Environmental Change and Challenge 4e / Making Sense in Geography Pack Philip Dearden, Bruce Mitchell, 2013-04-02 a href <http://www.oupcanada.com/ebrochure/dearden/index.html>img src images/hed/closer_look_btn.gif aNow in a fourth edition *Environmental Change and Challenge* is a fascinating introduction to the field of environmental studies. Respected geographers Philip Dearden and Bruce Mitchell explore a host of contemporary environmental issues such as drought, flooding, loss of biodiversity, ecosystem toxicity and crop failure while also offering a detailed overview of basic scientific concepts. Maintaining the same optimistic tone of previous editions, the text emphasizes that informed global citizens are the key to meeting these challenges and generating positive change. With increased coverage of demography, more international examples and new material on human health and the environment throughout, this updated edition shows students how environmental concerns impact our daily lives both at home and abroad.

Environmental Change and Challenge Philip Dearden, Bruce Mitchell, 1997 The earth's fragile ecosystems support all life forms. The continued survival of these ecosystems will determine the survival of different species, including humans. The scope of *Environmental Change and Challenge* includes such topics as how marine and terrestrial ecosystems work, how predator-prey relationships form part of the intricate web linking all species, how the survival or extinction of one species affects the survival of others in a food chain, how humans have caused lasting environmental damage and how we must now learn to manage the resources we depend on in much more effective ways that encompass adaptive management, conflict resolution, stakeholders and partnerships and sustainable management. The book encourages readers to take a proactive approach by becoming better informed about the planet's life support systems and by taking more responsibility as individuals for minimizing their impact on the environment. Boxes highlight suggestions for recycling and reducing waste and consumption as well as interesting facts such as how to identify animal tracks and how Native peoples have used traditional ecological knowledge to manage the resources they depend on. There are numerous photographs of wildlife, ecozones, wilderness areas and the effects of human activities. Illustrations show, among other things, the composition of food chains and how various cycles function. Sidebars contain quotes from a number of sources. An appendix of conservation organizations, including ones involved in preserving endangered wildlife, oceans and rainforests as well as those that work to conserve energy, water and lands, is a useful resource for the reader who wants to become more proactive in conservation. A glossary of selected terms rounds out this comprehensive perspective on humans' role in the future of the environment and in our own future.

Using an integrative approach, the authors blend their own work on indigenous adjustments to climatic hazards in Bangladesh with an analysis of the role of modern engineering intervention and disaster management policies in alleviating these hazards. There is also an emphasis on the environment and people of coastal Bangladesh who are at risk of inundation due to global warming-induced sea level rise. Thus, in addition to analyzing main climatic disasters at some length—tropical cyclones, hurricanes, floods, droughts, and sea level rise—key topics of human dimensions of climate change include climate change victims, climate refugees, climate justice, public policies on climate change, and a sample of adaptation measures for living with the rising sea levels.
