Hill, 1987-10-22 **Insect Pests in Tropical Forestry** F. R. Wylie, M. R. Speight, 2012 Insects are major pests of both natural and plantation forests in the tropics This book is the first to provide a broad based international review of this subject at a level suitable for advanced students and practitioners It describes the ecology and biology of the insects with special reference to the economic damage they cause to trees All relevant control strategies are addressed It is suitable for students researchers and practitioners of forestry ecology pest management and entomology in tropical and subtropical countries **Journal of Tropical Veterinary Science**, 1911 Subject Heading List National Agricultural Library (U.S.), 1963 *Subject Heading List, Preliminary Edition* National Agricultural Library (U.S.), 1963 **Tropical Agriculture**, 1924 **Tropical Medicine in the Twentieth Century** Helen J. Power, 2012-11-12 First published in 1998 Despite the upsurge of interest in the history of tropical medicine international public health and the provision of health care in colonial and post colonial tropical countries no major text discusses the history of the academic discipline in the twentieth century In Britain the two Schools of Tropical Medicine opened within six months of each other in the final year of the nineteenth century They have played a pivotal role in developing tropical medicine as an academic discipline in postgraduate medicine with an active research profile The Schools also affected the development of health care in the tropical colonies They trained the Medical Officers of the Colonial Medical Service and the indigenous doctors whose training failed to include infectious endemic diseases and lacked an emphasis on community health The Schools also contributed to a body of knowledge applied by the colonial powers international agencies and independent nation states as part of their health care programmes Ultimately the Schools helped the developing world to establish its own priorities for health This volume charts the history of the Liverpool School of Tropical Medicine from 1898 to 1990 **The Making of a Tropical Disease** Randall M. Packard, 2021-07-13 A global history of malaria that traces the natural and social forces that have shaped its spread and made it deadly while limiting efforts to eliminate it Malaria sickens hundreds of millions of people and kills nearly a half a million each year Despite massive efforts to eradicate the disease it remains a major public health problem in poorer tropical regions But malaria has not always been concentrated in tropical areas How did malaria disappear from other regions and why does it persist in the tropics From Russia to Bengal to Palm Beach Randall M Packard's far ranging narrative shows how the history of malaria has been driven by the interplay of social

biological economic and environmental forces The shifting alignment of these forces has largely determined the social and geographical distribution of the disease including its initial global expansion its subsequent retreat to the tropics and its current persistence Packard argues that efforts to control and eliminate malaria have often ignored this reality relying on the use of biotechnologies to fight the disease Failure to address the forces driving malaria transmission have undermined past control efforts Describing major changes in both the epidemiology of malaria and efforts to control the disease the revised edition of this acclaimed history which was chosen as the 2008 End Malaria Awards Book of the Year in its original printing examines recent efforts to eradicate malaria following massive increases in funding and political commitment discusses the development of new malaria fighting biotechnologies including long lasting insecticide treated nets rapid diagnostic tests combination artemisinin therapies and genetically modified mosquitoes explores the efficacy of newly developed vaccines and explains why eliminating malaria will also require addressing the social forces that drive the disease and building health infrastructures that can identify and treat the last cases of malaria Authoritative fascinating and eye opening this short history of malaria concludes with policy recommendations for improving control strategies and saving lives

Osborne, 2014-03-24 The Emergence of Tropical Medicine in France examines the turbulent history of the ideas people and institutions of French colonial and tropical medicine from their early modern origins through World War I Until the 1890s colonial medicine was in essence naval medicine taught almost exclusively in a system of provincial medical schools built by the navy in the port cities of Brest Rochefort sur Mer Toulon and Bordeaux Michael A Osborne draws out this separate species of French medicine by examining the histories of these schools and other institutions in the regional and municipal contexts of port life Each site was imbued with its own distinct sensibilities regarding diet hygiene ethnicity and race all of which shaped medical knowledge and practice in complex and heretofore unrecognized ways Osborne argues that physicians formulated localized concepts of diseases according to specific climatic and meteorological conditions and assessed diagnosed and treated patients according to their ethnic and cultural origins He also demonstrates that regions more so than a coherent nation built the empire and specific medical concepts and practices Thus by considering tropical medicine s distinctive history Osborne brings to light a more comprehensive and nuanced view of French medicine medical geography and race theory all the while acknowledging the navy s crucial role in combating illness and investigating the racial dimensions of health
