Emerging Technologies for Nutrition Research Institute of Medicine, Committee on Military Nutrition Research, 1997-10-03 The latest of a series of publications based on workshops sponsored by the Committee on Military Nutrition Research this book's focus on emerging technologies for nutrition research arose from a concern among scientists at the U S Army Research Institute of Environmental Medicine that traditional nutrition research using standard techniques centered more on complex issues of the maintenance or enhancement of performance and might not be sufficiently substantive either to measure changes in performance or to predict the effects on performance of stresses soldiers commonly experience in operational environments The committee's task was to identify and evaluate new technologies to determine whether they could help resolve important issues in military nutrition research The book contains the committee's summary and recommendations as well as individually authored chapters based on presentations at a 1995 workshop Other chapters cover techniques of body composition assessment tracer techniques for the study of metabolism ambulatory techniques for the determination of energy expenditure molecular and cellular approaches to nutrition the assessment of immune function and functional and behavioral measures of nutritional status

Assessing Readiness in Military Women Institute of Medicine, Food and Nutrition Board, Committee on Body Composition, Nutrition, and Health of Military Women, 1998-01-01 U S military personnel are required to adhere to standards of body composition fitness and appearance to achieve and maintain readiness that is the maintenance of optimum health and performance so they are ready for deployment at any moment In 1992 the Committee on Military Nutrition Research reviewed the existing standards and found among other things that the standards for body composition required for women to achieve an appearance goal seemed to conflict with those necessary to ensure the ability to perform many types of military tasks This report addresses that conflict and reviews and makes recommendations about current policies governing body composition and fitness as well as postpartum return to duty standards Military Recommended Dietary Allowances and physical activity and nutritional practices of military women to determine their individual and collective impact on the health fitness and readiness of active duty women

Military Strategies for Sustainment of Nutrition and Immune Function in the Field Institute of Medicine, Committee on Military Nutrition Research, 1999-05-13 Every aspect of immune function and host defense is dependent upon a proper supply and balance of nutrients Severe malnutrition can cause significant alteration in immune response but even subclinical deficits may be associated with an impaired immune response and an increased risk of infection Infectious diseases have accounted for more off duty days during major wars than combat wounds or nonbattle injuries Combined stressors may reduce the normal ability of soldiers to resist pathogens increase their susceptibility to biological warfare agents and reduce the

effectiveness of vaccines intended to protect them There is also a concern with the inappropriate use of dietary supplements This book one of a series examines the impact of various types of stressors and the role of specific dietary nutrients in maintaining immune function of military personnel in the field It reviews the impact of compromised nutrition status on immune function the interaction of health exercise and stress both physical and psychological in immune function and the role of nutritional supplements and newer biotechnology methods reported to enhance immune function The first part of the book contains the committee s workshop summary and evaluation of ongoing research by Army scientists on immune status in special forces troops responses to the Army s questions conclusions and recommendations The rest of the book contains papers contributed by workshop speakers grouped under such broad topics as an introduction to what is known about immune function the assessment of immune function the effect of nutrition and the relation between the many and varied stresses encountered by military personnel and their effect on health
