Environmental Software Systems Ralf Denzer, Gerald Schimak, D.W. Russell, 2013-06-05 Due to increasing practical needs software support of environmental protection and research tasks is growing in importance and scope Software systems help to monitor basic data to maintain and process relevant environmental information to analyze gathered information and to carry out decision processes which often have to take into account complex alternatives with various side effects Therefore software is an important tool for the environmental domain When the first software systems in the environmental domain grew 10 to 15 years ago users and developers were not really aware of the complexity these systems are carrying with themselves complexity with respect to entities tasks and procedures I guess nobody may have figured out at that time that the environmental domain would ask for solutions which information science would not be able to provide and in several cases can not provide until today Therefore environmental informatics as we call it today is also an important domain of computer science itself because practical solutions need to deal with very complex interdisciplinary distributed integrated sometimes badly defined user centered decision processes I doubt somebody will state that we are already capable of building such integrated systems for end users for reasonable cost on a broad range The development of the first scientific community for environmental informatics started around 1985 in Germany becoming a technical committee and working group of the German Computer Society in 1987

Environmental Software Systems Ralf Denzer, David A. Swayne, Gerald Schimak, 2016-03-24 Environmental Informatics is a fast growing field which deals with all methods from computer science environmental planning ecology and related subjects As well as being an interdisciplinary area Environmental Informatics provides an interface between all involved professional groups Monitoring the state of the environment analysing existing data presenting the data to scientists and the public as well as providing decision support are only some of the topics involved Environmental Informatics is therefore a good foundation for the computer assisted protection of the environment
