Economic Policy for Growth Salim

Rashid,2000-05-31 Economic Development is but one facet of Human Development This forces us to ask how do humans develop Man is a social animal and the growth of our humanity requires various social institutions such as bureaucracy The paradox of capitalism is that it is a system ostensibly based on self interest yet wholly dependent on non market values for its success These non market values are shaped by two much neglected factors religion and ethnicity Economic Development is an applied field whatever it claims as a conclusion should be an applicable conclusion This requires attention to all those non economic factors which translate economic decisions into practice such as the forces of nationalism versus the pressures of such global powers as US foreign policy and the advice of the IMF IBRD Since policy is our goal theory whose intellectual basis is inaccessible to policy makers or which fails to have application should be minimized Mathematical models are best avoided and if they are to be used the burden of proof must be placed upon their proponents As insights about the market are limited neither by time nor space poor countries can learn from rich ones and vice versa It is most fruitful to focus on examples of success such as the East Asian economies They are the clearest illustration of the fact that rapid economic development is possible even to those who have suffered through imperialism and possess few natural resources but have their work and their determination intact One good example is enough

development Fu Lai (Tony) Yu,2023-09-04 This book is the first of its kind to use Austrian subjectivism to analyze issues in economic development Unlike scholars in mainstream neoclassical economics who explain economic development by quantitative growth models this book attempts to understand economic progress in human agency perspective In this approach human agency is placed at the centre of economic analysis This book begins with a review of the theories of economic development in the history of Austrian economics with the intention of extending the contributions of major Austrian economists to development economics After pointing out the weaknesses in the orthodox neoclassical approach to economic growth the book then puts forward a subjectivist methodology which integrates the contributions of Max Weber Alfred Schutz and Austrian Economists to interpret economic phenomena and policies This chapter also serves as a methodological foundation for arguments elaborated in subsequent chapters The rest of the book discusses important issues in economic development namely entrepreneurial process national capabilities innovation trade government transition and catching up strategies for firms in latecomer economies The book ends with concluding remarks and a proposal for a new

research agenda in economic development This book is well written free from mathematics and is highly readable It adds new insights not only in economics but also in management politics and social sciences It will be useful to scholars policy makers and students in economic development entrepreneurship theory of the firm management of innovation government policy economic sociology Austrian and evolutionary economics

Economic Development Clarence Zuvekas, 1979 *Quantifying the Impact of Financial Development on Economic Development* Jeremy Greenwood, 2010-10 How important is financial development for economic development A costly state verification model of financial intermediation is presented to address this question The model is calibrated to match facts about the U S economy such as intermediation spreads and the firm size distribution for the years 1974 and 2004 It is then used to study the international data using cross country interest rate spreads and per capita GDP The analysis suggests that a country like Uganda could increase its output by 140 to 180 percent if it could adopt the world s best practice in the financial sector Still this amounts to only 34 to 40 percent of the gap between Uganda s potential and actual output Charts and tables

Regional Economic Development in the United States United States. Economic Development Administration. Office of Policy Coordination, 1967 *Economic Development, Poverty, And Income Distribution* William Loehr, 2019-04-10 The increasing inequality and poverty that seem inevitably to accompany economic growth in developing countries have become more and more evident in recent years The search for development paths that lead to growth with equality all too difficult to find is now an area of central concern for development economists One result of their concern is this volume in which internationally known representatives of a range of disciplines address themselves to ways in which growth with equity might be successfully achieved The book begins with both empirical and theoretical background to the development issues involved and with an overview of the experience of the international development assistance community focuses on operational definitions of the poor that will permit analytical policy oriented research to lead to useful conclusions Specific concern is expressed for small business owners women peasants and recent migrants from rural to urban areas The basic question of course is what can be done about poverty and inequality includes suggestions for specific measures and provides a comprehensive comparison across a wide range of policy options The book does not solve the problem but it does point to directions that promise a reasonably high probability of success And throughout suggestions are made for the kind of interdisciplinary research required to raise that probability even further

Economic Development Fidelis Ezeala-Harrison, 1996-09-24 Economists are being asked to provide explanations and prescriptive policy for addressing the questions of chronic poverty and underdevelopment in the world Answers are needed not only for the questions of how and why these problems arise but also whether the problems can be prevented and how the problems can be approached This book is an exposition to the student the researcher and the practitioner in the field of economic development giving an approach from the basic rudiments to the advanced level and bridging the gap between the neoclassical models of growth and development and the modern structuralist approaches to the study and analyses of economic development
