## **Ecology And Social Behavior Of The Coati *Nasua Narica* On Barro Colorado:**

*Ecology and social behavior of the Coati, Nasua Narica on Barro Colorado Island Panama* John H. Kaufmann, 1962

*Ecology and Social Behavior of the Coati, Nasua Narica on Barro Colorado, Island Panama* ,1962      Tropical Forest

Ecology Egbert Giles Leigh Jr., 1999-03-04 In Tropical Forest Ecology Egbert G Leigh Jr one of the world s foremost tropical ecologists introduces readers to the tropical forest and describes the intricate web of interdependence among the great diversity of tropical plants and animals Focusing on the tropical forest of Barro Colorado Island Panama Leigh shows what Barro Colorado can tell us about other tropical forests and what tropical forests can tell us about Barro Colorado This book considers three essential questions for understanding the ecological organization of tropical forests How do they stay green with their abundance of herbivores Why do they have such a diversity of plants and animals And what role does mutualism play in the ecology of tropical forests Beautifully written and abundantly illustrated Tropical Forest Ecology will certainly appeal to a wide variety of scientists in the fields of evolution tropical biology botany zoology and natural history      *The Ecology and Social Behavior of the Coati, Nasua Narica, of Barro Colorado Island, Panama* John H. Kaufmann, 1961

*Carnivore Behavior, Ecology, and Evolution* John L. Gittleman, 2019-05-15 Because carnivores are at the top of the food chain their status is an important indicator of the health of the world ecosystem They are intensely interesting to zoologists and uniquely intriguing to the general public Devoted primarily to terrestrial carnivores this volume focuses on such themes as carnivore reintroduction programs and the ethics of studying carnivores drawing examples from a variety of species The need to evaluate new conceptual ideas and empirical data inspired this volume of *Carnivore Behavior Ecology and Evolution* a complement to the original book In the eight years since publication of the first volume conservation has emerged as a thematic imperative The study of carnivores has become even more important in raising and resolving crucial biological problems Differential rates of mortality in the giant panda and other endangered carnivores are now known to influence dispersal and life history patterns basic to these species survival Reintroduction efforts of the black footed ferret and the red wolf are establishing essential guidelines for preservation and management of endangered species Studies of the African lion and the dwarf mongoose illustrate the power of new genetic techniques of DNA fingerprinting for understanding the evolution of social behavior

**Social Behavior of Female Vertebrates** Samuel Wasser, 2012-12-02 *Social Behavior of Female Vertebrates* focuses on the evolution of reproductive behavior in female vertebrates ranging from fish to birds and humans including issues of mate choice and other factors underlying female attitudes toward males It also looks at the evolution of mating systems the co evolution of the sexes sex role reversal reproductive competition between females maternal behavior and how females enhance the investment received by their offspring from others It also considers other social behaviors that influence the nature of affiliative associations between females Organized into three parts encompassing 13 chapters this volume begins with an overview of behavioral biology and sources of variation in female

reproductive success It then discusses the establishment and maintenance of sex biases sex differences mediated by sexual selection constraints on female choice in the mottled sculpin mate choice by females in sexual selection of bird song and female manipulation of male avoidance of cuckoldry behavior in the ring dove The reader is also introduced to the evolution of polyandry in shorebirds reproductive strategies in human females social and health seeking behaviors of Taiwanese women female roles in cooperatively breeding acorn woodpeckers altruism in coati bands cooperation and reproductive competition among female African elephants mate choice in matrilineal macaque groups and reproductive competition and cooperation among female yellow baboons This book is a valuable resource for scientists and behavioral biologists as well as lay people whose interests span a variety of fields

**A Comparison of the Ecology and Behavior of Monkeys and Apes**

, Flora of Barro Colorado Island Thomas B. Croat, 1978 Florenwerke Panama

**Ecology and Behaviour of North American Black Bears** Roger A. Powell, John Wayne Zimmerman, David Erran Seaman, 1997 What main factors affect mammalian home range size and dynamics To what extent do constraints on home range characteristics vary between the sexes This book aims to address these issues by concentrating the authors expertise and experience in studies of home ranges in general and focusing on their studies of black bears of the Pisgah Forest North Carolina in particular The authors provide an overview of the black bears and methods for their study before discussing concepts of home range developing predictive habitat quality models addressing influences of food production on social organization and exploring the mating behaviour of male bears

**Social Behavior and Communication** P. Marler, 2013-03-09 Other books in this series focus on behavior at the individual level approached from the viewpoints of biochemistry anatomy physiology and psychology In this volume we show how the functioning nervous systems of interacting individuals are coordinated with the ultimate creation of complex social structures The intricacies of an individual's nervous system have been subject to intense inquiry and research at the chemical cellular and organ levels has made remarkable progress Work at the social level has been conducted somewhat independently by way of behavioral phenomena and communicative interactions With the emergence of a large body of information from neurobiology the beginnings of an integrated approach are possible New data on social functions are presented in the chapters to follow and the forward looking reader may wish to reflect on how they clarify understanding of interactions between two or more independent nervous systems The outcome is harmonious social structure and improvement in the inclusive fitness of group living individuals We believe that there is in prospect a new way of looking at social function that will ultimately increase our understanding of the highest and most complex levels of neurobiology The modern approach to the study of social behavior involves more than the recording of interactions between animals Each individual brings to the process of social interaction the implications of its prior genetic and experiential history

**Carnivore Ecology and Conservation** Luigi Boitani, Roger A. Powell, 2012-01-12 Provides concise yet authoritative descriptions of the most common techniques used to study wild carnivores and to conserve and manage their populations

within increasingly human dominated landscapes      **Behavior and Neurology of Lizards** Neil Greenberg, Paul D. MacLean, 1978      **Biology and Conservation of Musteloids** David Whyte Macdonald, Chris Newman, Lauren A. Harrington, 2017 This is the first specific coverage of musteloid conservation biology written and edited by world renowned specialists in the field      **A Manual of Mammalogy** Robert E. Martin, Ronald H. Pine, Anthony F. DeBlase, 2011-11-30 Refined in detail through three editions the manual's outstanding features include an explanation of keys and how to use them the inclusion of keys designed to identify by order or family extant mammals of the world special sections containing comments and suggestions on identification information on working with map coordinates and global positioning receivers coverage of the use of computer programs to get estimates of home range size and characteristics and ideas for locating reliable authoritative literature on mammals A section on techniques for studying mammals in the field and in the laboratory rounds out this student friendly learning tool Beautifully wrought illustrations and diagrams accurately portray visual details of mammal groups or characteristics that are unavailable to study in person Moreover well designed laboratory exercises provide opportunities to apply knowledge and master understanding      **Bobcat** Kevin Hansen, 2006-11-30 Bobcat Master of Survival tells the story of the most adaptable and resilient wild feline in the world While half the wild cat species worldwide are in danger the bobcat is thriving even expanding its range in North America Why are bobcats flourishing when so many other wild felines are advancing towards extinction The book explains how scientists apply the latest in wildlife research technology to probe this diminutive predator's habits and behavior The reader is invited inside the bobcat's world to see how they hunt kill prey raise their young coexist with humans and deftly navigate the endless obstacles to survival The bobcat is both the most studied and the most exploited wild feline in the world Millions have been killed for the fur trade They were the focus of major controversy in the 1970s that transformed international conservation of wild felines The book discusses how economics and politics play a far greater role in bobcat management and conservation than does science Bobcat is the most comprehensive and up to date book on the natural history and management of bobcats to appear in 40 years

Wildlife Review, 1963      *Mammals of the Neotropics, Volume 3* John F. Eisenberg, Kent H. Redford, 1989 This volume provides a survey and synthesis of current knowledge of the more than 650 species of land and marine mammals found in Ecuador Peru Bolivia and Brazil as well as information on the mammalian fossil record current biodiversity and biogeography of this region Chapters present up to date taxonomic information ecological and behavioral characteristics conservation status and distribution maps for most species Copyright Libri GmbH All rights reserved      **Primate Locomotion** Farish A. Jr. Jenkins, 2012-12-02 Primate Locomotion discusses researches on the concept of primate locomotion It is organized into 11 chapters that cover biomechanical principles which are the foundation of understanding of locomotor adaptations This book first gives an introduction to parallels and analogs between mammalian and mechanical structures It then describes the mechanisms of arboreal mammal locomotion as well as the behavioral observations and locomotor patterns of tree shrew The

jumping locomotion of *Galago alleni* and the role of wrist specialization in the locomotor evolution of the Hominoidea are also explained. The subsequent chapter discusses the relationship between the mechanical features of the scapula and shoulder region and the characteristics of locomotor behavior. A chapter also discusses the adaptive nature of postural behavior in quadrupedal primates represented by the New and Old World monkeys. Moreover, this book examines the morphological differences between living Insectivora, Carnivora, Primates and the relevant known fossils of Cretaceous and Early Tertiary Eutheria. This is to evaluate the origins, evolution and function of the Tarsus. Another chapter presents a functional analysis of most of the foot skeleton, primarily the Lemniformes. The concluding chapters deal with electromyographical studies on gorillas, the mechanics of knuckle walking, the theories on hominoid phylogeny and the locomotor adaptations in prosimians. This text is intended not only for researchers dealing with primate locomotion but equally for students and others who share an interest in mammals and locomotor adaptations.

Mammals of the Neotropics, Volume 2: The Southern Cone John F. Eisenberg, Kent H. Redford, 1989. *Mammals of the Neotropics* satisfies the need for a comprehensive up to date survey of existing knowledge of South America's terrestrial and marine mammals. No comparable account of South American mammals has ever been published in any language and this timely work will help encourage the research vital to conservation efforts. This second of a projected three volumes covers southern South America. The authors discuss the historical biogeography and contemporary habitats of the region and then provide individual accounts for nearly 360 indigenous species including information on size, appearance, ecology, behavior and life history. Range maps, line drawings and color plates supplement the text. To place the species accounts in a broader context, the authors consider the diversity of animals within each taxonomic group, examine the Neotropical species from a worldwide geographical perspective and review taxonomic questions and controversies. Two final chapters deal with the community ecology of mammals and the effects humans have had on the mammalian fauna of the southern cone.
