Intestinal Tumorigenesis Vincent W. Yang,Agnieszka B. Bialkowska,2015-09-19 This volume includes the information necessary to understand recent critical advances in the mechanisms of intestinal tumorigenesis and to comprehend the complexity of the process The volume aims to entice new researchers to participate in relevant studies and to provide a forum for discussion within the scientific community to shape future research in this field Discoveries in intestinal tumorigenesis lead to further understanding of mechanisms involved in

colon cancer Additionally advancements in techniques and methods open the doors for new approaches to better define the molecular and organismal mechanisms of intestinal tumorigenesis Chapters are authored by widely published authorities in the field Each year there are close to 150 000 new cases of colorectal cancer which results in approximately 50 000 deaths per year in the United States these figures render colorectal cancer a significant health concern Studies attempting to understand the mechanisms of development and progression of colorectal cancer have been ongoing for decades and each year brings new discoveries yielding a better comprehension of the underlying processes at work Community College of the Air Force General Catalog Community College of the Air Force (U.S.),1978 Women in cancer metabolism: 2021/2022 Tuuli Käämbre,Atrayee Basu Mallick,2023-01-02 **Introduction to Mathematical Methods in Defense Analyses** J. pathways We hope that this book helps the readers to be interested in understanding why the CSC concept is important and attractive

RUNX Proteins in Development and Cancer Yoram Groner, Yoshiaki Ito, Paul Liu, James C. Neil, Nancy A. Speck, Andre van Wijnen, 2017-03-15 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes As highlighted in the introduction and several of the 29 chapters humans and other mammals have three RUNX genes that are known to play specific roles in blood bone and neuronal development However their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well known signaling pathways Wnt TGFb Notch Hippo is indicative of a more general function in cell biology Their documented roles in cell fate decisions include control of proliferation differentiation survival senescence and autophagy The pleiotropic effects of RUNX in development are mirrored in cancer where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes In the latter role they display hallmarks of both gatekeepers that modulate p53 responses and caretakers that protect the genome from DNA damage Several chapters focus on the importance of these genes in leukemia research where RUNX1 and CBFb are frequently affected by chromosomal translocations that generate fusion oncoproteins while recent studies suggest wider roles for RUNX modulation in solid cancers Moreover RUNX genes are intimately involved in the development and regulation of the immune system while emerging evidence suggests a role in innate immunity to infectious agents including HIV At the biochemical level the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis Not surprisingly RUNX activity is controlled at multiple levels this includes miRNAs and a plethora of post translational modifications Several chapters highlight the interplay between the three mammalian RUNX genes where cross talk and partial functional redundancies are evident Finally structural analysis of the RUNX CBFb interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy This volume provides a compendium and reference source that will be of broad interest to cancer researchers developmental biologists and immunologists
