[Landscape Ecology in Theory and Practice](#) Monica G. Turner, Robert H. Gardner, 2015-10-29 This work provides in depth analysis of the origins of landscape ecology and its close alignment with the understanding of scale, the causes of landscape pattern, and the interactions of spatial pattern with a variety of ecological processes. The text covers the quantitative approaches that are applied widely in landscape studies, with emphasis on their appropriate use and interpretation. The field of landscape ecology has grown rapidly during this period; its concepts and methods have matured, and the published literature has increased exponentially. Landscape research has enhanced understanding of the causes and consequences of spatial heterogeneity and how these vary with scale, and they have influenced the management of natural and human dominated landscapes. Landscape ecology is now considered mainstream, and the approaches are widely used in many branches of ecology and are applied not only in terrestrial settings but also in aquatic and marine systems. In response to these rapid developments, an updated edition of

Landscape Ecology in Theory and Practice provides a synthetic overview of landscape ecology including its development the methods and techniques that are employed the major questions addressed and the insights that have been gained

Principles of Terrestrial Ecosystem Ecology F Stuart Chapin III, Pamela A. Matson, Peter Vitousek, 2011-09-02 Ecosystem ecology regards living organisms including people and the elements of their environment as components of a single integrated system The comprehensive coverage in this textbook examines the central processes at work in terrestrial ecosystems including their freshwater components It traces the flow of energy water carbon and nutrients from their abiotic origins to their cycles through plants animals and decomposer organisms As well as detailing the processes themselves the book goes further to integrate them at various scales of magnitude those of the ecosystem the wider landscape and the globe It synthesizes recent advances in ecology with established and emerging ecosystem theory to offer a wide ranging survey of ecosystem patterns and processes in our terrestrial environment Featuring review questions at the end of each chapter suggestions for further reading and a glossary of ecological terms *Principles of Terrestrial Ecosystem Ecology* is a vitally relevant text suitable for study in all courses in ecosystem ecology Resource managers and researchers in many fields will welcome its thorough presentation of ecosystem essentials

Satellite Remote Sensing and the Management of Natural Resources Nathalie

Pettorelli,2019-05-16 The ability to anticipate the impacts of global environmental changes on natural resources is fundamental to designing appropriate and optimised adaptation and mitigation strategies However this requires the scientific community to have access to reliable large scale information on spatio temporal changes in the distribution of abiotic conditions and on the distribution structure composition and functioning of ecosystems Satellite remote sensing can provide access to some of this fundamental data by offering repeatable standardised and verifiable information that is directly relevant to the monitoring and management of our natural capital This book demonstrates how ecological knowledge and satellite based information can be effectively combined to address a wide array of current natural resource management needs By focusing on concrete applied examples in both the marine and terrestrial realms it will help pave the way for developing enhanced levels of collaboration between the ecological and remote sensing communities as well as shaping their future research directions Satellite Remote Sensing and the Management of Natural Resources is primarily aimed at ecologists and remote sensing specialists as well as policy makers and practitioners in the fields of conservation biology biodiversity monitoring and natural resource management

Ecology Research Progress Sebastián I. Muñoz,2007

The new book presents important recent research on ecology which is the study of the interrelationships between organisms and their environment including the biotic and abiotic components There are at least six kinds of ecology ecosystem physiological behavioural population and community specific topics include Acid Deposition Acid Rain Revisited Biodiversity Biocomplexity Carbon Sequestration in Soils Coral Reefs Ecosystem Services Environmental Justice Fire Ecology Floods Global Climate Change Hypoxia and Invasion

Linking Ecology and Ethics for a Changing World Ricardo Rozzi,S.T.A. Pickett,Clare

Palmer,Juan J. Armesto,J. Baird Callicott,2014-02-06 To comprehensively address the complexities of current socio ecological problems involved in global environmental change it is indispensible to achieve an integration of ecological understanding and ethical values Contemporary science proposes an inclusive ecosystem concept that recognizes humans as components Contemporary environmental ethics includes eco social justice and the realization that as important as biodiversity is cultural

diversity inter cultural inter institutional and international collaboration requiring a novel approach known as biocultural conservation Right action in confronting the challenges of the 21st century requires science and ethics to be seamlessly integrated This book resulted from the 14th Cary Conference that brought together leading scholars and practitioners in ecology and environmental philosophy to discuss core terminologies methods questions and practical frameworks for long term socio ecological research education and decision making
