Environmental Policy And Developing Nations:

Ecological Policy and Politics in Developing Countries Uday Desai, 1998-04-16 Examines in depth the ecological problems policies and politics of ten major developing countries

Environmental Policy and Developing Nations Stuart S. Nagel, 2002 The twelve chapters in this work written by political scientists economists and environmental experts deal with environmental policy in the developing nations of Africa Asia East Europe and Latin America as well as the worldwide environment Part One discusses environmental policy analysis and presents information both on sources of pollution which include manufacturing agriculture and transportation and methods for dealing with pollution which encompass government structures incentives issues of privatization or contracting out and technological fixes The other five parts deal with the developing nations individually and discuss environmental policy as it relates to each one and the unique problems that each one faces

Environmental Information in Developing Nations Anna Da Soledada Vieira, 1985-07-23 Vieira focuses on the relationship between environmental pollution and socioeconomic underdevelopment and emphasizes the role information can play in the protection of the Third World environment She identifies the main governmental and nongovernmental institutions related to important aspects of the Third World environment pollution control sanitation public health and development and alternative technologies The Brazilian institutional panorama is analyzed and then compared with Mexican Indian and Egyptian systems in an effort to identify common points that might be applied to the Third World as a whole Finally she recommends the establishment of an informal international network of both nongovernmental institutions and individuals for the exchange of information considered important to the developing countries or pertinent to the environmental realities of the Third World Providing the core for such a network is an appendix listing organizations interested in the environment and development of the Third World

Implementation of Environmental Policies in Developing Countries Jose Puppim de Oliveira, 2008-02-28 Environmental policy implementation in developing countries faces a number of institutional obstacles Using the case of protected areas and tourism development in the state of Bahia in northeastern Brazil Jose Antonio Puppim de Oliveira explores how economic development interests tend to have a higher priority on most governments agendas in developing countries Government agencies often fail to implement environmental protection policies mainly because they lack political support have insufficient resources have underdeveloped institutional capacity and tend to overlook the importance of cooperation at the local level Puppim de Oliveira explains how this trend may be reversed by decentralizing policy implementation into the hands of development oriented agencies To make the process work central authorities should offer incentives to ensure increased attention to environmental protection objectives in the development process At the same time an independent body with oversight authority should be in place to prevent development agencies from neglecting environmental concerns

Environmental Law in Development N. Niessen, 2006-01-01 an important addition to the small but growing published literature on the development of environmental

law in developing countries It will be of interest to academics and those involved in law development in Indonesia and the other developing countries Jennifer Mohamed Katerere Journal of Environmental Law This book asks whether environmental law and policy in developed countries can be successfully transferred to developing countries It questions whether developing countries are indeed ready and able to implement new ideas from the developed world such as the integration of environmental law and use of market oriented instruments The authors draw insights from the case of Indonesia where they have experience of drafting environmental legislation and which is itself in the early stages of development Through these insights they seek to understand why environmental law that has been well developed in theory can in practice be difficult to monitor and adequately enforce Indeed a further question central to the book is why developing environmental law does not necessarily result in an efficient environmental policy Taking a comparative perspective and using a multi faceted methodology that draws on constitutional and administrative law human rights law criminal and liability law and international law as well as law and economics the authors conclude with an outline of some of the lessons that can be learnt by other jurisdictions seeking to develop environmental law Lawyers environmental engineers and social scientists involved in environmental law and policy in developing countries will find much to interest them in this book as will those concerned with development studies or with a particular interest in the case of Indonesia

Growing Pains Walter Wehrmeyer, Yacob Mulugetta, 2017-10-19 Environmental management is a global phenomenon embracing all businesses in all countries whether or not there already exists an organised response to managing environmental impacts Today there are gross inequalities between the world's richest and poorest nations in terms of income distribution consumption patterns access to resources and environmental impact Yet both the developed north and the developing south are committed at least in words to achieving sustainable development Public awareness of environmental issues in the North has been rising in recent years and further degradation is now largely minimized through more stringent regulatory regimes voluntary agreements and growing consumer and stakeholder pressure on corporations Still the north is continuing to lead an environmentally unsustainable lifestyle as environmental improvements are nullified by overall increases in consumption levels In the south a billion people still do not have access to the most basic needs Poor countries need to accelerate their consumption growth if they are to ensure that the lives of their people are enriched However with rapid economic growth and corresponding increases in consumption now under way their environmental impact is soon to become substantially greater In a world that strives towards stemming global crises such as climate change the path already taken by the rich and high growth economies over the past century cannot be repeated by the south if the desired objective is to create a future that is truly sustainable Growing Pains examines environmental management in the south from a number of perspectives It is designed to stimulate the discussion about the role that corporations and national and international organizations play in sustainable development It does not offer panaceas as each country has its own problems and opportunities and after almost 50 years of failed

panacea oriented economic development policy transfer from the north to the south it is time to abandon hope for universal solutions and instead look to individual approaches that work The book is divided into five themes globalization the role of business a focus on national strategies trade and the environment and the organizational and structural challenges of sustainable development With contributions from an outstanding collection of authors in both the developed and developing worlds including UNIDO the Thailand Environment Institute Arthur D Little Inc Shell Peru IUCN the Russian Academy of Sciences and IIED this important and unique new book presents a body of work that will provide essential reading for businesses working in developing countries environmental and developmental NGOs and researchers engaged in the debate and sharing of best practice in this increasingly critical subject area Environment and Industry in Developing Countries Ralph Andrew Luken, Frank Van Rompaey, 2007-01-01 This impressive study compares the adoption of environmentally sound technology in industrial sectors in eight developing countries In combining a variety of quantitative and qualitative methodologies on rich empirical data the authors open the technological change black box and are able to formulate clear conclusions on the drivers and barriers for technological change A major contribution to better understanding and governing environmentally sound technological change Arthur P J Mol Wageningen University The Netherlands All theory is gray but the golden tree of life springs ever green says Goethe This book is very green that is empirical about a green topic the adoption of environmentally sound technologies in developing countries using triangulation for assessing the factors behind such choices A very nice study on an important topic Ren Kemp UNU MERIT Maastricht The Netherlands Industries located in developing countries have made major improvements in environmental performance since the Rio Earth Summit of 1992 More specifically their record in reducing energy use and water pollutant intensities has been better than developed countries This significant new book investigates what motivates industries in developing countries to adopt environmentally sound technology EST a subject about which very little is actually known The authors present the findings of a United Nations study of the factors that determined EST adoption by 105 manufacturing plants in four different sectors within eight developing countries They explore both factors internal to the plants as well as external factors including governments markets and civil society Environment and Industry in Developing Countries will be of great interest to development assistance agencies supporting programmes for industrial environmental management in developing countries and also to graduate school programmes in economic development technology management as well as in international business

Globalization, Political Institutions and the Environment in Developing Countries Gabriele Spilker, 2013 Though industrialized countries are usually the ones indicted when environmental pollution is discussed over the few last years the rate of emissions in developing countries has increased by a startling amount The fallout from this increase is evidenced by the struggle of cities like Beijing to improve their air quality Yet there also exist developing countries such as Thailand that have managed to limit their emissions to more tolerable levels raising the question why are some developing countries more willing or able to take care of their environment than others In this volume Gabriele Spilker proposes two factors for the differences in developing countries environmental performance integration into the international system and domestic political institutions Focusing on developing countries generally but also closely examining important global powers such as China and India Spilker employs a rigorous quantitative analysis to demonstrate the importance of considering various aspects of the international system in order to draw more comprehensive conclusions about how globalization affects environmental performance She asserts that democratic political institutions can shield developing countries from the negative consequences of either trade or foreign direct investment But at the same time developing countries by avoiding demanding commitments are more likely to use environmental treaties as a cover than as a real plan of action Adding a new dimension to the existing body of research on environmental quality and commitment Spilker convincingly demonstrates how international and domestic political factors interact to shape developing countries ability and willingness to care for their natural environment

Financing Environmental Measures in Developing Countries, the Principle of Additionality Scott MacLeod,1974

Valuing the Environment in Developing Countries David Pearce,Corin Pearce,Charles Palmer,2002-01-01

The substantial and growing interest in the monetary valuation of preferences for environmental improvement and against environmental damage has prompted a demand for case studies illustrating methodologies and applications of valuation techniques In this book the first of two volumes the authors provide detailed case studies of valuation techniques that have been used in developing countries They demonstrate that valuation works and that it can yield significant insights into policy relevant issues regarding conservation and economic development The authors address a whole range of environmental issues under the broad themes of water and air quality biological diversity and forest functions The economic approaches covered include contingent valuation hedonic property prices travel cost methodologies and benefits transfer They also go on to look at the idea of extending national accounts to reflect changes in environmental assets Examples of the varied and interesting case studies include valuing improvements to sanitation in Malaysia the value of visits to game parks in South Africa and tropical forest values in Mexico They highlight how valuation techniques can be applied often with limited resources to critical development issues Academics and practitioners of environmental economics will draw great value from this unique and original work as will the many multilateral and bilateral aid agencies The book will also prove a valuable addition to graduate and undergraduate courses in environmental economics where there is a need for case material
