Emotion and Adaptation Richard S. Lazarus, 1994-06-09 In this landmark work Richard Lazarus one of the world's foremost authorities offers a comprehensive treatment of the psychology of emotion its role in adaptation and the issues that must be addressed to understand it The work provides a complete theory of emotional processes explaining how different emotions are elicited and expressed and how the emotional range of individuals develops over their lifetime The author's approach puts emotion in a central role as a complex patterned organic reaction to both daily events and long term efforts on the part of the individual to survive flourish and achieve In his view emotions cannot be divorced from other functions whether biological social or cognitive and express the intimate personal meaning of what individuals experience As coping and adapting processes they are seen as part of the ongoing effort to monitor changes stimuli and stresses arising from the environment After defining emotion and discussing issues of classification and measurement Lazarus turns to the topics of motivation cognition and causality as key concepts in this theory Next he looks at individual emotions both negative and positive and examines their development in terms of social influences and individual events Finally he considers the long term consequences of emotion on physical health and well being and the treatment and prevention of emotional dysfunction The book draws together the relevant research from a wide variety of sources and distills the author's pioneering work in the field over the last forty years As a comprehensive treatment of the emotions the book will interest students clinicians and researchers involved in personality social and clinical psychology as well as cognitive and developmental psychology It may also be used as a supplemental textbook in courses on the psychology of adjustment emotion and feeling

Embodiment and Experience Thomas J. Csordas,1994-11-17 Students of culture have been increasingly concerned with the ways in which cultural values are inscribed on the body These essays go beyond this passive construal of the body to a position in which embodiment is understood as the existential condition of cultural life From this standpoint embodiment is reducible neither to representations of the body to the body as an objectification of power to the body as a physical entity or biological organism nor to the body as an inalienable centre of individual consciousness This more sensate and dynamic view is applied by the contributors to a variety of topics including the expression of emotion the experience of pain ritual healing dietary customs and political violence Their purpose is to contribute to a phenomenological theory of culture and self an anthropology that is not merely about the body but from the body
