**Coping with Uncertainty** Kurt Marti,Yuri Ermoliev,Marek Makowski,Georg Pflug,2006-11-23 Ongoing global changes pose fundamentally new scientific problems requiring new concepts and tools A key issue concerns a vast variety of practically irreducible uncertainties which challenge traditional models and require new concepts and analytical tools Uncertainty can dominate as in the climate change debates Increasing the resolution of models does not always yield sufficient certainty This book presents much needed new tools for modeling and management of uncertainty **Analytic Methods for Design Practice** Gyung-Jin Park,2007-05-31 In the competitive world of modern engineering rigorous and definite design methodologies are needed However many parts of engineering design are performed in either an ad hoc manner or based on the intuition of the engineer This is the first book to look at both stages of the design process conceptual design and detailed design and detail design methodologies for every step of the design process The following analytic design methodologies are introduced and their usefulness is explored with many mathematical and practical examples Axiomatic design Optimization Design of experiments Robust design Structural optimization Dynamic response optimization and Multidisciplinary optimization Case studies show how practical design problems can be solved with analytic design methods Students will find this book an excellent introduction to the subject The book s practical focus will interest practising engineers as a practical handbook of design **International Symposium on History of Machines and**

**MechanismsProceedings HMM 2000** Marco Ceccarelli,2013-11-11 The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM Theory of Machines and Mechanisms It was held at the University of Cassino Italy from 11 to 13 May 2000 The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community In fact most the authors of the contributed papers are experts in TMM and related topics This has been indeed a challenge convincing technical experts to go further in depth into the background of their topics of expertise We have received a very positive response as can be seen by the fact that these Proceedings contain contributions by authors

from all around the world We received about 50 papers and after review about 40 papers were accepted for both presentation and publishing in the Proceedings This means also that the History of TMM is of interest everywhere and indeed an in depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work historical or not These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM
