Arguments and Analysis in Bioethics, 2010-01-01 Is there any justification for the common practice of allocating expensive medical resources to rescue a few from rare diseases when those resources could be used to treat devastating diseases that affect the many Does the use of Prozac and other anti depressants make us inauthentic beings Is it immoral and irrational to have children What is the force of examples and counterexamples in bioethics What are the relevance of moral intuition and the role of empirical evidence in bioethical argument What notion of function underlies accounts of the distinction between normality and disease and between therapy and enhancement Is there an inherent conflict between research aimed at therapy and research aimed at gaining knowledge such that the very notion of therapeutic research is an oxymoron The twenty one chapters in this volume strive through the use of high quality argument and analysis to get a good deal clearer concerning a range of issues in bioethics and a range of issues about bioethics The essays are provocative indeed some quite radical and disturbing as they call into question many common methodological and substantive assumptions in bioethics

The Criminalization of European Cartel Enforcement Peter Whelan, 2014-08-07 Cartel activity is prohibited under EU law by virtue of Article 101 1 of the Treaty on the Functioning of the European Union Firms that violate this provision face severe punishment from those entities responsible for enforcing EU competition law the European Commission the national competition authorities and the national courts Stiff fines are regularly imposed on firms by these entities such firm focused punishment is an established feature of the antitrust enforcement landscape within the EU In recent years however focus has also been placed on the individuals within the firms responsible for the cartel activity It is increasingly recognized that punishment for cartel activity should be individual focused as well as firm focused Accordingly a growing tendency to criminalize cartel activity can be observed in the EU Member States The existence of such criminal sanctions within the EU presents a number of crucial challenges that need to be met if the underlying enforcement objectives are to be achieved in practice without violating prevailing legal norms For a start given the severe consequences of a custodial sentence the employment of criminal antitrust punishment must be justifiable in principle one must have a robust normative framework rationalizing the existence of criminal cartel sanctions Second for it to be legitimate antitrust criminalization should only occur in a manner that respects the mandatory legalities applicable to the European jurisdiction in question These include the due process rights of the accused and the principle of legal certainty Finally the correct practical measures such as a criminal leniency policy and a correctly defined criminal cartel offence need to be in place in order to ensure that the employment of criminal antitrust punishment actually achieves its aims while maintaining its legitimacy These three particular challenges can be conceptualized respectively as the theoretical legal and practical challenges of European antitrust criminalization This book analyses these three crucial challenges so that the complexity of the process of European antitrust criminalization can be understood more accurately In doing so this book acknowledges that the three challenges should not be considered in isolation In fact there is a dynamic relationship between the theoretical legal and practical challenges of European antitrust criminalization and an effective antitrust criminalization policy is one which recognizes and respects this complex interaction

Scepticism and Reliable Belief José L. Zalabardo, 2012-07-26 Reliabilist accounts of knowledge are widely seen as having the resources for blocking sceptical arguments since these arguments appear to rely on assumptions about the nature of knowledge that are rendered illegitimate by reliabilist accounts In *Scepticism and Reliable Belief* Jos L Zalabardo assesses the main arguments against the possibility of knowledge and challenges their consensus He articulates and defends a reliabilist theory of knowledge that belongs firmly in the truth tracking tradition Zalabardo's main analytic tool in the account of knowledge he provides is the theory of probability he analyses both truth tracking and evidence in these terms and argues that this account of knowledge has the resources for blocking the main standard lines of sceptical reasoning including the regress argument arguments based on sceptical hypotheses and the problem of the criterion But although Zalabardo's theory can be used to refute the standard lines of sceptical reasoning there is a sceptical argument against which his account offers no defence as it does not rely on any assumptions that he renders illegitimate According to this argument we might have considerable success in the enterprise of forming true beliefs if this is so we have knowledge of the world However we cannot know that we are successful even if we are Beliefs to this effect cannot be knowledge on Zalabardo's reliabilist account since these beliefs do not track the truth and we cannot obtain adequate evidence in their support Zalabardo ends with the suggestion that the problem might have a metaphysical solution although the sceptical argument may make no illegitimate epistemological assumptions it does rest on a questionable account of the nature of cognition
