Seaweed Ecology and Physiology Christopher S. Lobban, Paul J. Harrison, 1994 A rewritten and re organised edition of *The Physiological Ecology of Seaweeds* 1985 *Seaweed Ecology and Physiology* surveys the broad literature but it is

not merely an update of the earlier book This book contains an introductory chapter reviewing seaweed morphology cytology and life histories The chapter on community level ecology now includes six guest essays by senior algal ecologists which conveys the excitement of phycological research The treatment of tropical seaweeds had been expanded reflecting the growing literature from tropical regions and the authors experiences in the tropics The final chapter on mariculture is much larger and includes a case study on how principles of physiological ecology were applied in developing the carrageenan industry Finally there is an appendix summarising the taxonomic position and nomenclature of the species mentioned in the book

Bibliography of Agriculture ,1990 **Wildlife Abstracts** ,1976 Evolution Mechanism and Control Method of Engineering Disasters Under Complex Environment Jianyong Han,Xiaoyu Bai,Zhongqiang Liu,Jae-Joon Song,Pengjiao Jia,2025-03-03 As the result of resource exploitation and underground space development the engineering disasters appear including landslides tunnel collapses earthquakes debris flow and urban facility failures which may lead to substantial economic damages and loss of lives The engineering challenges from the geotechnical engineering have attracted wide attention A large number of engineering disasters like water gushing sand inrush seepage damage gas leakage and gas explosion are triggered due to the complex environment such as high water or gas stress seepage effect and fluid solid interaction In order to control the engineering disaster the primary task to be solved is to reveal the engineering disaster initiation and evolution mechanism induced under complex environment

Emerging zoonoses: eco-epidemiology, involved mechanisms and public health implications Rubén Bueno-Marí,A. Paulo Gouveia Almeida,Juan Carlos Navarro,2015-07-06 Zoonoses are currently considered as one of the most important threats for public health worldwide Zoonoses can be defined as any disease or infection that is naturally transmissible from vertebrate or invertebrate animals to humans and vice versa Approximately 75% of recently emerging infectious diseases affecting humans are diseases of animal origin approximately 60% of all human pathogens are zoonotic All types of potential pathogenic agents including viruses parasites bacteria and fungi can cause these zoonotic infections From the wide range of potential vectors of zoonoses insects are probably those of major significance due to their abundance high plasticity and adaptability to different kinds of pathogens high degrees of synanthropism in several groups and difficulties to apply effective programs of population control Although ticks flies cockroaches bugs and fleas are excellent insects capable to transmit viruses parasites and bacteria undoubtedly mosquitoes are the most important disease vectors Mosquito borne diseases like malaria dengue equine encephalitis West Nile Mayaro or Chikungunya are zoonoses with increasing incidence in last years in tropical and temperate countries Vertebrates can also transmit serious zoonoses highlighting the role of some carnivorous animals in rabies dissemination or the spread of rodent borne diseases in several rural and urban areas Moreover the significance of other food borne zoonoses such as taeniasis trichinellosis or toxoplasmosis may not been underestimated According to WHO FAO and OIE guidelines an emerging zoonotic disease can be defined as a zoonosis that is newly recognized or newly evolved or

that has occurred previously but shows an increase of incidence or expansion in geographical host or vector range There are many factors that can provoke or accelerate the emergence of zoonoses such as environmental changes habitat modifications variations of human and animal demography pathogens and vectors anomalous mobilization related with human practices and globalization deterioration of the strategies of vector control or changes in pathogen genetics To reduce public health risks from zoonoses is absolutely necessary to acquire an integrative perspective that includes the study of the complexity of interactions among humans animals and environment in order to be able to fight against these issues of primary interest for human health In any case although zoonoses represent significant public health threats many of them still remain as neglected diseases and consequently are not prioritized by some health international organisms *International Catalogue of Scientific Literature* ,1906 *Computerworld* ,1990-08-13 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network

Toxicological Assessment of Combined Chemicals in the Environment De-Sheng Pei,Yiyun Liu,2025-01-28 Comprehensive resource covering toxicology fundamentals distribution of pollutants in the environment and research methodologies for toxicological assessment of chemical mixtures Toxicological Assessment of Combined Chemicals in the Environment offers an in depth exploration of various approaches and molecular mechanisms regarding how minor alterations in chemical mixtures can influence an organism s toxicity along with discussion of the challenges associated with assessing mixtures The first section of the book provides a concise introduction to the background and significance of combined toxicity Section two delves into the primary sources and enrichment mechanisms of different chemical mixtures elucidating the biological exposure pathways of these compounds Section three introduces both classical and emerging toxicological research models in detail Building on the descriptions of compound emission migration accumulation and transformation processes and the analysis of combined molecular toxicity in the preceding sections section four introduces computer mathematical modeling methods for hazard assessment of compound mixtures The final section details the challenges and future trends in this field Written by a highly qualified author and seasoned research contributor in the field Toxicological Assessment of Combined Chemicals in the Environment covers sample topics including The degradation oxidation absorption distribution biotransformation and excretion of various compounds in both the environment and in organisms A variety of cell models and in vivo research models of model organisms supplemented with case studies Combined molecular toxicity mechanisms of heavy metals pesticides persistent organic pollutants POPs and pharmaceutical and personal care products PPCPs Principal sources fate and mechanism of chemical mixtures in the environment as well as experimental designs and sampling strategies for combined toxicity studies based on concentrations Toxicological Assessment of Combined Chemicals in the Environment serves as a valuable reference for researchers students and

policymakers involved in environmental management and protection It is particularly relevant for toxicologists risk assessors and those engaged in the molecular modeling of toxic mixtures *Computerworld* ,1986-12-22 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld s award winning Web site Computerworld com twice monthly publication focused conference series and custom research form the hub of the world s largest global IT media network **British Psychological Journal** ,1992 **Multi-Level Bayesian Models for Environment Perception** Csaba Benedek,2022-04-18 This book deals with selected problems of machine perception using various 2D and 3D imaging sensors It proposes several new original methods and also provides a detailed state of the art overview of existing techniques for automated multi level interpretation of the observed static or dynamic environment To ensure a sound theoretical basis of the new models the surveys and algorithmic developments are performed in well established Bayesian frameworks Low level scene understanding functions are formulated as various image segmentation problems where the advantages of probabilistic inference techniques such as Markov Random Fields MRF or Mixed Markov Models are considered For the object level scene analysis the book mainly relies on the literature of Marked Point Process MPP approaches which consider strong geometric and prior interaction constraints in object population modeling In particular key developments are introduced in the spatial hierarchical decomposition of the observed scenarios and in the temporal extension of complex MRF and MPP models Apart from utilizing conventional optical sensors case studies are provided on passive radar ISAR and Lidar based Bayesian environment perception tasks It is shown via several experiments that the proposed contributions embedded into a strict mathematical toolkit can significantly improve the results in real world 2D 3D test images and videos for applications in video surveillance smart city monitoring autonomous driving remote sensing and optical industrial inspection *International Catalogue of Scientific Literature, 1901-1914* ,1906 International Symposium on World Ecological Design Fangtian Ying,Ran Wan,Qun Wu,2024-04-15 With the world facing increasingly serious global climate change and resource scarcity issues ecology and the environment have received much attention in recent years As a major factor in human activity design plays an important part in protecting the environment as does the role of digital technology in finding solutions to the pressing problems faced in this regard This book presents the proceedings of ISWED2023 the International Symposium on World Ecological Design held on 17 December 2023 in Guangzhou China Sponsored by the World Eco Design Conference a UN Consultative NGO the conference provides a platform for professionals and researchers from industry and academia to present and discuss recent advances in the field of ecological design This year the conference focused on the four topics of digital technology and health digital technology and transportation digital technology and energy and digital technology and the environment A total of 518 submissions on these topics were received for the conference of which 125 were accepted for presentation and publication here Providing a current overview of research and innovation in ecological design around the world the book will be of interest to all those
