based framework which is derived from system theoretical evolutionary and constitutional ethical considerations as well as from the newly developed adjustment model which has been constructed as a dynamic transformation approach A relationship between norm changes the new institutional framework of the economic system and the compatibility of the latter with changes of the remaining partial societal systems is recognised Rigidity factors in the system s flexibility to react as well as the adjustment of economic behaviour to structural changes are analysed The marginal product of system change is defined section 2 8 2

CO2 Abatement and Economic Structural Change in the European Internal Market Frank Hoster, Heinz Welsch, Christoph Böhringer, 2012-12-06 European environmental and energy policies are currently challenged by two mutually dependent issues CO2 abatement and the completion of the Internal Market for energy Both will lead to substantial structural changes in the energy supply industry and in the wider economy The purpose of this book is to analyze the interaction between CO2 abatement economic structural change and the completion of the European Internal Market This involves not only significant general equilibrium effects but also technological changes especially in the electricity supply sector The simulation results indicate that the effects of measures to reduce European CO2 emissions depend considerably on the structure of the electricity supply system
