oxidation soil washing etc These approaches are usually very expensive and can involve the removal of large amounts of soil or water which often leads to resources depletion and limitation in the future utilisation of the site Recently new decontamination approaches based on living organisms in particular micro organisms and plants have been researched and developed as a more sustainable alternative because they have lower costs reduced environmental impacts and increased public acceptance Development of biological decontamination techniques has been carried out in several laboratories and research institutions worldwide and practical applications on contaminated sites have been recorded in several countries In the USA and Canada several commercial companies have been utilizing these approaches for years alongside conventional techniques with great success a good examples can be found is in the U S Road Map to Understanding Innovative Technology Options for Brownfields Investigation and Cleanup, Third Edition, September 2001, (CD-ROM Included) ,2002
