*ECOOP '88 European Conference on Object-Oriented Programming* Stein Gjessing, Kristen Nygaard, 1988-07-19 The field of Object Oriented Programming OOP has attracted increasing attention during the last few years OOP is now recognized as an important tool for making better and more flexible information systems This book is the proceedings of the second European Conference on Object Oriented Programming ECOOP 88 that was held in Oslo Norway from August 15 to 17 1988 The objectives of ECOOP 88 were to present the best international work in the field of OOP to interested persons from industry and academia and to be a forum for the exchange of ideas and the growth of professional relationships Each of the 103 papers submitted was subject to a thorough refereeing process The 22 papers selected are collected in these proceedings together with one invited paper These 23 papers from 13 different countries comprise the currently best international work in the field of OOP The contents of the papers include areas such as Theory Languages Didactics Implementation Applications Concurrency and Databases The interest in object oriented programming is rapidly increasing especially within the areas of Concurrency and Databases With its 5 papers on concurrency and 7 papers on databases the proceedings contain important new material on these subjects This book is a must for persons who want to keep themselves up to date in the field of OOP

ECOOP '94 - Object-Oriented Programming Mario Tokoro, Remo Pareschi, 1994-06-15 This volume contains the proceedings of the 8th European Conference on Object Oriented Programming ECCOP 94 held in Bologna Italy in July 1994 ECOOP is the premier European event on object oriented programming and technology The 25 full refereed papers presented in the volume were selected from 161 submissions they are grouped in sessions on class design concurrency patterns declarative programming implementation specification dispatching and experience Together with the keynote speech Beyond Objects by Luc Steels Brussels and the invited paper Putting Objects to Work by Norbert A Streitz GMD IPSI Darmstadt they offer an exciting perspective on object oriented programming research and applications

**ECOOP '98 - Object-Oriented Programming** Eric Jul, 1998-07-08 This book constitutes the refereed proceedings of the 12th European Conference on Object Oriented Programming ECOOP 98 held in Brussels Belgium in July 1998 The book presents 24 revised full technical papers selected for inclusion from a total of 124 submissions also presented are two invited papers The papers are organized in topical sections on modelling ideas and experiences design patterns and frameworks language problems and solutions distributed memory systems reuse adaption and hardware support reflection extensible objects and types and mixins inheritance and type analysis complexity

**ECOOP '97 - Object-Oriented Programming** Mehmed Aksit, Satoshi Matsuoka, 1997-05-28 When do the Lebesgue Bochner function spaces contain a copy or a complemented copy of any of the classical sequence spaces This problem and the analogous one for vector valued continuous function spaces have attracted quite a lot of research activity in the last twenty five years The aim of this monograph is to give a detailed exposition of the answers to these questions providing a unified and self contained treatment It presents a

great number of results methods and techniques which are useful for any researcher in Banach spaces and in general in Functional Analysis This book is written at a graduate student level assuming the basics in Banach space theory CSL'88 Egon Börger,Hans Kleine Büning,Michael M. Richter,1989-09-06 This volume contains the papers which were presented at the second workshop Computer Science Logic held in Duisburg FRG October 3 7 1988 These proceedings cover a wide range of topics both from theoretical and applied areas of computer science More specifically the papers deal with problems arising at the border of logic and computer science e g in complexity data base theory logic programming artificial intelligence and concurrency The volume should be of interest to all logicians and computer scientists working in the above fields ,

Distributed and Parallel Database Object Management Elisa Bertino,Tamer Özsu,2012-12-06 Distributed and Parallel Database Object Management brings together in one place important contributions and state of the art research results in this rapidly advancing area of computer science Distributed and Parallel Database Object Management serves as an excellent reference providing insights into some of the most important issues in the field Rewriting Techniques and Applications

Nachum Dershowitz,1989 Rewriting has always played an important role in symbolic manipulation and automated deduction systems The theory of rewriting is an outgrowth of Combinatory Logic and the Lambda Calculus Applications cover broad areas in automated reasoning programming language design semantics and implementations and symbolic and algebraic manipulation The proceedings of the third International Conference on Rewriting Techniques and Applications contain 34 regular papers covering many diverse aspects of rewriting including equational logic decidability questions term rewriting congruence class rewriting string rewriting conditional rewriting graph rewriting functional and logic programming languages lazy and parallel implementations termination issues compilation techniques completion procedures unification and matching algorithms deductive and inductive theorem proving Gr bner bases and program synthesis It also contains 12 descriptions of implemented equational reasoning systems Anyone interested in the latest advances in this fast growing area should read this volume

**Object-Oriented and Mixed Programming Paradigms** Peter Wisskirchen,2012-12-06 The area of computer graphics is characterized by rapid evolution New techniques in hardware and software developments e g new rendering methods have led to new ap plications and broader acceptance of graphics in fields such as scientific visualization multi media applications computer aided design and virtual reality systems The evolving functionality and the growing complexity of graphics algorithms and sys tems make it more difficult for the application programmer to take full advantage of these systems Conventional programming methods are no longer suited to manage the increasing complexity so new programming paradigms and system architectures are re quired One important step in this direction is the introduction and use of object oriented methods Intuition tells us that visible graphical entities are objects and experience has indeed shown that object oriented software techniques are quite useful for graphics The expressiveness of object oriented languages compared to pure procedurallanguages gives the graphics application programmer much better support when transforming

his mental intentions into computer code Moreover object oriented software development is a well founded technology allowing software to be built from reusable and extensible components This book contains selected reviewed and thoroughly revised versions of papers submitted to and presented at the Fourth Eurographics Workshops on Object Oriented Graphics held on May 9-11 1994 in Sintra Portugal *Topological UML Modeling* Janis Osis,Uldis Donins,2017-06-16 Topological UML Modeling An Improved Approach for Domain Modeling and Software Development presents a specification for Topological UML that combines the formalism of the Topological Functioning Model TFM mathematical topology with a specified software analysis and design method The analysis of problem domain and design of desired solutions within software development processes has a major impact on the achieved result developed software While there are many tools and different techniques to create detailed specifications of the solution the proper analysis of problem domain functioning is ignored or covered insufficiently The design of object oriented software has been led for many years by the Unified Modeling Language UML an approved industry standard modeling notation for visualizing specifying constructing and documenting the artifacts of a software intensive system and this comprehensive book shines new light on the many advances in the field Presents an approach to formally define analyze and verify functionality of existing processes and desired processes to track incomplete or incorrect functional requirements Describes the path from functional and nonfunctional requirements specification to software design with step by step creation and transformation of diagrams and models with very early capturing of security requirements for software systems Defines all modeling constructs as extensions to UML thus creating a new UML profile which can be implemented in existing UML modeling tools and toolsets *Object-Oriented Technology: ECOOP 2000 Workshop Reader* Jacques Malenfant,Sabine Moisan,Ana Moreira,2003-06-26 This book documents the satellite events run around the 14th European Conference on Object Oriented Programming ECOOP 2000 in Cannes and Sophia Antipolis in June 2000 The book presents 18 high quality value adding workshop reports one panel transcription and 15 posters All in all the book offers a comprehensive and thought provoking snapshot of the current research in object orientation The wealth of information provided spans the whole range of object technology ranging from theoretical and foundational issues to applications in various domains *Component-Based Software Engineering* Ian Gorton,George T. Heinemann,Ivica Crnkovic,Heinz W. Schmidt,Judith A. Stafford,Clemens Szyperski,Kurt Wallnau,2006-06-20 This is the refereed proceedings of the 9th International Symposium on Component Based Software Engineering CBSE 2006 held in Vasterås Sweden in June/July 2006 The 22 revised full papers and 9 revised short papers presented cover issues concerned with the development of software intensive systems from reusable parts the development of reusable parts and system maintenance and improvement by means of component replacement and customization ECOOP 2006 - Object-Oriented Programming Dave Thomas,2006-09-26 This book constitutes the refereed proceedings of the 20th European Conference on Object Oriented Programming ECOOP 2006 held in Nantes France in July 2006 20 revised full papers together with 3

keynote papers were carefully reviewed and selected The papers are organized in topical sections on program query and persistence ownership and concurrency languages type theory types for object oriented languages tools and modularity 5 more papers celebrate the 20th anniversary of ECOOP

**Transactional Memory** Tim Harris, James R. Larus, Ravi Rajwar, 2010 The advent of multicore processors has renewed interest in the idea of incorporating transactions into the programming model used to write parallel programs This approach known as transactional memory offers an alternative and hopefully better way to coordinate concurrent threads The ACI atomicity consistency isolation properties of transactions provide a foundation to ensure that concurrent reads and writes of shared data do not produce inconsistent or incorrect results At a higher level a computation wrapped in a transaction executes atomically either it completes successfully and commits its result in its entirety or it aborts In addition isolation ensures the transaction produces the same result as if no other transactions were executing concurrently Although transactions are not a parallel programming panacea they shift much of the burden of synchronizing and coordinating parallel computations from a programmer to a compiler to a language runtime system or to hardware The challenge for the system implementers is to build an efficient transactional memory infrastructure This book presents an overview of the state of the art in the design and implementation of transactional memory systems as of early spring 2010

**Modular Specification and Verification of Object-Oriented Programs** Peter Müller, 2003-07-31 Software systems play an increasingly important role in modern societies Smart cards for personal identification e banking software controlled medical tools airbags in cars and autopilots for aircraft control are only some examples that illustrate how everyday life depends on the good behavior of software Consequently techniques and methods for the development of high quality dependable software systems are a central research topic in computer science A fundamental approach to this area is to use formal specification and verification Specification languages allow one to describe the crucial properties of software systems in an abstract mathematically precise and implementation independent way By formal verification one can then prove that an implementation really has the desired specified properties Although this formal methods approach has been a research topic for more than 30 years its practical success is still restricted to domains in which development costs are of minor importance Two aspects are crucial to widen the application area of formal methods Formal specification techniques have to be smoothly integrated into the software and program development process The techniques have to be applicable to reusable software components This way the quality gain can be exploited for more than one system thereby justifying the higher development costs Starting from these considerations Peter Muller has developed new techniques for the formal specification and verification of object oriented software The specification techniques are declarative and implementation independent They can be used for object oriented design and programming

**Invasive Software Composition** Uwe Aßmann, 2013-11-11 Over the past two decades software engineering has come a long way from object based to object oriented to component based design and development Invasive software composition is a new technique that unifies and extends recent software engineering concepts like generic programming aspect oriented development architecture systems or subject oriented development To improve reuse this new method regards software components as grayboxes and integrates them during composition Building on a minimal set of program transformations composition operator libraries can be developed that parameterize extend connect mediate and aspect weave components The book is centered around the JAVA language and the freely available demonstrator library COMPOST It provides a wealth of materials for researchers students and professional software architects alike

*ECOOP 2000 - Object-Oriented Programming* Elisa Bertino, 2003-06-26 Following a 13 year tradition of excellence the 14th ECOOP conference repeated the success of its predecessors This excellence is certainly due to the level of maturity that object oriented technology has reached which warrants its use as a key paradigm in any computerized system The principles of the object oriented paradigm and the features of systems languages tools and methodologies based on it are a source of research ideas and solutions to many in all areas of computer science ECOOP 2000 showed a thriving field characterized by success on the practical side and at the same time by continuous scientific growth Firmly established as a leading forum in the object oriented arena ECOOP 2000 received 109 high quality submissions After a thorough review process the program committee selected 20 papers which well reflect relevant trends in object oriented research object modeling type theory distribution and coordination advanced tools programming languages The program committee consisting of 31 distinguished researchers in object orientation met in Milan Italy to select the papers for inclusion in the technical program of the conference

Advanced Information Systems Engineering Klaus R. Dittrich, Andreas Geppert, Moira C. Norrie, 2003-05-15 Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering CAiSE 2001 was the 13th conference in this series and was held from 4th to 8th June 2001 in the resort of Interlaken located near the three famous Swiss mountains the Eiger Mönch and Jungfrau The first two days consisted of pre conference workshops and tutorials The workshop themes included requirements engineering evaluation of modeling methods data integration over the Web agent oriented information systems and the design and management of data warehouses Continuing the tradition of recent CAiSE conferences there was also a doctoral consortium The pre conference tutorials were on the themes of e business models and XML application development The main conference program included three invited speakers two tutorials and a panel

discussion in addition to presentations of the papers in these proceedings We also included a special practice and experience session to give presenters an opportunity to report on and discuss experiences and investigations on the use of methods and technologies in practice We extend our thanks to the members of the program committee and all other referees without whom such conferences would not be possible The program committee whose members came from 20 different countries selected 27 high quality research papers and 3 experience reports from a total of 97 submissions The topics of these papers span the wide range of topics relevant to information systems engineering from requirements and design through to implementation and operation of complex and dynamic systems
