The Impact of International Trade and FDI on Economic Growth and Technological Change Patricia Hofmann, 2013-03-14 Economic globalisation and technological change are the two issues that concerned people in the past concern them today and will concern them in the future all over the world poor or rich Traditionally questions about allocative effects are asked What are the labour market implications Who loses Who wins What is the net aggregate welfare effect after an adjustment period However two points are rarely taken into consideration How do globalisation and technological change interact and what are the potential long run implications for economic growth This book addresses the interplay of these megatrends It asks how economic globalisation may affect innovation and technology of individual firms and eventually the growth prospects of countries Thereby it shows that protectionism not only harms static efficiency but might as well lead to dynamic losses The book provides a systematic overview of the theoretical underpinnings of the openness growth nexus and summarises the conceptual problems and important findings of the empirical analyses so far The theoretical insights are supported by two empirical studies the first dealing with the innovative behaviour and the within multinational technology transfer of Spanish firms that were acquired by foreign companies and the second analysing productivity growth rate implications from exporting for German manufacturing firms [Encyclopedia of Energy, Natural Resource, and Environmental Economics](#), 2013-03-29 Every decision about energy involves its price and cost The price of

gasoline and the cost of buying from foreign producers the price of nuclear and hydroelectricity and the costs to our ecosystems the price of electricity from coal fired plants and the cost to the atmosphere Giving life to inventions lifestyle changes geopolitical shifts and things in between energy economics is of high interest to Academia Corporations and Governments For economists energy economics is one of three subdisciplines which taken together compose an economic approach to the exploitation and preservation of natural resources energy economics which focuses on energy related subjects such as renewable energy hydropower nuclear power and the political economy of energy resource economics which covers subjects in land and water use such as mining fisheries agriculture and forests environmental economics which takes a broader view of natural resources through economic concepts such as risk valuation regulation and distribution Although the three are closely related they are not often presented as an integrated whole This Encyclopedia has done just that by unifying these fields into a high quality and unique overview The only reference work that codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government
