Environmental Contaminants Assessment And Control:

Environmental Contaminants Daniel A. Vallero, 2010-08-05 Environmental Contaminants serves as a tool for environmental professionals to produce technically sound and reproducible scientific evidence. It identifies ways to clean up environmental problems in air, water, soil, sediment, and living systems. Ethical issues, environmental management, and professionalism and environmental economic problems are illustrated to assist the reader in understanding and applying quantitative analysis of environmental problems. Real life solutions for practicing environmental professionals. Example problems, sidebars, and case studies to illustrate ethical issues, environmental economic problems, and environmental management. Explanation of scientific principles and concepts needed for risk assessment, waste management, contaminant transport, environmental hydrogeology, and environmental engineering chemistry. A fully supportive glossary, appendices, and tables throughout the text contain physical, chemical, and biological resources necessary for all environmental practitioners.

Environmental Contaminants: Assessment And Control (Hb) Vallero, 2004-01-01 **Hazard Assessment and Control of Environmental Contaminants (Eco hazard 99)** Saburo Matsui, Y. Shimizu, 2000. The Eco hazard 99 conference brought together scientists, engineers, administrators, and policy makers from around the world who work in the fields of environmental and ecological toxicology to exchange the latest information on hazardous chemicals in the environment. There were a large number of contributions on endocrine disruption in ecosystems, possibly the hottest issue of the moment, but significant work was also reported on DNA damaging chemicals, heavy metals, and other environmental toxic substances. From the papers presented at the conference, 48 have been selected for these proceedings. They focus on the following topics: detection of endocrine disruptors, detection of genotoxic contaminants, heavy metal and radionuclide contamination, PCDDs, PCBs, and organochlorine contamination, ecological toxicity assessment, environmental risk assessment, hazardous contaminants in wastewaters, physico-chemical treatment of hazardous contaminants, biological treatment of environmental contaminants, and advanced analytical methods.

EMERGING CONTAMINANTS INTO THE ENVIRONMENT: CONTAMINATION PATHWAYS AND CONTROL Vincenzo Belgiorno, Luigi Rizzo, 2012-01-26. The increasing concern for the continuous release into the environment of emerging contaminants from diffuse and point sources such as urban wastewater treatment plants arouses high interest in technical and scientific community. The characterization of pollution sources and contamination pathways, natural degradation in surface water, disinfection by products, NDMA formation in drinking water, emerging contaminants removal by wastewater treatment processes, biological processes, advanced oxidation processes, AOPs, and solar driven AOPs to control their release into the environment, as well as to make wastewater reuse safer, are all issues specifically addressed in this book by internationally recognised experts from research and academic institutions. This book can be a useful tool for investigators and practitioners to approach the problem of the control of emerging contaminants spreading into the environment.
