Mofizur Rahman, Mohammad Azizur Rahman, 2015-09-28 This book presents a comprehensive and detailed description of

remediation techniques for metal contaminated soils derived from both natural processes and anthropogenic activities Using a methodical step by step presentation the book starts by overviewing the origin of toxicants and the correlated comparative extent of contamination to the environment The legal provisions as proposed or applied in different countries are then discussed to explain the global regulatory situation regarding soil contamination and the extent of consequent concern The core part of this publication describes the major techniques for in situ or ex situ treatment of the contaminated soil to meet the regulatory limits Finally risk evaluation is incorporated giving special attention to possible impacts during or after implementation of the remediation strategies The intrusion of metals in soils mostly occurs from various anthropogenic activities e g agricultural practices industrial activities and municipal waste disposal The volumes of metal contaminated soil are becoming greater than before and are ever increasing due to rapid urbanization intensified industrialization and or population booms in certain parts of the world Hence the options previously proposed such as isolation of the contaminated site or movement of the contaminated mass to a secure disposal site after excavation are becoming unsuitable from the economic point of view and instead decontamination alternatives are preferred This book will help readers such as scientists and regulators to understand the details of the remediation techniques available to deal with the soils contaminated by toxic metals

**DOD operational ranges more reliable cleanup cost estimates and a proactive approach to identifying contamination are needed : report to congressional requesters.** , 2004 For decades the Department of Defense DOD has tested and fired munitions on millions of acres of operational ranges These munitions contain various constituents such as lead trinitrotoluene TNT and ammonium perchlorate salt perchlorate that are in some instances known or suspected of causing health effects such as damage to the central and peripheral nervous systems cancer and interfering with thyroid function Concerns about the potential cost to

clean up munitions prompted Congress to require that DOD develop an estimate for what it would cost to clean up its operational ranges The National Defense Authorization Act for Fiscal Year 2002 required DOD to provide 1 a comprehensive assessment of unexploded ordnance discarded military munitions and munitions constituents at current and former DOD facilities and 2 an estimate of the aggregate projected cost of remediation cleanup at operational ranges 1 stated as a range of costs including a low and high estimate As of April 2003 DOD identified 10 444 operational ranges located in the United States and its territories with Army operational ranges accounting for 94 percent of the total DOD estimated it would cost between 16 billion and 165 billion to clean up unexploded ordnance discarded military munitions and munitions constituents on these operational ranges constituents on these operational ranges

Risk Methodologies for Technological Legacies  
Dennis Bley,Vitaly A. Eremenko,2012-12-06 The Cold War Era left the major participants the United States and the former Soviet Union FSU with large legacies in terms of both contamination and potential accidents Facility contamination and environmental degradation as well as the accident vulnerable facilities and equipment are a result of weapons development testing and production Although the countries face similar issues from similar activities important differences in waste management practices make the potential environmental and health risks of more immediate concern in the FSU and Eastern Europe In the West most nuclear and chemical waste is stored in known contained locations while in the East much of the equivalent material is unconfined contaminating the environment In the past decade the U S started to address and remediate these Cold War legacies Costs have been very high and the projected cost estimates for total cleanup are still increasing Currently in Russia the resources for starting such major activities continue to be unavailable
