Economics of water resources planning Leonard Douglas James,1970 **Water Resources Project Economics** Edward Kuiper,1971 **Water Resources Research Catalog** ,1966 *Current Issues in the Economics of Water Resource Management* P. Pashardes,T.M. Swanson,A. Xepapadeas,2013-04-17 The marginal price elasticities estimated by Martinez Espineira conforms to expectation The price specification that accounts for the changing proportion of water users in each block yields a higher elasticity 0.47 compared to the specification ignoring this feature of the data However this difference is not found to be statistically significant a result attributed to the low power of the test small sample size limiting the accuracy of estimates In conclusion the paper provides a theoretically correct price specification for demand functions under block pricing and aggregate data The empirical findings in the paper however are not conclusive and further empirical work using more data and alternative nonlinear demand functions is needed to show the practical implications of the arguments put forward by the Martinez Espineira's paper Static empirical consumer demand functions estimated with aggregate data are well known to suffer from serial correlation and other statistical problems associated with misspecified dynamics These dynamics arise because consumers do not react immediately to a change in prices due to their largely predetermined lifestyle In the case of demand for water for example current purchases can be largely predetermined due to commitments arising from past purchases such as swimming pools bathtubs dishwashing machines etc Muellbauer and Pashardes 1992 show that the autoregressive nature of consumer demand data can be captured in a theoretically consistent manner by incorporating intertemporal aspects of consumer behaviour in the model through habit formation and durability
