Mommsen, Peter W. Hochachka, 2012-12-02 This new series on The Biochemistry and Molecular Biology of Fishes grew out of the demand for state of the art review articles in a rapidly expanding field of research Up to the present most research literature on biochemistry involved rats and humans but new breakthroughs in the piscine setting have indicated that the field is ready for a review series of its own Because of funding and experimental availability restrictions most research in the field has dealt with fish and insects Within the insect field comparative biochemistry and comparative physiology have proceeded along independent paths as opposed to the piscine field where the tendency has been for the latter to envelop the former This volume sets out to make comparative biochemistry and comparative physiology independent of each other within

the piscine setting another important rationale for this review series as well as detailing the phylogenetic evolution of fishes The goal of the series is to provide researchers and students with an appropriate balance between experimental results and theoretical concepts Oceanography and Marine Biology R. Institution of Oceanography. Library,1980 Handbook of Chemical Mass Transport in the Environment Louis J. Thibodeaux,Donald Mackay,2010-10-21 A comprehensive account of the state of the science of environmental mass transport Edited by Louis J Thibodeaux and Donald Mackay renowned experts in this field the Handbook of Chemical Mass Transport in the Environment covers those processes which are critically important for assessing chemical fate exposure and risk In a comprehensive and authoritative format this unique handbook provides environmental chemists geoscientists engineers and

modelers with the essential capabilities to understand and quantify transport In addition it offers a one stop resource on environmental mass transfer and mass transport coefficient estimation methods for all genres The book begins by discussing mass transport fundamentals from an environmental perspective It introduces the concept of mobility key to environmental fate since transport must occur prior to any reaction or partitioning within the natural multimedia compartments The fugacity approach to environmental mass transfer and the conventional approach are examined This is followed by a description of the individual mass transport processes and the appropriate flux equations required for a quantitative expression The editors have identified 41 individual processes believed to be the most environmentally significant which form the basis for the remainder of the book Using a consistent format for easy reference each chapter Introduces the specific processes Provides a detailed qualitative description Presents key theoretical mathematical formulations Describes field or laboratory measurements of transport parameters Gives data tables and algorithms for numerical estimates Offers a guide for users familiar with the process who are seeking a direct pathway to obtain the numerical coefficients Presents computed example problems case studies and or exercises with worked through solutions and answers The final chapter presents the editors insight into future needs and emerging priorities Accessible and relevant to a broad range of science and engineering users this volume captures the state of the transport science and practice in this critical area
