Bargh, 2013-05-13

Evidence is mounting that we are not as in control of our judgments and behavior as we think we are Unconscious or automatic forms of psychological and behavioral processes are those of which we tend to be unaware that occur without our intention or consent yet influence us on a daily basis in profound ways Automatic processes influence our likes and dislikes for almost everything as well as how we perceive other people such as when we make stereotypic assumptions about someone based on their race or gender or social class Even more strikingly the latest research is showing that the aspects of life that are the richest experience and most important to us such as emotions and our close relationships as well as the pursuit of our important life tasks and goals also have substantial unconscious components Social Psychology and the Unconscious The Automaticity of Higher Mental Processes offers a state of the art review of the evidence and theory supporting the existence and the significance of automatic processes in our daily lives with chapters by the leading researchers in this field today across a spectrum of psychological phenomena from emotions and motivations to social judgment and behavior The volume provides an introduction and overview of these now central topics to graduate students and researchers in social psychology and a range of allied disciplines with an interest in human behavior and the unconscious such as cognitive psychology philosophy of mind political science and business *Developmental Social Neuroscience and*

Intelligent Systems and Applications Kohei Arai, Supriya Kapoor, Rahul Bhatia, 2020-08-25 The book *Intelligent Systems and Applications: Proceedings of the 2020 Intelligent Systems Conference* is a remarkable collection of chapters covering a wider range of topics in areas of intelligent systems and artificial intelligence and their applications to the real world. The Conference attracted a total of 545 submissions from many academic, pioneering researchers, scientists, industrial engineers, students from all around the world. These submissions underwent a double-blind peer review process. Of those 545 submissions, 177 submissions have been selected to be included in these proceedings. As intelligent systems continue to replace and sometimes outperform human intelligence in decision-making processes, they have enabled a larger number of problems to be tackled more effectively. This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for such an international conference, which serves as a venue to report on up-to-the-minute innovations and developments. This book collects both theory and application-based chapters on all aspects of artificial intelligence, from classical to intelligent scope. We hope that readers find the volume interesting and valuable; it provides the state-of-the-art intelligent methods and techniques for solving real-world problems along with a vision of the future research.
