Paul Wright, Maurice E. Tucker, 2009-04-15 Calcretes are an important component of many ancient fluvial lacustrine and shallow marine carbonate sequences and they are widely developed in many parts of the world at the present time Calcretes are useful to the earth scientist involved in reconstructing ancient environments palaeoclimates and palaeographics and they may also reveal details of soil biota and chemistry Over the last two decades the journal Sedimentology has published a number of articles on this subject and a compilation of them is presented here In addition to the five main sections this volume also includes an introduction to the subject that offers a review of recent work on calcretes The collection of papers illustrates the range of calcrete occurrences and the great variety of textures and fabrics This volume is authored and edited by experts and will serve as more than an introduction to the subject for geologists soil scientists and geographers If you are a member of the International Association of Sedimentologists for purchasing details please see http www iasnet org publications details asp code RP2 Oceanography and Marine Biology, Volume 20 Harold Barnes, 1982-12-31 This book provides a review covering the basics of marine research special topics and emerging areas in fields of oceanography and marine biology It is intended for researchers and students in all fields of marine science **Diagenesis, IV** G.V. Study: Technical reports ,1981 Publications of the Planetary Biology Program for 1978: A Special Bibliography, 1979 Environmental Science for Environmental Management Timothy O'Riordan, 2014-10-13 Environmental Science for Environmental Management has guickly established itself as the leading introduction to environmental science demonstrating how a more environmental science can create an effective approach to environmental management on different spatial scales Since publication of the first edition environmentalism has become an increasing concern on the global political agenda Following the Rio Conference and meetings on population social justice women urban settlement and oceans civil society has increasingly promoted the cause of a more radical agenda ranging from rights to know fair trade social empowerment social justice and civil rights for the oppressed as well as novel forms of accounting and auditing This new edition is set in the context of a changing environmentalism and a challenged science It builds on the popularity and applicability of the first edition and has been fully revised and updated by the existing writing team from the internationally renowned School of Environmental Science at the University of East Anglia Environmental Science for Environmental Management is an essential text for for undergraduate students of environmental science environmental management planning and geography It is invaluable supplementary reading for environmental biology and environmental chemistry courses as well as for engineering economics and business studies **Salt Lakes** W.D. Williams, 2012-12-06 This publication is composed of papers presented at an International Symposium on Athalassic Inland Salt Lakes which was hosted by the University of Adelaide South Australia during a week in October 1979 The genesis of the Symposium was at the Copenhagen Congress of the International Association of Limnology S 1 L where it was noted that a number of papers concerned with inland saline lakes were distributed throughout sessions in such a way as to make it difficult to attend all of them A number of participants at the Congress felt that the ecology of salt lakes had greater homogeneity or cohesiveness than this sort of distribution would suggest and it was decided that a symposium on salt lakes be held. The symposium was the first under the aegis of the S l L to be held in Australia and it was very well attended with participants coming from many countries The week long programme produced a number of lively and interesting sessions on all aspects of athalassic saline lakes Participants stayed on after the Symposium for an expedition to Lake Eyre in the nQrth of South Australia and were given one of the best of all possible introductions to the Australian environment Dynamics of Nutrient Cycling and Food Webs Donald L. DeAngelis, 2012-12-06 In all fields of science today data are collected and theories are developed and published

faster than scientists can keep up with let alone thoroughly digest In ecology the fact that practitioners tend to be divided between such subdisciplines as aquatic and terrestrial ecology as well as between popula tion community and ecosystem ecology makes it even harder for them to keep up with all relevant research Ecologists specializing in one sub discipline are not always aware of progress in another subdiscipline that relates to their own Syntheses are frequently needed that pull together large bodies of information and organize them in ways that makes them more coherent and thus more understandable I have tried to perform this task of integration for the subject area that encompasses the interrelationships between the dynamics of ecological food webs and the cycling of nutrients I believe this area cuts across many of the subdisciplines of ecology and is pivotal to our progress in understanding ecosystems and in dealing with human impacts on the environment Many current ecological problems involve human disturbances of both food webs and the nutrients that cycle through them Little progress can be made towards elucidating the complex feedback relations inherent in the study of nutrient cycles in ecological systems without the tools of mathematics and computer modelling These tools are therefore liberally used throughout the book Biogeochemistry of Ancient and Modern Environments P. A. Trudinger, M. R. Walter, B. J. Ralph, 2013-06-29 This volume contains a selection of papers presented to the Fourth Internation 1 Symposium on Environmental Biogeochemistry ISEB and a conference on Biogeochemistry in Relation to Mining Industry and Environmental Pollution Leaching Conference held in Canberra Aust ralia on August 26 31 and September 3 4 1979 respectively The ISEB were established to provide a forum for uninhibited exchange of information and ideas among the biological chemical atmospheric and geological scientists working in the common area of biogeochemistry encompassing soil and other earth sciences as well as the hydrosphere and atmosphere By linking the fourth ISEB with the Leachin Conference the scope of discussions was extended to encompass the application of biogeochemical processes to the mining industry This wide ranging philosophy is reflected in the breadth and diversity of the subjects covered in this book The published papers are expanded versions of those presented at the meetings They have all been scrutinized by at least one referee in addition to the editors About 20% of the contributions to the meetings are not included either because authors did not wish to publish or because the papers were not accepted by the editors **Applied Ecology Abstracts** ,1979 **Microfacies Analysis of Limestones** E. Flügel, 2012-12-06 Metal Pollution in the Aquatic Environment U. Förstner, G.T.W. Wittmann, 2012-12-06 Aquatic chemistry is becoming both a rewarding and substantial area of inquiry and is drawing many prominent scientists to its fold Its literature has changed from a compilation of compositional tables to studies of the chemical reactions occurring within the aquatic environments But more than this is the recognition that human society in part is determining the nature of aquatic systems Since rivers deliver to the world ocean most of its dissolved and particulate components the interactions of these two sets of waters determine the vitality of our coastal waters. This significant volume provides not only an introduction to the dynamics of aquatic chem istries but also identifies those materials that jeopardize

the resources of both the marine and fluvial domains Its very title provides its emphasis but clearly not its breadth in considering natural processes The book will be of great value to those environmental scientists who are dedicated to keeping the resources of the hydrosphere renewable As the size of the world population becomes larger in the near future and as the uses of materials and energy show parallel increases the rivers and oceans must be considered as a resource to accept some of the wastes of society The ability of these waters and the sediments below them to accommodate wastes must be assessed continually The key questions relate to the capacities of aqueous systems to carry one or more pollutants **ICCROM** Master List of Acquisitions International Centre for the Study of the Preservation and the Restoration of Cultural Property. NASA Technical Memorandum ,1979 **Biological Aspects of Freshwater Pollution** O. Library, 1979 Ravera, 2013-10-22 Ten well known experts in their specific field illustrate and discuss the fundamentals of the effects of pollution on fresh water organisms populations and communities providing an up to date picture of research on this crucial problem The Glasgow Naturalist, 2002 Includes the Transactions and proceedings of the Society 1909 55 called third series 1909 30
