Bitzinger, 2016-04-12 The proliferation of advanced militarily relevant technologies in the Asia Pacific over the past few decades has been a significant and perhaps even alarming development This volume addresses how such technologies may affect military capabilities and military advantage in the region *Emerging Technologies and International Security* Reuben Steff, Joe Burton, Simona R. Soare, 2020-11-25 This book offers a multidisciplinary analysis of emerging technologies and their impact on the new international security environment across three levels of analysis While recent technological developments such as Artificial Intelligence AI robotics and automation have the potential to transform international relations in positive ways they also pose challenges to peace and security and raise new ethical legal and political questions about the use of power and the role of humans in war and conflict This book makes a contribution to these debates by considering emerging technologies across three levels of analysis 1 the international system systemic level including the balance of power 2 the state and its role in international affairs and how these technologies are redefining and challenging the state s traditional roles and 3 the relationship between the state and society including how these technologies affect individuals and non state actors This provides specific insights at each of these levels and generates a better understanding of the connections between the international and the local when it comes to technological advance across time and space The chapters examine the implications of these technologies for the balance of power examining the

strategies of the US Russia and China to harness AI robotics and automation and how their militaries and private corporations are responding how smaller and less powerful states and non state actors are adjusting the political ethical and legal implications of AI and automation what these technologies mean for how war and power is understood and utilized in the 21st century and how these technologies diffuse power away from the state to society individuals and non state actors This volume will be of much interest to students of international security science and technology studies law philosophy and international relations

Emerging Technologies and International Stability Todd S. Sechser, Neil Narang, Caitlin Talmadge, 2021-11-28 Technology has always played a central role in international politics it shapes the ways states fight during wartime and compete during peacetime Today rapid advancements have contributed to a widespread sense that the world is again on the precipice of a new technological era Emerging technologies have inspired much speculative commentary but academic scholarship can improve the discussion with disciplined theory building and rigorous empirics This book aims to contribute to the debate by exploring the role of technology both military and non military in shaping international security Specifically the contributors to this edited volume aim to generate new theoretical insights into the relationship between technology and strategic stability test them with sound empirical methods and derive their implications for the coming technological age This book is very novel in its approach It covers a wide range of technologies both old and new rather than emphasizing a single technology Furthermore this volume looks at how new technologies might affect the broader dynamics of the international system rather than limiting the focus to a stability The contributions to this volume walk readers through the likely effects of emerging technologies at each phase of the conflict process The chapters begin with competition in peacetime move to deterrence and coercion and then explore the dynamics of
