Environmental Models Emissions And Consequences:

Uncertainties in Environmental Modelling and Consequences for Policy Making Philippe Baveye, Jaroslav Mysiak, Magdeline Laba, 2009-05-14 Mathematical modelling has become in recent years an essential tool for the prediction of environmental change and for the development of sustainable policies Yet many of the uncertainties associated with modelling efforts appear poorly understood by many especially by policy makers This book attempts for the first time to cover the full range of issues related to model uncertainties from the subjectivity of setting up a conceptual model of a given system all the way to communicating the nature of model uncertainties to non scientists and accounting for model uncertainties in policy decisions Theoretical chapters providing background information on specific steps in the modelling process and in the adoption of models by end users are complemented by illustrative case studies dealing with soils and global climate change All the chapters are authored by recognized experts in their respective disciplines and provide a timely and uniquely comprehensive coverage of an important field

Environmental Models J. Fenhann, 1990 The aim of the conference was to bring together scientists economists and decision makers having a mutual interest in the planning of emission reductions and the alleviation of pollution damage to the environment The emissions dealt with were all substances directly harmful to the environment plants animals and human beings Of special interest was quantification of the environmental consequences of pollution Environmental research institutes environmental agencies universities and consulting firms should have this book on their shelves

Advanced Modelling Techniques Studying Global Changes in Environmental Sciences

,2015-10-08 Advanced Modelling Techniques Studying Global Changes in Environmental Sciences discusses the need for immediate and effective action guided by a scientific understanding of ecosystem function to alleviate current pressures on the environment Research especially in Ecological Modeling is crucial to support the sustainable development paradigm in which the economy society and the environment are integrated and positively reinforce each other Content from this book is drawn from the 2013 conference of the International Society for Ecological Modeling ISEM an important and active research community contributing to this arena Some progress towards gaining a better understanding of the processes of global change has been achieved but much more is needed This conference provides a forum to present current research using models to investigate actions towards mitigating and adapting to change Presents state of the art modeling techniques Drawn from the 2013 conference of the International Society for Ecological Modeling ISEM an important and active research community contributing to this arena Integrates knowledge of advanced modeling techniques in ecological and environmental sciences Describes new applications for sustainability

Environmental and Economic Impacts of Decarbonization Óscar Dejuán, Manfred Lenzen, Maria Ángeles Cadarso, 2017-07-31 On December 12th 2015 at the United Nations Conference on Climate Change held in Paris 195 countries adopted the first ever universal and legally binding climate deal They agreed to decarbonize the economy in order to hold the increase in the global average temperature to well below 2oC relative to the preindustrial levels Although each country is free to design its own strategy on mitigation and adaptation it will be bound to such strategy and is supposed to implement the bulk of the adjustments by 2050 Many questions arise from the Paris Agreement that points to a second Industrial Revolution What are the required changes in the structure of production and in the patterns of consumption What will be their impacts on emissions employment and international trade This book answers these questions from a variety of input output models able to compute the impacts on specific sectors and regions This volume has 17 chapters written by 52 co authors who are specialists in input output analysis and environmental sustainability They come from 24 universities research centers and international agencies all over the world sharing their commitments to explain important and complex ideas in a way that is understandable to the non experts and experts alike Environmental and Economic Impacts of Decarbonization is a very important read for those who study

Operations Research and Environmental

Management Carlo Carraro, Alain Haurie, 2012-12-06 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics ranging from economics to engineering from environmental management at the industry or regional level to basic mathematical modelling research It is the combination of the activities on these last two topics that led the Fondazione to organise with the University of Geneva a workshop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management In the recent past attention has often been devoted to global environmental issues in which the level of policy making is either international through multi country agreements on emission control or national when environmental policies are designed to control domestic pollution Many environmental problems however have a local or regional dimension Even when their dimension is global e g in the case of the greenhouse gas effect relevant decisions on emission control such as the adoption of energy saving utilities are taken at the local level In many countries the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources It is therefore important to analyze the way in which local or regional authorities optimise their environmental management

Modelling in Ecotoxicology S.E.

Jørgensen, 2013-10-22 Ecotoxicology is the science of toxic substances in the environment and their impact on living organisms Today we use many more chemicals in everyday life than we did 30 40 years ago Our knowledge of the fate and effect of such chemicals in the environment has not yet followed the rate of chemical innovation in spite of our expanding knowledge of ecotoxicology About 50 000 different chemicals are produced on an industrial scale but we have only sufficient data to evaluate the environmental consequences of a few per cent of these The need for ecotoxicological knowledge has never been more pronounced than it is today Even more resources must be allocated in this field in the near future if we are to be able to cope with the threat of more toxic chemical compounds in our environment This book outlines the state of the art of modelling the fate and effects of toxic substances in the environment Modelling in ecotoxicology differs from modelling

in other fields by the great lack of data The quality of the models is very dependent on the parameters used and as we do not have a wide knowledge of parameters in ecotoxicological processes good parameter estimation methods are crucial for ecotoxicological models A comprehensive review of available parameter estimation methods is therefore included in this volume Model examples and case studies have also been included to illustrate the difficulties and shortcomings in practical modelling

Fundamentals of Ecological Modelling S.E. Jorgensen, 2011-01-10 Fundamentals of Ecological Modelling Applications in Environmental Management and Research Fourth Edition provides a comprehensive discussion of the fundamental principles of ecological modeling The first two editions of this book published in 1986 and 1994 focused on the roots of the discipline the four main model types that dominated the field 30-40 years ago 1 dynamic biogeochemical models 2 population dynamic models 3 ecotoxicological models and 4 steady state biogeochemical and energy models The third edition focused on the mathematical formulations of ecological processes that are included in ecological models This fourth edition uses the four model types previously listed as the foundation and expands the latest model developments in spatial models structural dynamic models and individual based models As these seven types of models are very different and require different considerations in the model development phase a separate chapter is devoted to the development of each of the model types Throughout the text the examples given from the literature emphasize the application of models for environmental management and research Presents the most commonly used model types with a step by step outline of the modeling procedure used for each Shows readers through an illustrated example of how to use each model in research and management settings New edition is revised to include only essential theory with a focus on applications Includes case studies illustrations and exercises case study of an ecological problem with full illustration on how to solve the problem
