Technologies and Management Strategies for Hazardous Waste Control United States. Congress. Office of Technology Assessment, 1983 **Risk Assessment and Risk**

Management R E Hester, R M Harrison, 2007-10-31 Risk assessment is considered by many analysts to be an objective scientific tool. It is considered to be variously influenced by broader issues which in turn have important practical implications both for risk assessors and decision makers. Risk Assessment and Risk Management examines a range of practical applications of risk assessment methods and risk management procedures in the broad context of environmental science and technology. Written by acknowledged experts in the field, the articles cover a variety of areas with reference to subjects as diverse as BSE, the use of risk assessment in government using computer modelling as an aid to risk assessment in the case of accidental contamination of rivers and estuaries, quantitative cancer risk assessment related to carcinogens in the environment, landfilling of household wastes, environmental risk assessment and management of chemicals and aquatic risk assessment and management of pesticides. This book provides a detailed and wide ranging review of the many aspects of risk assessment and risk management which have excited so much debate and controversy in recent times. It will be essential reading for all those involved in the assessment and management of risk particularly in the context of environmental science.

Handbook of Environmental Risk Assessment and Management Peter P. Calow, 2009-07-08 At the heart of environmental protection is risk assessment, the likelihood of pollution from accidents, the likelihood of problems from normal and abnormal operation of industrial processes, the likely impacts associated with new synthetic chemicals and so on. Currently, risk assessment has been very much in the news, the risks from BSE and E. coli and the public perception of risks from nuclear waste etc. This new publication explains how scientific methodologies are used to assess risk from human activities and the resultant effects on people and the environment. Understanding such risks supplies crucial information to frame legislation, manage major habitats, businesses and industries and create development programmes. Unique in combining the science of risk assessment with the development of management strategies. Covers science and social science, politics, economics, psychology aspects. Very timely, risk assessment lies at the heart of decision making in various topical environmental questions: BSE, BSE, Spar nuclear waste.
