Emissions Reduction A. Tomita, 2001-12-18 Over the past decade the topic of emissions reduction and control has remained an important area of research due to the enforcement of various Government policies in an attempt to minimize the impact on the environment One area in which a great deal of research has been conducted to address this policy is NOx SOx suppression However despite the progress that has been made over this time period further research into the most effective method of reducing NOx SOx emissions is still urgently required In developed countries a more stringent requirement in the level of emissions such as is NOx SOx component of less than 10ppm will be enforced in the near future Developing countries will also need a new technology that is effective and that is suited to each countries needs Additional research and development efforts are thus necessary to meet such requirements This compendium contains a collection of key papers themed around NOx SOx emissions from combustion of hydrocarbon resources and the attempts to secure an efficient and effective method for reducing these emissions These key papers are taken from the journals Fuel Fuel Processing Technology and Progress in Energy and Combustion Science *The John Zink Hamworthy Combustion Handbook* Charles E. Baukal, Jr., 2012-12-13 Despite the length of time it has been around its importance and vast amounts of research combustion is still far from being completely understood Environmental cost and fuel consumption issues add further complexity particularly in the process and power generation industries Dedicated to advancing the art and science of industrial combustion **The Slipcover for The John Zink Hamworthy Combustion Handbook** Charles E.
