Emerging zoonoses: eco-epidemiology, involved mechanisms and public health implications Rubén Bueno-Marí,A. Paulo Gouveia Almeida,Juan Carlos Navarro,2015-07-06 Zoonoses are currently considered as one of the most important threats for public health worldwide Zoonoses can be defined as any disease or infection that is naturally transmissible from vertebrate or invertebrate animals to humans and vice versa Approximately 75% of recently emerging infectious diseases affecting humans are diseases of animal origin approximately 60% of all human pathogens are zoonotic All types of potential pathogenic agents including viruses parasites bacteria and fungi can cause these zoonotic infections From the wide range of potential vectors of zoonoses insects are probably those of major significance due to their abundance high plasticity and adaptability to different kinds of pathogens high degrees of synanthropism in several groups and difficulties to apply effective programs of population control Although ticks flies cockroaches bugs and fleas are excellent insects capable to transmit viruses parasites and bacteria undoubtedly mosquitoes are the most important disease vectors Mosquito borne diseases like malaria dengue equine encephalitis West Nile Mayaro or Chikungunya are zoonoses with increasing incidence in last years in tropical and temperate countries Vertebrates can also transmit serious zoonoses highlighting the role of some carnivorous animals in rabies dissemination or the spread of rodent borne diseases in several rural and urban areas Moreover the significance of other food borne zoonoses such as taeniasis trichinellosis or toxoplasmosis may not been underestimated According to WHO FAO and OIE guidelines an emerging zoonotic disease can be defined as a zoonosis that is newly recognized or newly evolved or

that has occurred previously but shows an increase of incidence or expansion in geographical host or vector range There are many factors that can provoke or accelerate the emergence of zoonoses such as environmental changes habitat modifications variations of human and animal demography pathogens and vectors anomalous mobilization related with human practices and globalization deterioration of the strategies of vector control or changes in pathogen genetics To reduce public health risks from zoonoses is absolutely necessary to acquire an integrative perspective that includes the study of the complexity of interactions among humans animals and environment in order to be able to fight against these issues of primary interest for human health In any case although zoonoses represent significant public health threats many of them still remain as neglected diseases and consequently are not prioritized by some health international organisms *International Catalogue of Scientific Literature* ,1906 *Computerworld* ,1990-08-13 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network **Toxicological Assessment of Combined Chemicals in the Environment** De-Sheng Pei,Yiyun Liu,2025-01-28 Comprehensive resource covering toxicology fundamentals distribution of pollutants in the environment and research methodologies for toxicological assessment of chemical mixtures Toxicological Assessment of Combined Chemicals in the Environment offers an in depth exploration of various approaches and molecular mechanisms regarding how minor alterations in chemical mixtures can influence an organism s toxicity along with discussion of the challenges associated with assessing mixtures The first section of the book provides a concise introduction to the background and significance of combined toxicity Section two delves into the primary sources and enrichment mechanisms of different chemical mixtures elucidating the biological exposure pathways of these compounds Section three introduces both classical and emerging toxicological research models in detail Building on the descriptions of compound emission migration accumulation and transformation processes and the analysis of combined molecular toxicity in the preceding sections section four introduces computer mathematical modeling methods for hazard assessment of compound mixtures The final section details the challenges and future trends in this field Written by a highly qualified author and seasoned research contributor in the field Toxicological Assessment of Combined Chemicals in the Environment covers sample topics including The degradation oxidation absorption distribution biotransformation and excretion of various compounds in both the environment and in organisms A variety of cell models and in vivo research models of model organisms supplemented with case studies Combined molecular toxicity mechanisms of heavy metals pesticides persistent organic pollutants POPs and pharmaceutical and personal care products PPCPs Principal sources fate and mechanism of chemical mixtures in the environment as well as experimental designs and sampling strategies for combined toxicity studies based on concentrations Toxicological Assessment of Combined Chemicals in the Environment serves as a valuable reference for researchers students and
