Environmental Contaminants Ecosystems And Human Health:

Environmental Contaminants, Ecosystems and Human Health Shyamal K. Majumdar, Eugene Willard Miller, 1995-01-01

Ecological and Human Health Impacts of Contaminated Food and Environments Ming Hung Wong, 2025-07-16 This book discusses linkages between the natural and disturbed chemical composition of the earth's surface and ecological and human health. It reviews the environmental geochemical cycles of natural elements and persistent toxic substances (PTS) in the environment, highlighting the degradation of soil and water resources due to human activities such as extraction and usage of minerals. There is an attempt to provide evidence concerning the health effects of consuming contaminated food due to frequent consumption of mercury-laden fish. Lastly, sources, fates, and ecological effects of various PTS are presented, including microplastics and associated chemicals. Details linkages between the natural and disturbed chemical composition of the earth's surface and environmental and human health, focusing on food contamination. Discusses emerging pollutants with potential widespread hazardous effects such as bisphenol A and phthalates. Reviews safe food production and quality as well as the management, regulation, and policies concerning toxic chemicals. Contains cutting-edge knowledge on safe food production and remediating technologies. Describes how geochemical cycling results in food contamination.

Ecotoxicity and Human Health Arthur D. Bloom, Frederick de Serres, 1995-10-09 Ecotoxicity and Human Health emphasizes the relationships between toxicity, ecological systems, and human health. It focuses on the extent and nature of hazardous waste sites and how their effects may be studied in humans and other systems using in vitro models, biomarkers of cellular and molecular damage, and animal models. It also includes considerable information on bioremediation, legal and regulatory issues, public perceptions, and societal responses, quantitative modeling and analysis, and international directives. One of the unique features of Ecotoxicity and Human Health is its coverage of the legislative actions that have occurred over the past two decades and which have most affected the issue of hazardous waste. The book discusses the Superfund Statute, the Resource Conservation and Recovery Act (RCRA), the Toxic Substances Control Act (TSCA), the Ocean Dumping Act of 1972, the Rio Conference, United Nations Declarations, EC Regulations and Directives, and selected state legislation.

Environmental Contaminants: Ecological Implications and Management Ram Naresh Bharagava, 2019-10-28 As we know, rapid industrialization is a serious concern in the context of a healthy environment. Various physico-chemical and biological approaches for the removal of toxic pollutants are available, but unfortunately, these are not very effective. Biological approaches using microorganisms (bacterial, fungi, algae, green plants) or their enzymes to degrade, detoxify, environmental contaminants such as endocrine-disrupting chemicals, toxic metals, pesticides, dyes, petroleum hydrocarbons, and phenolic compounds are eco-friendly and low cost. This book provides a much-needed comprehensive overview of the various types of contaminants, their toxicological effects on the environment, humans, animals, and plants, as well as various eco-friendly approaches for their management, degradation, detoxification. As such, it is a valuable resource for a wide range of
