period he went from being a pacifist along with his contemporaries John Dewey and Jane Addams to being a strong advocate for war From 1917 1918 Mead became a leader in voicing the need for war based on his theory of self and society After the war he became disillusioned with President Woodrow Wilson with Americans failure to support mechanisms for international arbitration and with the political reasons for American participation in World War I He returned to a more pacifist and cooperative model of behavior during the 1920s when he became less political more abstract and more withdrawn from public debate The book includes Deegan's interpretation of Mead's early social thought his friendship and family networks the historical context of America at war and the importance of analysis of violence and the state from Mead's perspective She also provides illustrative selections from Mead's work much of which was previously unpublished

Moral Theory and Climate Change Dale E. Miller, Ben Eggleston, 2020-04-02 Climate change has become the most pressing moral and political problem of our time Ethical theories help us think clearly and more fully about important moral and political issues And yet to date there have been no books that have brought together a broad range of ethical theories to apply them systematically to the problems of climate change This volume fills that deep need Two preliminary chapters an up to date synopsis of climate science and an overview of the ethical issues raised by climate change set the stage After this ten leading ethicists in ten separate chapters each present a major ethical theory or more broadly perspective and discuss the implications of that view for how we decide to respond to a rapidly warming planet Each chapter first provides a brief exposition of the view before

working out what that theory has to say about climate change and our response to the problems it poses

Key features

- Up to date synopsis of climate science
- Clear overviews of a wide range of ethical theories and perspectives by leading experts
- Insightful discussions of the implications of these theories and perspectives for our response to climate change

Teaching Sustainability / Teaching Sustainably Kirsten Allen Bartels, Kelly A. Parker, 2023-07-03

Over the coming decades every academic discipline will have to respond to the paradigm of more sustainable life practices because students will be living in a world challenged by competition for resources and climate change and will demand that every academic discipline demonstrate substantial and corresponding relevance

This book takes as its point of departure that integrating a component of sustainability into a discipline specific course arises from an educator asking a simple question in the coming decades as humanity faces unprecedented challenges what can my discipline or area of research contribute toward a better understanding of these issues

The discipline need not be future oriented an archaeologist for instance could incorporate into a course some aspects of sustainable archaeological practices in areas threatened by rapid climate change as well as

examples of sustainable or unsustainable ways of living practiced by members of the long gone society under investigation This book also argues that courses about sustainability need to cross disciplinary boundaries both because of the inter relatedness of the issues and because students will require the ability to use interdisciplinary approaches to thrive through the multiple careers most of them will face The contributions to this book are presented under four sections Sustainability as a Core Value in Education considers the rationale for incorporating sustainability in disciplinary courses Teaching Sustainability in the Academic Disciplines presents eight examples of courses from disciplines as varied as agriculture composition engineering and teacher education Education as a Sustainable Practice reviews how the physical environment of the classroom and the delivery of instruction need themselves to reflect the values being taught The final section addresses the issues of leadership and long term institutional change needed to embed sustainable practice as a core value on campus

Canadian Issues in Environmental Ethics Wesley Cragg, Allan Greenbaum, Alex Wellington, 1997-06-10 Is it possible to design a forest policy that satisfies ethical and environmental concerns and is acceptable to business labour and First Nations representatives What is the best path through the tangle of ethical issues surrounding the collapse of the east coast fishery What sort of obligations does a rich nation such as Canada have to satisfy the claims of global environmental justice These are the sorts of issues in applied ethics that are tackled in this collection of essays the vast majority of which have been written especially for this volume It is the first Canadian collection of its kind The book is divided in to sections detailing with such topics as the environment and the economy ethical issues relating to non human animals issues of gender and issues relating to native peoples Most of the authors are philosophers though specialists in geography geology and the social sciences are also among the contributors Frequent reference is made to theoretical ethical concerns but the focus throughout is on applied ethics and a variety of case studies are included Examples include essays on animal rights and the case of native hunters surface mining in Northern Ontario the Quebec arctic and fishing communities in the Maritimes Comparisons are frequently drawn to policies and ethical questions arising in other countries most prominently the United States
