Social Fairness and Economics Lance Taylor, Armon Rezai, Thomas Michl, 2013-02-11 This volume brings together papers inspired by the work of Duncan Foley an extraordinarily productive economist who has made seminal contributions to a wide variety of areas Foley s work cannot be easily classified but one thread that runs through it is a critical examination along both ethical and analytical lines of conventional neoclassical economic theory particularly involving general equilibrium theories of value and money Foley was a pioneer of complexity economics as well which adopts approaches to these questions drawn from natural sciences so the collection therefore has an interdisciplinary quality that will interest a wide variety of readers Some of the chapters are intellectual biographies that contextualize and identify Foley s contributions to Keynesian macroeconomics Marxian value theory and complexity theory in economics The topics covered include the economics of complexity the ethics of general equilibrium theory the economics of climate change applications of Keynesian Marxian and Ricardian political economy and money and financial crises The collection should be useful to scholars who work in various economic traditions critical of the currently dominant free market approach but it also speaks to scholars of critical theory in various disciplines beyond economics such as the mathematicians physicists and other natural scientists who are interested in understanding the complexity of social processes using their analytical frameworks This book should also appeal to graduate students in economics who are working in these traditions as well as scholars including current graduate students in orthodox programs who are dissatisfied with the current state of economic theory and would like to satisfy their intellectual curiosity by sampling the contributions of critical theorists

Scholars' Guide to Humanities and Social Sciences in the Soviet Union and the Baltic States Tigran Martirosyan, Silvia Maretti, S. Frederick Starr, 2019-11-21 In the years since the first edition of the Guide was published the research institutions of the academies of sciences of the

USSR and the republics have undergone several sometimes radical reorganizations and reaffiliations This guide to academy institutions supplies names addresses and historical research and organizational profiles for each institution with summary information on staffing current projects special facilities and libraries The end of the Cold War has brought with it many changes of attitude and policy in the political arena however nowhere has change been so emotionally charged as in the area of politically based emigration Refugee policy is the driving force behind many of today s headlines influencing both foreign and domestic policy In *Desperate Crossings* authors Norman L and Naomi Flink Zucker chronicle and analyze the phenomenon of mass escape that began with the Haitians but exploded into the American consciousness in the spring of 1980 with the Mariel boatlift and the subsequent mass exodus from Central America and was most recently manifested in the Haitian and Cuban exoduses of 1994 In a compelling and carefully documented narrative they identify the troika of interests foreign policy domestic pressures and costs that have controlled and determined the American response to refugees since before the Second World War continuing until today *Desperate Crossings* concludes by proposing a comprehensive and politically palatable approach to future refugee flows both in our hemisphere and for the world community at large including Europe and Asia The authors suggest how by changing the course of its refugee policies and programs the United States can better respond to both the needs of refugees and the demands of its citizens

Social Self-Organization Dirk Helbing, 2012-05-05 What are the principles that keep our society together This question is even more difficult to answer than the long standing question what are the forces that keep our world together However the social challenges of humanity in the 21st century ranging from the financial crises to the impacts of globalization require us to make fast progress in our understanding of how society works and how our future can be managed in a resilient and sustainable way This book can present only a few very first steps towards this ambitious goal However based on simple models of social interactions one can already gain some surprising insights into the social macro level outcomes and dynamics that is implied by individual micro level interactions Depending on the nature of these interactions they may imply the spontaneous formation of social conventions or the birth of social cooperation but also their sudden breakdown This can

end in deadly crowd disasters or tragedies of the commons such as financial crises or environmental destruction Furthermore we demonstrate that classical modeling approaches such as representative agent models do not provide a sufficient understanding of the self organization in social systems resulting from individual interactions The consideration of randomness spatial or network interdependencies and nonlinear feedback effects turns out to be crucial to get fundamental insights into how social patterns and dynamics emerge Given the explanation of sometimes counter intuitive phenomena resulting from these features and their combination our evolutionary modeling approach appears to be powerful and insightful The chapters of this book range from a discussion of the modeling strategy for socio economic systems over experimental issues up the right way of doing agent based modeling We furthermore discuss applications ranging from pedestrian and crowd dynamics over opinion formation coordination and cooperation up to conflict and also address the response to information issues of systemic risks in society and economics and new approaches to manage complexity in socio economic systems Selected parts of this book had been previously published in peer reviewed journals

Quantitative Sociodynamics Dirk Helbing, 2010-11-15 When I wrote the book Quantitative Sociodynamics it was an early attempt to make methods from statistical physics and complex systems theory fruitful for the modeling and understanding of social phenomena Unfortunately the first edition appeared at a quite prohibitive price This was one reason to make these chapters available again by a new edition The other reason is that in the meantime many of the methods discussed in this book are more and more used in a variety of different fields Among the ideas worked out in this book are 1 a statistical theory of binary social interactions a mathematical formulation of social field theory which is the basis of social 2 force models a microscopic foundation of evolutionary game theory based on what is known today as proportional imitation rule a stochastic treatment of interactions in evolutionary game theory and a model for the self organization of behavioral 3 conventions in a coordination game It therefore appeared reasonable to make this book available again but at a more affordable price To keep its original character the translation of this book which 1 D Helbing Interrelations between stochastic equations for systems with pair interactions PhysicaA 181 29 52 1992 D Helbing Boltzmann like and Boltzmann Fokker Planck equations as a foundation of behavioral models PhysicaA 196 546 573 1993 2 D Helbing Boltzmann like and Boltzmann Fokker Planck equations as a foundation of behavioral models PhysicaA 196 546 573 1993 D

Micro-Macro Links and Microfoundations in Sociology Vincent Buskens, Werner Raub, Marcel Van Assen, 2014-07-16 Micro Macro Links and Microfoundations in Sociology focuses on two main issues in sociology Firstly how macro conditions can explain macro outcomes mediated by actor behaviour at the micro level micro macro links Secondly how alternative micro models affect macro outcomes microfoundations The contributions reflect key features of micro macro modelling in sociology as well as recent progress in this field The chapters address core features of explanations of social phenomena using micro macro models the problem of cooperation heterogeneity of actors structural balance opinion formation segregation and problems of micro macro models that are based

on rational choice assumptions Moreover the contributions show how different research methods can be applied fruitfully such as laboratory experiments equilibrium analysis and agent based modelling As a result the book can be a guide for graduate students who want to develop their skills in building micro macro models In addition the book provides specialists of the different substantive research areas with up to date new developments in their research area This book was originally published as a special issue of Journal of Mathematical Sociology

Twenty-first-century capital Aleksander Buzgalin, Andrey Kolganov, 2021-11-30 How would Marx have understood twenty first century capitalism For Buzgalin and Kolganov the answer lies in a theoretical investigation of how and why the fundamental elements of capitalism commodities money and capital have changed since the publication of Marx's Capital more than 150 years ago Introducing the concepts of social creativity markets for simulacra and virtual fictitious capital Buzgalin and Kolganov offer a recovery and development of Marx's understanding of social transformations Twenty first century capitalism not only demonstrates Marxism's relevance to the core economic questions of our time and its superiority over neoclassical economics but it leads English language readers into the undiscovered country of Soviet and post Soviet critical Marxism How might modern Marxism respond to the contemporary challenges of the commodification of knowledge and information And can it arrive at something resembling a Capital for the twenty first century This accessible and comprehensive account is essential reading for those wanting to understand the problems of the modern economy

Evolutionary Economics Yuji Aruka, 2024-05-09 This textbook presents a new way to visualize or imagine the evolutionary architecture of economics to judge both its practical outcomes and its ultimate value Evolutionary

economics employs an Aristotelian architecture The cognitive value of this imagination H1 must be directly relevant to the evolutionary theory and practice of designing the architecture of the economic system Mainstream economics completely ignores design value in order to concentrate on the ideal Platonic vision of the economy The current system is no longer one that converges on a constant entity because the system is constantly evolving The advent of the digital economy is an indispensable next step and computational power and algorithmic rationality are increasingly dominating the economic system and complicating it In today's society neither fault nor malice matters in the algorithmic or human system There is little room left for the effective working of human reason Correspondingly the meanings of money exchange the market system auctions production consumption and the currency transaction system are poised to change In most cases there will be digital counterparts A smart contract tied together with DLT for example makes it possible to design an economically well behaved peer to peer P2P system which ranges from the micromarket to the international currency transaction system The introduction of this technology and its architectural design may suggest what a truly decentralized future entails This change may also bring about a new understanding of existing social consensus and practice Thus the implementation of these considerations naturally leads to a new style of chapter structuring in this book from the classical analytical approach to exploring computational methods and digital tools in many cases the problems presented in each chapter are combined with discussions of a respective computational method and its practical value

Symmetry And Complexity: The Spirit And Beauty Of Nonlinear Science Klaus Mainzer, 2005-06-10 Cosmic evolution leads from symmetry to complexity by symmetry breaking and phase transitions The emergence of new order and structure in nature and society is explained by physical chemical biological social and economic self organization according to the laws of nonlinear dynamics All these dynamical systems are considered computational systems processing information and entropy Are symmetry and complexity only useful models of science or are they universals of reality Symmetry and Complexity discusses the fascinating insights gained from natural social and computer sciences philosophy and the arts With many diagrams and pictures this book illustrates the spirit and beauty of nonlinear science In the complex world of globalization it strongly argues for unity in diversity

What Makes Clusters Competitive? Anil Hira, 2013-11-01 While global competitiveness is increasingly invoked as necessary for economic success stories there are few answers available about how it can be achieved or maintained The idea of stimulating industries to spur on economies is often proposed but industrial policy can be seen as a boondoggle of government spending and theorists of globalization are doubtful that such efforts can succeed in a world of fragmented supply chains What Makes Clusters Competitive tests fundamental theoretical hypotheses about what makes industries competitive in a globalized world by using the wine industries of several countries as case studies Extremadura Spain Tuscany Italy South Australia Chile and British Columbia Canada Taking into account historical and location specific characteristics and drawing out policy lessons for other regions that would like to promote their industries this volume demonstrates the value of applying cluster theory to

understand market forces while also describing the forces underlying the development of the wine industry in a range of different settings An excellent resource for those interested in what makes industries succeed or struggle What Makes Clusters Competitive offers guidance for policymakers and the private sector on how to promote local industries Contributors include David Aylward Alexis Bwenge Sara Daniele F J Mes as D az Christian Felzenstein Husam Gabreldar F Pulido Garc a Sarah Giest Elisa Giuliani Andy Hira Mike Howlett A F Pulido Moreno and Oriana Perrone **Chaos, Cnn, Memristors**
