Economics of Higher Education Robert K. Toutkoushian, Michael B. Paulsen, 2016-03-18 This book examines the many ways in which economic concepts theories and models can be used to examine issues in higher education The topics explored in the book include how students make college going decisions the payoffs to students and society from going to college markets for higher education services demand and supply in markets for higher education why and how state and federal governments intervene in higher education markets college and university revenues and expenditures how institutions use net pricing strategies and non price product differentiation strategies to pursue their goals and to compete in higher education markets as well as issues related to faculty labor markets The book is written for both economists and non economists who study higher education issues and provides readers with background information and thorough explanations and illustrations of key economic concepts In addition to reviewing the contributions economists have made to the study of higher education it also examines recent research in each of the major topical areas The book is policy focused and each chapter analyses how contemporary higher education policies affect the behaviour of students faculty and or institutions of higher education Toutkoushian and Paulsen attempted a daunting task to write a book on the economics of higher education for non economists that is also useful to economists A book that could be used for reference and as a textbook for higher education classes in economics finance and policy They accomplish this tough balancing act with stunning success in a large volume that will serve as the go to place for anyone interested in the history and current thinking on the economics of higher education William E Becker Jr Professor Emeritus of Economics Indiana University **The Changing Economic Value of Higher Education in Developed Economies** Richard Barry Freeman, 1981 This paper analyses the changing economic value of higher education in the major O E C D countries The first part of the study examines data on earnings by education or earnings in occupations composed of persons with different educational attainments A second part looks at unemployment rates and the occupations attained by college graduates Both the relative earnings data and the unemployment and occupational attainment data suggest that the heralded decline in the economic value of higher education in the U S is not a unique North American phenomenon but rather a general development throughout the developed world On the basis of evidence on elasticities of substitution and the observed growth in the supply of college graduates the paper suggests that the decline in the premium to the educated reflects movement along a reasonably well defined demand for graduates schedule due to the growth of the college and university systems of the various countries **The Economics of American**

Higher education finances lie at the crossroads in many Western countries Hence worldwide the most common approach to the need for increasing revenue was to use some form or forms of cost sharing or the shift of some of the higher educational per student costs from governments and taxpayers to parents and students This raises several important challenges to higher education systems First there is the political and social controversy associated with most forms of cost sharing particularly with tuition fees Secondly there are important issues in terms of the broad context of social policy such as the role of families and students and the relationship that the state establishes with each of them Third there is the comparison of alternative instruments of cost sharing and the direct and indirect effects of each of them notably in terms of educational equality Overall underlying cost sharing debates are fundamental questions about social choice individual opportunities and the role of government in society

Financing Higher Education Worldwide D. Bruce Johnstone,Pamela N. Marcucci,2010-06-07 Examines the universal phenomenon of cost sharing in higher education where financial responsibility shifts from governments and taxpayers to students and families Growing costs for education far outpace public revenue streams that once supported it Even with financial aid and scholarships defraying some of these costs students are responsible for a greater share of the cost of higher education Shows how economically diverse countries all face similar cost sharing challenges While cost sharing is both politically and ideologically debated it is imperative to implement it for the financial health of colleges and universities From publisher description
