Davenport, 2011-07-18 This book describes and explains the methods by which three related ores and recyclables are made into high purity metals and chemicals for materials processing It focuses on present day processes and future developments rather than historical processes Nickel cobalt and platinum group metals are key elements for materials processing They occur together in one book because they i map together on the periodic table ii occur together in many ores and iii are natural partners for further materials processing and materials manufacturing They all are for example important catalysts with platinum group metals being especially important for reducing car and truck emissions Stainless steels and CoNiFe airplane engine super alloys are examples of practical usage The product emphasises a

sequential building block approach to the subject gained through the author's previous writings particularly *Extractive Metallurgy of Copper* in four editions and extensive experience.
