Monthly Bulletin ,1919 An Anthropological Guide to the Art and Philosophy of Mirror Gazing Maria Danae

Koukouti,Lambros Malafouris,2020-09-03 Looking at one's face in the mirror and finding one's self in the mirror are not the same. The former capacity is something we share with other animals; the latter is a skill something we have to learn. What does it mean and what does it take to find oneself in the mirror? This book provides a comparative anthropological enquiry into the unity and diversity of mirror gazing. The reader is encouraged to reflect upon and experiment with different mirror gazes through a range of case studies. Koukouti and Malafouris weave together anthropology with philosophy and draw on examples from literature and experiments from psychopathology in a way that has never been attempted before. The master metaphor is that of the mirror as trap. Mirror gazing is viewed on a par with hunting. Mirroring signifies the hunt for self knowledge. In a time obsessed with the digital self image, Koukouti and Malafouris reflect on the structures of consciousness that underpin the different ways of looking at and through the mirror. Combining metaphor, comparison and estrangement, they gesture towards a therapeutic alliance between body and mirroring. This allows us to look in the mirror and think of our shared humanity differently.

Preparation of Charge Materials for ORNL Electromagnetic Isotope Separators C. W. Sheridan,H. R. Gwinn,L. O. Love,1962 **Statistics Explained** Steve McKillup,2011-11-03 An understanding of statistics and experimental design is essential for life science studies but many students lack a mathematical background and some even dread taking an introductory statistics course. Using a refreshingly clear and encouraging reader friendly approach, this book helps students understand how to choose, carry out, interpret and report the results of complex statistical analyses, critically evaluate the design of experiments and proceed to more advanced material. Taking a straightforward conceptual approach, it is specifically designed to foster understanding, demystify difficult concepts and encourage the unsure. Even complex topics are explained clearly using a pictorial approach with a minimum of formulae and terminology. Examples of tests included throughout are kept simple by using small data sets. In addition, end of chapter exercises new to this edition allow self testing. Handy diagnostic tables help students choose the right test for their work and remain a useful refresher tool for postgraduates.

Bias Temperature Instability for Devices and Circuits Tibor Grassner,2013-10-22 This book provides a single source reference to one of the more challenging reliability issues plaguing modern semiconductor technologies: negative bias temperature instability. Readers will benefit from state-of-the-art coverage of research in topics such as time dependent defect spectroscopy, anomalous defect behavior, stochastic modeling with additional metastable states, multiphonon theory, compact modeling with RC ladders and implications on device reliability and lifetime.
