Killinger,A. Mooradian,2013-06-29 The field of optical and laser remote sensing has grown rapidly in recent years This dynamic growth has been stimulated not only by technological advances in lasers detectors and optical system design but also by the potential application of remote sensing systems to a wide variety of atmospheric measurements Optical and laser remote sensing can allow single ended measurement capability not offered by conventional point detection techniques While many past measurements have been associated with laboratory research practical systems have recently been developed which are capable of remotely detecting measuring and tracking a wide range of molecular and atomic species in the atmosphere with concentrations of parts per billion and at ranges over 100 km This book is a compilation of papers which represent an overview of the present state of development of optical and laser remote sensing technology The subjects covered include both passive and active remote sensing techniques in the UV visible and IR spectral regions related laser and detector technology and atmospheric propagation and system analysis considerations While the papers do not constitute an exhaustive treatment of the excellent research being conducted in this field they are representative of the wide diversity of present efforts It is hoped that the reader will gain a general understanding of the current research in optical and laser remote sensing as well as an overview of current systems development **Indian Journal of Environmental Protection** ,1986 Social Entrepreneurship: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2019-04-01 Businesses are looking for methods to incorporate social entrepreneurship in order to generate a positive return to society Social enterprises have the ability to improve societies through altruistic work to create sustainable work environments for future entrepreneurs and their communities Social Entrepreneurship Concepts Methodologies Tools and Applications is a useful scholarly resource that examines the broad topic of social entrepreneurship by looking at relevant theoretical frameworks and fundamental terms It also addresses the challenges and solutions social entrepreneurs face as they address their corporate social responsibility in an effort to redefine the goals of today's enterprises and enhance the potential for growth and change in every community Highlighting a range of topics such as the social economy corporate social responsibility and competitive advantage this multi volume book is ideally designed for business professionals entrepreneurs start up companies academics and graduate level students in the fields of economics business administration sociology education politics and international relations **Advances in Solid and Hazardous Waste Management** Sudha Goel,2017-08-03 This book presents reviews examples and case studies of innovative applications in solid and hazardous waste management

The economics of waste management have since become a significant research area in their own right and two chapters address these issues. In addition, dedicated chapters cover specific categories of waste such as biomedical and institutional waste, plastics and e-waste. The book subsequently discusses newer analytical methods like SEM, EDX, XRD and optical microscopy along with selected older methods for sampling and characterizing different types of waste. The various applications of mathematical tools like linear optimization, various software models like WISCLEACH and DRASTIC and tools like remote sensing and GIS are illustrated in many of the chapters. Lastly, since composting is one of the most popular treatment methods for managing the organic component of municipal solid waste, the book provides an overview of composting and the fundamentals of microbiology that are essential to understanding waste-related biological processes. The book was primarily written for students and practitioners in the field who are already familiar with the basics. All chapters were prepared by practicing experts and scholars in the field and are intended to help readers better understand and apply these principles and practices in their own endeavours.

Key topics covered in the book: The circular economy and the economics of solid waste management; Various remote sensing and GIS applications for managing municipal solid waste; Coal fires in mines; Changes in land use and land cover in industrial areas etc; Treatment and management of different types of solid waste; Institutional including biomedical, residential, e-waste, plastic and ash from thermal power plants; Sampling and characterization of municipal waste and compost; Fundamentals of microbiology; Overview of environmental regulations especially those pertaining to solid and hazardous waste management.
