Atiq Rahman, 1994 Contributed articles **Climate Change and Food Security in South Asia** Rattan Lal, Mannava VK

Sivakumar, S.M.A. Faiz, A.H.M. Mustafizur Rahman, Khandakar R. Islam, 2010-10-17 This book addresses an important topic of food security in South Asia with specific reference to climate change Of the 1 billion food insecure people in the world more than 30% are in South Asia The problem of food insecurity may be exacerbated by the projected climate change especially

because of the water scarcity caused by rapid melting of the glaciers in the Himalayas and increase in variability in monsoonal rains and frequency of extreme events Furthermore large populations of Bangladesh and other coastal regions may be displaced by sea level rise Thus this volume addresses recommended land use and soil water crop vegetation management practices which would enable land managers to adapt to climate disruption by enhancing soil ecosystem social resilience In addition to biophysical factors this book also addresses the issues related to human dimensions including social ethnical and political considerations

Tropical Freshwater Wetlands H. Roggeri, 2013-03-09 Wetlands could be described as land and water at Tropical wetlands one and the same time and as such are very specific on the brink ecosystems Their often rich variety of resources makes them highly valuable to the peoples who live With a few exceptions like the Everglades in the or regularly stay in them However access to them United States the last remaining large wetlands are to be found in developing countries Perhaps this can be difficult and those unaware of their services be explained by insufficient financial resources frequently associate wetlands with such nuisances and calamities as mosquitos disease floods impen lower popUlation density or a different concept of etrable wastelands etc As a result these areas are development and well being Whatever the reasons often perceived as obstacles to human development many tropical wetlands still exist and support the and well being subsistence of many communities But for how much History reflects these two views Wetlands may longer have been the cradle of great civilizations like the During the last few decades tropical wetlands Maya Inca Aztec Nilotic and Mesopotamian have also been destroyed or considerably altered Dams and embankments now prevent water from civilizations but elsewhere their destruction allowed other societies to develop For example the Nether spreading into the floodplains of several rivers like lands literally emerged from the waters thanks to the Senegal Volta and Nile

Vulnerability and Adaptation to Climate Change for Bangladesh S. Huq, Z. Karim, M. Asaduzzaman, F. Mahtab, 2013-03-09 Bangladesh faces many challenges So long it has been mainly the traditional ones of socio economic development and eradication of poverty Environment as a major factor in this process has only recently entered the scene But even before environmental considerations in the development process has become the normal practice the spectre of climate change has reared its ugly head While Bangladesh is not unique among developing countries in being at the receiving end regarding the causes and consequences of climate change both in the literal and allegorical sense of the term the fact remains that it has made the prospects for sustainable socio economic development in the country much more complex and formidable than before Both for her own sake and the sake of the global community at large therefore Bangladesh has to initiate actions at various levels to face the challenge from now on The present study is a part of that process In 1996 the Governments of USA and Bangladesh together decided to initiate a comprehensive study on climate change in Bangladesh A unique consortium of public and non governmental research organisations with support from the relevant administrative arms of the Government carried out the study over 1996 and 1997 The report has been accepted by the Government and

several of its recommendations are in the process of implementation While the direction of climate change is broadly certain its details leave much scope for speculation and interpretation

Hydrological Characteristics And Fluvial Morphology In The Southern Part Of Nadia District In West Bengal, India Dr. Mitrajit Chatterjee,2021-08-13 The present work is a comprehensive and humble attempt to shape the volume HYDROLOGICAL CHARACTERISTICS AND FLUVIAL MORPHOLOGY IN THE SOUTHERN PART OF NADIA DISTRICT IN WEST BENGAL INDIA on the basis of details of the hydrological characteristics both surface and underground and fluvial morphology i e the fluvial landforms like cut offs wetlands locally termed as bils marshes etc and changes that have occurred in the riverine conditions in the study area obtained from various sources such as maps reports books journals etc and more importantly intensive field study *Floods* Dennis J. Parker,2000 A comprehensive collection of new research An extensive range of case studies covering major floods and regions prone to flooding worldwide Natural Resource Degradation and Human-Nature Wellbeing Rashed Al Mahmud Titumir,Tanjila Afrin,Mohammad Saeed Islam,2023-03-09 The book addresses the gaps in the body of knowledge from two grounds Firstly it adds value through explaining the dynamics of natural resource governance by focusing on the particular arenas of biodiversity resources water resources and climate change in developing country context Secondly it critically scrutinizes the market centric perspectives on one hand and combines political economy questions that are generally overlooked in discussions of current resource governance framework on the other It develops a new framework to examine the reasons behind the degradations of natural resources to offer sustainable solutions to the problems It shows that the natural resources have been exploited beyond sustainable limits due to the structural rigidities embedded in and reproduced by fragile institutions and unequal power sharing arrangements under the market centric economic system The book formulates a new understanding of sustainability in case of usage and management of natural resources by incorporating the idea of human sociality It highlights the importance of the well being of nature and human beings must go side by side one without the other is not a sustainable option The book contains key learnings for scholars and researchers working in the field of development studies who wish to gain a deeper understanding on the sustainable natural resource governance specifically in the contexts of developing countries For policymakers and policy advocates the book serves as the groundwork on policies regarding biodiversity resources water resources and climate change specific to the context of developing countries providing more relevant contents in terms of laying out justification for policy objectives The Ganges Water Diversion: Environmental Effects and Implications M. Monirul Qader Mirza,2006-02-03 This book deals with environmental effects on both sides of the border between Bangladesh and India caused by the Ganges water diversion This issue came to my attention in early 1976 when news media in Bangladesh and overseas began publications of articles on the unilateral withdrawal of a huge quantity of water from the Ganges River through the commissioning of the Farakka Barrage in India I first pursued the subject professionally in 1984 while working as a contributor for Bangladesh Today Holiday and

New Nation During the next two decades I followed the protracted hydro political negotiations between the riparian countries in the Ganges basin and I traveled extensively to observe the environmental and ecological changes in Bangladesh as well as India that occurred due to the water diversion The Ganges one of the longest rivers of the world originates at the Gangotri glacier in the Himalayas and flows across the plains of North India Eventually the river splits into two main branches and empties into the Bay of Bengal The conflict of diversion and sharing of the Ganges water arose in the middle of the last century when the government of India decided to implement a barrage at Farakka to resolve a navigation problem at the Kolkata Port **Climate Change and the Coast** Bruce Glavovic,Mick Kelly,Robert Kay,Ailbhe Travers,2014-12-04
