

# TYPES OF ECONOMIC MODELS

## Empirical Models

Mathematical models are designed to be used with data.

01

## Visual Models

Pictures of an abstract economy- graphs with curves & lines that tell an economic story.

04

## Expectations-Enhanced Models

Incorporate economic expectations, such as inflationary expectations.

02

## Static & Dynamic Models

Most economic models are comparative static ones. Dynamic models incorporate time into their structure.

05

## Mathematical Models

Systems of simultaneous equations with an equal or greater number of economic variables.

03

## Simulation Models

Must be used with computers. They are fundamentally mathematical, but their mathematical complexity is transparent to the user.

*Analysing the Structure of Economic Models* J.P. Ancot, 2012-12-06 Understanding the structure of a large econometric model is rather like the art of winetasting or like the art of playing a musical instrument The quality of a wine results from a complex combination of various elements such as its colour which should be clear and crystalline its smell which can be decomposed into a general aroma and a variety of particular characteristics more or less persistent depending on the type and the age of the wine its taste of course which again is a complex system whose equilibrium and charm depend on the whole set of ingredients alcohol tannin glycerine sugar acidity Similarly a clarinetist's musicianship depends on the quality of his instrument on his embouchure fingering tonguing and

articulation techniques on his sense for rhythm phasing and tone colour However the enchantment produced by a Romanian Conti or by a brilliant performance of Brahms's F minor sonata for clarinet and piano arises from a process which is at the same time much simpler and much more complex than the straightforward juxtaposition of individual causal relations In recent years econometricians and macro economists have been challenged by the problem of keeping abreast with an ever increasing number of increasingly more complex large econometric models The necessity of developing systematic analytical tools to study the often implicit and hidden structure of these models has become more evident

*Cooperative Models in International Relations Research* Michael D. Intriligator, Urs Luterbacher, 2012-12-06 Cooperative Models in International Relations Michael D Intriligator and Urs Luterbacher Cooperation problems in international relations research have been associated with a variety of approaches Game theoretical and rational choice perspectives have been used extensively to analyze international conflict at a bilateral two actor level Problems of deterrence and conflict escalation and deterrence maintaining and conflict dilemma solving strategies have been studied with a variety of game theoretical constructs These range from two by two games in normal form Axelrod 1984 to sequential games It is obvious that the analysis of conflict solving strategies and metastrategies deals implicitly and some times explicitly with cooperation The emphasis on cooperation promoting strategies plays therefore an important role within rational choice analysis of two actor problems However problems of international cooperation have also been traditionally associated with literary and qualitative approaches This is especially true for studies carried out at a multilateral or systemic level of analysis The association between cooperation problems at the international level and the study of international organizations influenced by the international legal tradition have certainly contributed to this state of affairs The concept of international regime of cooperation Krasner 1983 which derives itself from legal studies has been developed entirely within the context of this literary
