Ecology And Conservation Of Wolves In A Changing World:

Ecology and Conservation of Wolves in a Changing World Ludwig N. Carbyn, Steven H. Fritts, Dale R. Seip, Canadian Circumpolar Institute, 1995 This book is a compilation of selected papers presented at the Second North American Symposium on Wolves held in Edmonton in August 1992 Innovations In GIS 5 Steve Carver, 2003-12-16 This text reflects the interdisciplinary nature of GIS research and includes coverage of such themes as virtual GIS spatial analysis artificial intelligence spatial agents and fuzzy systems and space time GIS and GIS applications **Colonial Mediascapes** Matthew Cohen, Jeffrey Glover, 2014-04-01 In colonial North and South America print was only one way of communicating Information in various forms flowed across the boundaries between indigenous groups and early imperial settlements Natives and newcomers made speeches exchanged gifts invented gestures and inscribed their intentions on paper bark skins and many other kinds of surfaces No one method of conveying meaning was privileged and written texts often relied on nonwritten modes of communication Colonial Mediascapes examines how textual and nontextual literatures interacted in colonial North and South America Extending the textual foundations of early American literary history the editors bring a wide range of media to the attention of scholars and show how struggles over modes of communication intersected with conflicts over religion politics race and gender This collection of essays by major historians anthropologists and literary scholars demonstrates that the European settlement of the Americas and European interaction with Native peoples were shaped just as much by communication challenges as by traditional concerns such as religion economics and resources

Southwestern Desert Resources William L. Halvorson, Cecil R. Schwalbe, Charles van Riper, 2023-01-10 The southwestern deserts stretch from southeastern California to west Texas and then south to central Mexico The landscape of this region is known as basin and range topography featuring to sky islands of forest rising from the desert lowlands which creates a uniquely diverse ecology The region is further complicated by an international border where governments have caused difficulties for many animal populations This book puts a spotlight on individual research projects which are specific examples of work being done in the area and when they are all brought together to shed a general light of understanding the biological and cultural resources of this vast region so that those same resources can be managed as effectively and efficiently as possible The intent is to show that collaborative efforts among federal state agency university and private sector researchers working with land managers provides better science and better management than when scientists and land managers work independently **Behavioural Responses to a Changing World** Bob B. M. Wong, Ulrika Candolin, 2025-04-23 For many animals behavioural adjustments represent the first response to human modified conditions By improving reproduction and survival such adjustments can play the lead in maintaining viable populations in the face of rapid environmental change Behavioural responses however can also be maladaptive and reduce individual fitness particularly if favourable reaction norms have not yet evolved because animals are encountering conditions that they have

never experienced before Clearly behaviour matters But how can we capitalise on our understanding of animal behaviour to improve conservation and management outcomes Behavioural Responses to a Changing World Challenges and Applications a companion volume to the first edition published in 2012 examines wildlife behavioural responses to human induced environmental change through a translational lens Despite considerable and growing interest in research on the topic the predictive value and practical application of what has been learned remains underappreciated and underutilized in the context of developing real world solutions To redress this the current book builds upon the foundations of the original volume but with a more applied perspective that focuses on highlighting how different forms of environmental challenges from climate change to urbanisation influence animal behaviour and how we can effectively harness knowledge of animal behaviour to effect practical solutions to predicting and mitigating the weighty impacts of a radically changed and changing world

A Research Strategy to Examine the Taxonomy of the Red Wolf National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Life Sciences, Committee on Assistance to the U.S. Fish and Wildlife Service on Taxonomic Studies of the Red Wolf: A Review of Applications to Carry Out Research and Development of a Research Strategy, 2021-01-29 A Research Strategy to Examine the Taxonomy of the Red Wolf provides independent guidance about taxonomic research on the red wolf *Canis rufus* Building from the 2019 report Evaluating the Taxonomic Status of the Mexican Gray Wolf and the Red Wolf this report reviews and ranks research applications to determine the taxonomy of wild canid populations in southern Louisiana and other relevant locations The report then develops a research strategy to examine the evolutionary relationships between ancient red wolves the extant managed red wolf populations and the unidentified canid populations

The Yellowstone Wolf Paul Schullery, 2003 All royalties from sales of this book go to Yellowstone's wolf recovery project Few animals inspire such a mixture of fear curiosity and wonder as the wolf Highly regarded but often misunderstood the wolf has as many friends as enemies and its reintroduction into Yellowstone National Park has sparked both fascination and controversy Early in Yellowstone's history wolves were thought supernaturally evil and scores were destroyed Northern Rocky Mountain wolves were native to Yellowstone when the park was established in 1872 but predator control led to determined eradication and by the 1940s they were gone Amid much fanfare however wolves were reintroduced to one of the nation's oldest national parks in the 1990s This comprehensive reference documents the prehistory management and nature of the Yellowstone wolf Historian naturalist Paul Schullery has assembled the voices of explorers naturalists park officials tourists lawmakers and modern researchers to tell the story of what may be the most famous wolf population in the world This unique book includes numerous scientific studies of interest to wolf enthusiasts and scholars of western wildlife issues conservation and national parks In a new afterword Schullery discusses recent developments in the recovery project

Mammals of Colorado, Second Edition David M. Armstrong, James P. Fitzgerald, Carron A. Meaney, 2011-05-18 Co published with the Denver Museum of Nature

Human-Wildlife Interactions Beatrice Frank, Jenny A. Glikman, Silvio Marchini, 2019-05-02 Presents solutions to turn conflict into tolerance and coexistence with an emphasis on the human dimensions of human wildlife interactions

Recent Mammals of Alaska Joseph A. Cook, Stephen O. MacDonald, 2010-03-15 From the polar bear and the gray wolf to the walrus and river otter there are 115 species of mammals in Alaska that have never been fully catalogued until now Biologists Joseph A Cook and Stephen O MacDonald have compiled here the first comprehensive guide to all of Alaska's mammals big and small endearing and ferocious Through extensive fieldwork and research the authors have produced a unique and authoritative reference Detailed entries for each species include distribution and taxonomic information status habitat and fossil history Appendices include quick reference listings of mammal distribution by region specimen locations conservation status and the incidence of Pleistocene mammals The guide is generously illustrated with line drawings by Alaskan artist W D Berry and includes several maps indicating populations and locations of species Mammals of Alaska will be an accessible easy to use source for scholars and hobbyists alike

The Biology and Conservation of Wild Canids David W. Macdonald, Claudio Sillero-Zubiri, 2004-06-24 No group of wild mammals so universally captures the emotions of people world wide than do wild canids That emotion can be enchantment and fascination but it can also be loathing because the opportunism that is the hallmark of the dog family also leads them into conflict with humans In the developed world at least the fascination with wild canids doubtless stems from people's captivation with domestic dogs everybody feels they are an expert on canids While most people may be familiar with only the better known members of the dog family such as the grey wolf and the red fox there are in fact 36 species of wolves dogs jackals and foxes They attract hugely disproportionate interest from academics conservationists veterinarians wildlife managers and the general public This book brings together in single volume an astonishing synthesis of research done in the last twenty years and is the first truly compendious synthesis on wild canids Beginning with a complete account of all 36 canid species there follow six review chapters that emphasise topics most relevant to canid conservation science including

evolution and systematics behavioural ecology population genetics diseases conflict control of troublesome species and conservation tools Fifteen detailed case studies then delve deeply into the very best species investigations currently available written by all the leading figures in the field Much of the material is previously unpublished and will make fascinating reading far beyond the confines of canid specialists These chapters portray the unique attributes of wild canids their fascinating and conflictive relationship with man and suggestions for future research and conservation measures for the Canidae While most canid species are widespread and thrive in human dominated landscapes several are in severe jeopardy habitat loss illegal hunting persecution by farmers and disease all imperil dwindling populations A final chapter analyses the requirements of and approaches to practical conservation with lessons that go far beyond the dog family It concentrates particular attention on priorities for the protection of the most threatened canid species including the red wolf African wild dog Ethiopian wolf Island fox and Darwin's fox The wild canids provide examples that will thrill the evolutionary biologists and theoretician enthral the natural historian and challenge the conservationist and wildlife manager Anybody interested in evolutionary and behavioural biology in mammals in the environment or in conservation will find much that is new and enriching in this book The Settlement of the American Continents C. Michael Barton, Geoffrey A. Clark, David R.

Yesner, Georges A. Pearson, 2016-03-04 When many scholars are asked about early human settlement in the Americas they might point to a handful of archaeological sites as evidence Yet the process was not a simple one and today there is no consistent argument favoring a particular scenario for the peopling of the New World This book approaches the human settlement of the Americas from a biogeographical perspective in order to provide a better understanding of the mechanisms and consequences of this unique event It considers many of the questions that continue to surround the peopling of the Western Hemisphere focusing not on sites dates and artifacts but rather on theories and models that attempt to explain how the colonization occurred Unlike other studies this book draws on a wide range of disciplines archaeology human genetics and osteology linguistics ethnology and ecology to present the big picture of this migration Its wide ranging content considers who the Pleistocene settlers were and where they came from their likely routes of migration and the ecological role of these pioneers and the consequences of colonization Comprehensive in both geographic and topical coverage the contributions include an explanation of how the first inhabitants could have spread across North America within several centuries the most comprehensive review of new mitochondrial DNA and Y chromosome data relating to the colonization and a critique of recent linguistic theories Although the authors lean toward a conservative rather than an extreme chronology this volume goes beyond the simplistic emphasis on dating that has dominated the debate so far to a concern with late Pleistocene forager adaptations and how foragers may have coped with a wide range of environmental and ecological factors It offers researchers in this exciting field the most complete summary of current knowledge and provides non specialists and general readers with new answers to the questions surrounding the origins of the first Americans *Tongass National*

Forest (N.F.), Tonka Timber Sale ,2011 *American Serengeti* Dan Flores,2017-01-16 America's Great Plains once possessed one of the grandest wildlife spectacles of the world equaled only by such places as the Serengeti the Masai Mara or the veld of South Africa Pronghorn antelope gray wolves bison coyotes wild horses and grizzly bears less than two hundred years ago these creatures existed in such abundance that John James Audubon was moved to write it is impossible to describe or even conceive the vast multitudes of these animals In a work that is at once a lyrical evocation of that lost splendor and a detailed natural history of these charismatic species of the historic Great Plains veteran naturalist and outdoorsman Dan Flores draws a vivid portrait of each of these animals in their glory and tells the harrowing story of what happened to them at the hands of market hunters and ranchers and ultimately a federal killing program in the nineteenth and twentieth centuries The Great Plains with its wildlife intact dazzled Americans and Europeans alike prompting numerous literary tributes American Serengeti takes its place alongside these celebratory works showing us the grazers and predators of the plains against the vast opalescent distances the blue mountains shimmering on the horizon the great rippling tracts of yellowed grasslands Far from the empty flyover country of recent times this landscape is alive with a complex ecology at least 20 000 years old a continental patrimony whose wonders may not be entirely lost as recent efforts hold out hope of partial restoration of these historic species Written by an author who has done breakthrough work on the histories of several of these animals including bison wild horses and coyotes American Serengeti is as rigorous in its research as it is intimate in its sense of wonder the most deeply informed closely observed view we have of the Great Plains wild heritage Proceedings RMRS. ,1998
