Gold,A.L.C. Pottash,1986-01-31 **The Race Against Time** Robert A. Nemiroff,Calvin A. Colarusso,2013-11-21 This is the second book in the pioneering investigation of adult development by Robert A Nemiroff and Calvin A Colarusso The first Adult Development A New Dimension in Psychodynamic Theory and Practice arrived to critical acclaim in 1981 It presented a psychodynamic theory of development during the second half of life and a model of normal adult functioning This book is the logical sequel expanding and elaborating the original formulations and applying them to the clinical practice of psychotherapy and psychoanalysis Nemiroff and Colarusso demonstrate that these are appropriate techniques for patients in the second half of life regardless of age They lay to rest many stereotypes and myths that have long interfered with the dynamic treatment of older patients and they propose exciting new conceptualizations such as that of adult developmental arrests The genetic approach reaches beyond childhood and adolescence and takes on important new meaning by incorporating an adult developmental past that influences both psychopathology and transference The relationship between theory and therapy is richly demonstrated in the clinical presentations including ten detailed case histories of patients between the ages of 40 and 80 These and other clinical discussions provide ample evidence that a psychodynamic approach that is based on a sound adult developmental psychology can be extraordinarily effective They also demonstrate both the similarities and differences in working with older versus younger patients This work is a major contribution in a long neglected dimension of clinical psychiatry SHERWYN M

**Evaluation of the Psychiatric Patient** Seymour L. Halleck, 2013-11-09 A few months before the final manuscript of this book was sent to the publisher Dr Karl A Menninger died shortly before his ninety seventh birthday Thus when I sat down to write this preface he was very much on my mind I remembered that it had been almost forty years since he wrote A Manual for Psychiatric Case Study not one of his well known but probably the most practical of his books The psycho analytically trained part of me began to wonder what had motivated me to write a book on a topic so similar to that which had earlier drawn the attention of my revered teacher There is no pressing need for another book on psychiatric evaluation furthermore evaluation is a very difficult subject to write about in a straightforward way Whatever my unconscious motivations may have been I hope they were less significant than those of which I was aware I wrote this book mainly as part of an effort to reverse certain trends in psychiatric education In the last decade psychiatrists have increasingly been trained in an environment that emphasizes brief evaluation of patients and de emphasizes teaching about the complexity of human behavior and experience Trainees no longer study psychiatric evaluation in a systematic manner They take fewer intensive histories fill out forms instead of describing the patient s mental status and with rare exceptions are not taught how to conceptualize biological and

 Psychopathology and Violent Crime goes to the heart of this controversial and complex subject Dr Skodol presents the results of extensive epidemiologic samples and studies of criminal populations on the correlation between crime and mental disorder  
Deciphering Motivation in Psychotherapy David Mark Allen, 2012-12-06 I have often stated to students that I felt that one of the most important characteristics of a psychotherapist is the ability to tolerate ambiguity As Allen so aptly points out in this creative and valuable book my observation contains an implicit assumption that requires a clear statement in order for it to be understood Before ambiguity can be tolerated it must be recognized The psychotherapist who accepts the presentations of the patient at face value is never faced with the difficult problem of tolerating the ambiguity that is so intrinsic to the circumstances that bring many people to treatment In this volume Allen has undertaken the task of helping the reader to recognize ambiguity in all of its manifestations to understand it better and having understood it to help the patient to grow beyond it Ambiguity in Allen's view arises from a dialectical conflict whether it is between the self and the system intrapsychic and wholly within the self or social when the individual is torn between competing reference groups Psychotherapy is a process by which the dialectic can be brought to consciousness so that a synthesis can be achieved The dialectic that engages the individual and often is played out between the individual and the system parallels the struggle between attachment and individuation      *Clinical Disorders of Memory* Aman U. Khan, 2012-12-06 Memory is essential for the retention of learning In the presence of memory deficits new learning is impaired and performance of previously learned habits deteriorates What is the nature of memory Where does it reside in the brain What biological events are associated with the formation and retrieval of memory These questions are explored in the first chapter of this volume The answers are not final but we have learned a great deal about memory processes during the past few decades Memory is influenced by most of the pathological processes that influence the brain such as infection trauma cerebrovascular disorders and metabolic and degenerative diseases The nature and course of memory impairment are unique for each of the disorders and are

fairly distinguishable More than fifty conditions are known to cause dementia which now affects several million Americans In Alzheimer s disease memory disorder predominates for two to three years before other intellectual functions are affected Many neurological diseases such as Huntington s disease Friedreich s ataxia and multiple sclerosis are associated with progressive memory deficits Forgetting is a problem that becomes progressively worse with age Most individuals in their forties begin to experience some difficulty in quick recall of past events By age sixty definite changes are evident in the process of registration storage and recall of memory At this age the material that is to be remembered is processed more slowly stored less firmly and poorly recalled

Contemporary Perspectives on Psychotherapy with Lesbians and Gay Men  
Terry S. Stein, Carol J. Cohen, 2013-11-22 The psychiatric view of homosexuality has undergone a fascinating evolution in recent years This includes not only the change from viewing homosexuality as a diagnosable illness as opposed to an alternative life style but also the development of considerable professional concern for providing appropriate mental health services to this previously underserved minority community There has been an increasing recognition of the need for comprehensive services including but not limited to counseling individual psychotherapy and couples therapy This book is written for the practicing clinician and offers a comprehensive survey of the important clinical issues involved in the counseling and psychotherapy of gay men and lesbian women It is an extraordinarily practical book and its breadth and depth make it appropriate for both the novice and the experienced therapist

SHERWYN M WOODS Series Editor ix Preface We hear our mentors but do not often heed them Freud s supportive nonjudgmental approach to homosexuality provided an ambience within which discoveries could be made that is the discovery that homosexuality was not a disease of mental degeneration and that sexuality in the sense of a fundamental human propensity to find pleasure in social and physical attachments was at its root directed to both sexes The adherence to a nonjudgmental approach was short lived suffered repression by homophobic defenses and scientific zeal was directed toward cure rather than comprehension of the homosexual state
