BM/E ,1985 *Process Tomography* M S Beck,Williams,2012-12-02 Written by international experts in this field the

book describes the principles of and presents case studies for the wide range of tomographic imaging techniques that can be used in the process industries. It includes sufficient introductory material to this multi-disciplinary subject in order that readers from a variety of backgrounds will be able to fully understand the fundamental principles and features of the sensors and image reconstruction techniques needed for process tomography. Introduction to Computer Application (as per NEP-UP, for B.Com, Sem I) Ashok Arora, Broadcast Engineering, 1984 *Engineering Risk Assessment with Subset Simulation* Siu-Kui Au, Yu Wang, 2014-04-10 This book starts with the basic ideas in uncertainty propagation using Monte Carlo methods and the generation of random variables and stochastic processes for some common distributions encountered in engineering applications. It then introduces a class of powerful simulation techniques called Markov Chain Monte Carlo method MCMC an important machinery behind Subset Simulation that allows one to generate samples for investigating rare scenarios in a probabilistically consistent manner. The theory of Subset Simulation is then presented addressing related practical issues encountered in the actual implementation. The book also introduces the reader to probabilistic failure analysis and reliability based sensitivity analysis which are laid out in a context that can be efficiently tackled with Subset Simulation or Monte Carlo simulation in general. The book is supplemented with an Excel VBA code that provides a user friendly tool for the reader to gain hands on experience with Monte Carlo simulation. Presents a powerful simulation method called Subset Simulation for efficient engineering risk assessment and failure and sensitivity analysis. Illustrates examples with MS Excel spreadsheets allowing readers to gain hands on experience with Monte Carlo simulation. Covers theoretical fundamentals as well as advanced implementation issues. A companion website is available to include the developments of the software ideas. This book is essential reading for graduate students, researchers and engineers interested in applying Monte Carlo methods for risk assessment and reliability based design in various fields such as civil engineering, mechanical engineering, aerospace engineering, electrical engineering and nuclear engineering. Project managers, risk managers and financial engineers dealing with uncertainty effects may also find it useful. **Proceedings of the 2003 International Symposium on Performance Evaluation of Computer and Telecommunication Systems, July 20-24, 2003 Montreal, Quebec, Canada** Mohammad Salameh Obaidat, 2003. Issues for 2011 cataloged as a serial in LC *Nuclear Science Abstracts*, 1971-05 *Wireless World*, 1971 **Evolutionary Multi-Task Optimization** Liang Feng, Abhishek Gupta, Kay Chen Tan, Yew Soon Ong, 2023-03-29 A remarkable facet of the human brain is its ability to manage multiple tasks with apparent simultaneity. Knowledge learned from one task can then be used to enhance problem solving in other related tasks. In machine learning, the idea of leveraging relevant information across related tasks as inductive biases to enhance learning performance has attracted significant interest. In contrast, attempts to emulate the human brain's ability to generalize in optimization, particularly in population based evolutionary algorithms, have received little attention to date. Recently, a novel evolutionary search paradigm Evolutionary Multi Task EMT optimization has been proposed in the realm of evolutionary

computation In contrast to traditional evolutionary searches which solve a single task in a single run evolutionary multi tasking algorithm conducts searches concurrently on multiple search spaces corresponding to different tasks or optimization problems each possessing a unique function landscape By exploiting the latent synergies among distinct problems the superior search performance of EMT optimization in terms of solution quality and convergence speed has been demonstrated in a variety of continuous discrete and hybrid mixture of continuous and discrete tasks This book discusses the foundations and methodologies of developing evolutionary multi tasking algorithms for complex optimization including in domains characterized by factors such as multiple objectives of interest high dimensional search spaces and NP hardness
