Part I includes chapters dedicated to each dimension of sustainability: biophysical, economic, and social. Part II contains the specifics on the formulation and implementation of sustainable management practices, all grounded in the principles of organizational behavior, leadership, and business strategy. Nature's Holism Laurence Evans, 1999-08 In the association of the bee and the flower is a very advanced reflection of the process of evolution through natural selection. *Nature's Holism* explores the coevolution of long-associated species, arriving at a holistic view of nature where the compatibility between species is significant. In nature, there are two interacting forces. There is the numerical increase in numbers of a species, termed a force of perpetuity. Increasing numbers of a single species have an inevitable impact on the environment. However, as each species survives within an ecological context, there is a feedback from the ecosystem as numbers increase, requiring a necessary compatibility with the ecosystem. Fitness is therefore defined not only by quantitative representation of genes in the next generation, perpetuity, but also the qualitative condition of
