Contemporary Economic Systems: a Comparative View Gary M. Pickersgill, Joyce E. Pickersgill, 1973 Examine and evaluate three alternative models of economic organization and apply them to a comparative analysis of real world economies

Economic Analysis of Institutions and Systems S. Pejovich, 2012-12-06 In the late 1980s the field of comparative economics and NATO faced a similar problem the threat of obsolescence A predictable reaction of those who had made major investments in both comparative economics and NATO was to look for a new job It was time to say comparative economic systems are dead long live comparative economic systems The purpose of this book is to redirect study of what we called comparative economic systems toward analysis of the development of institutions and the effects of alternative institutional arrangements on economic performance To that end the book internalizes into a theoretical framework 1 the effects of alternative property rights on the costs of transactions and incentives structures 2 the effects of the costs of transactions and incentives on economic behavior and 3 the evidence for refutable implications of those effects Analysis here focuses on the issues propositions and conclusions that lend themselves to the only known scientific test empirical verification Thus this book is not about what socialism or capitalism could have been should have been or should be Nor is it an ode to capitalism Its purpose is not to assert that capitalism is a better economic system than socialism The history of this century and the market for institutions have done that My purpose is to explain what is it that makes the institutions of capitalism better in terms of economic outcome than all other alternatives that have been tried since the beginning of recorded history

Comparative Economic Systems A. Zimbalist, 2012-12-06 3 edge methods and theory I turn now to some of my own reflections on this score Some Reflections My first proposition is that if we are interested in analyzing the performance and dynamic properties of the world s economies it is only at significant peril that comparative economists can overlook

noneconomic or political factors This is not to say that it is illegitimate to abstract from non economic factors for particular purposes rather such abstraction should occur only with cognizance of the influences being suppressed I have argued elsewhere that the analytical compromise in suppressing noneconomic variables is greater for the study of planned than for market economies 7 Borrowing from Polanyi 8 it is claimed that in market systems the economic sphere is disembedded from separate and not subordinate to the political social and cultural spheres while in planned systems the economic sphere is embedded in the noneconomic spheres To be sure market economies are strongly affected by political and cultural factors but planned economies have and often exercise the potential to let political goals dominate in making production allocational or distributional choices Indeed it is difficult in practice to separate out what are political and what are economic decisions in planned systems
