**Encyclopedia of Ecology** Brian D. Fath, 2018-08-23. The *Encyclopedia of Ecology* Second Edition Four Volume Set continues the acclaimed work of the previous edition published in 2008. It covers all scales of biological organization from organisms to populations to communities and ecosystems. Laboratory, field, simulation, modelling, and theoretical approaches are presented to show how living systems sustain structure and function in space and time. New areas of focus include micro and macro scales, molecular and genetic ecology, and global ecology. e.g. climate change, earth transformations, ecosystem services, and the food-water-energy nexus are included. In addition, new international experts in ecology contribute on a variety of topics. Offers the most broad-ranging and comprehensive resource available in the field of ecology. Provides foundational content and suggests further reading. Incorporates the expertise of over 500 outstanding investigators in the field of ecology, including top young scientists with both research and teaching experience. Includes multimedia resources such as an Interactive Map Viewer and links to a CSDMS Community Surface Dynamics Modeling System, an open-source platform for modelers to share and link models dealing with earth system processes.

Embracing Diversity in the Learning Sciences Yasmin B. Kafai, 2012-10-12. More than a decade has passed since the First International Conference of the Learning Sciences (ICLS) was held at Northwestern University in 1991. The conference has now become an established place for researchers to gather. The 2004 meeting is the first under the official sponsorship of the International Society of the Learning Sciences (ISLS). The theme of this conference is Embracing Diversity in the Learning Sciences. As a field, the learning sciences have always drawn from a diverse set of disciplines to study learning in an array of settings. Psychology, cognitive science, anthropology, and artificial intelligence have all contributed to the development of methodologies to study learning in schools, museums, and organizations. As the field grows, however, it increasingly recognizes the challenges to studying and changing learning environments across levels in complex social systems. This demands attention to new kinds of diversity in who, what, and how we study, and to the issues raised to develop coherent accounts of how learning occurs. Ranging from schools to families and across all levels of formal schooling from pre-school through higher education, this ideology can be supported in a multitude of social contexts. The papers in these conference proceedings respond to the call.
