Empty World:

The Vindication of Nothingness Marco Simionato, 2021-11-17 The philosophical question of nothingness has often been controversial The main core of the question is the use of nothing or nothingness as a noun phrase rather than a quantifier phrase This work deals with the question of nothingness and metaphysical nihilism in analytic philosophy After evaluating an account of nothingness based on the notion of an empty possible world the present work proposes two original arguments for metaphysical nihilism With a preface by Graham Priest Simionato's book delivers a welcome deepening of our understanding of nothing Graham Priest

The Problem of Existence Arthur Witherall, 2017-03-02 This book explores the question of why there is something instead of nothing Several responses to this question are possible but only some of them address the question seriously respecting its emotional aspects as well as its cognitive dimension The author carefully distinguishes those answers that are truly satisfactory in both respects from those that are inadequate It can be argued that the existence of the world has no explanation at all or that there is a necessary being whose existence is self explanatory or that the world exists because it has value Each kind of response is defensible to some degree and it is argued that where they are defensible they have a common content Incorporating aspects of both the analytical and continental traditions this book also responds to several historical philosophers concerned with these questions including Plato Leibniz Kant and Nietzsche

Metaphysics, Sophistry, and Illusion Mark Balaguer, 2021-01-26 *Metaphysics Sophistry and Illusion* does two things First it introduces a novel kind of non factualist view and argues that we should endorse views of this kind in connection with a wide class of metaphysical questions most notably the abstract object question and the composite object question More specifically Mark Balaguer argues that there's no fact of the matter whether there are any such things as abstract objects or composite objects or material objects of any other kind Second *Metaphysics Sophistry and Illusion* explains how these non factualist views fit into a general anti metaphysical view called neo positivism and explains how we could argue that neo positivism is true Neo positivism is the

view that every metaphysical question decomposes into some subquestions call them Q1 Q2 Q3 etc such that for each of these subquestions one of the following three anti metaphysical views is true of it non factualism or scientism or metaphysically innocent modal truthism These three views can be defined very roughly as follows non factualism about a question Q is the view that there is no fact of the matter about the answer to Q Scientism about Q is the view that Q is an ordinary empirical scientific question about some contingent aspect of physical reality and Q can't be settled with an a priori philosophical argument And metaphysically innocent modal truthism about Q is the view that Q asks about the truth value of a modal sentence that is metaphysically innocent in the sense that it doesn't say anything about reality and if it is true isn't made true by reality

The Incomplete Child Scot Danforth,2009 With the passage of Public Law 94 142 in 1975 the learning disability construct gained national legitimacy Feeding that political achievement behind the very idea of a learning disability was the development of a science that blended neurology psychology and education This book tracks the historical creation of the science of learning disabilities beginning with the clinical research with brain injured World War I soldiers conducted by German physician Kurt Goldstein It traces the growth of the two primary research traditions the psycholinguistic theory of Samuel Kirk and the movement education of Newell Kephart exploring how specific scientific orientations theories and practices led to the birth of the learning disability in the United States **What is this Thing Called Metaphysics?** Brian Garrett,2007-01-24 Why is there something rather than nothing Does God exist Who am I Metaphysics is concerned with ourselves and reality and the most fundamental questions regarding existence This clear and accessible introduction covers the central topics in Metaphysics in a concise but comprehensive way Brian Garrett discusses the crucial concepts in a highly readable manner easing the reader in with a look at some important philosophical problems He addresses key areas of metaphysics existence causation God time universals personal identity truth What is this thing called Metaphysics contains many helpful student friendly features Each chapter concludes with a useful summary of the main ideas discussed a glossary of important terms study questions annotated further reading and a guide to web resources Text boxes provide bite sized summaries of key concepts and major philosophers and clear and interesting examples are used throughout Autonomy Platonism and the Indispensability Argument Russell Marcus,2015-06-11 Mathematical platonism is the view that mathematical statements are true of real mathematical objects like numbers shapes and sets One central problem with platonism is that numbers shapes sets and the like are not perceivable by our senses In contemporary philosophy the most common defense of platonism uses what is known as the indispensability argument According to the indispensabilist we can

know about mathematics because mathematics is essential to science Platonism is among the most persistent philosophical views Our mathematical beliefs are among our most entrenched They have survived the demise of millennia of failed scientific theories Once established mathematical theories are rarely rejected and never for reasons of their inapplicability to empirical science

Autonomy Platonism and the Indispensability Argument is a defense of an alternative to indispensability platonism The autonomy platonist believes that mathematics is independent of empirical science there is purely mathematical evidence for purely mathematical theories which are even more compelling to believe than empirical science

Russell Marcus begins by contrasting autonomy platonism and indispensability platonism He then argues against a variety of indispensability arguments in the first half of the book In the latter half he defends a new approach to a traditional platonistic view one which includes appeals to a priori but fallible methods of belief acquisition including mathematical intuition and a natural adoption of ordinary mathematical methods In the end Marcus defends his intuition based autonomy platonism against charges that the autonomy of mathematics is viciously circular This book will be useful to researchers graduate students and advanced undergraduates with interests in the philosophy of mathematics or in the connection between science and mathematics

The Extent of Impossibility Martin Vacek, 2025-08-30 The book examines the notion of impossible worlds Although the notion of an impossible world is not novel several misunderstandings and misrepresentations have resulted in philosophical confusion To avoid such confusion the analysis here differentiates between the logical semantic epistemological and metaphysical roles of impossible worlds The book's central hypothesis is that an understandable taxonomy of extreme positions about impossible worlds is required it is not easy to hold the middle ground without taking the extreme positions seriously These positions are compared in order to draw important lessons for logic epistemology and metaphysics The Extent of Impossibility is essential reading for scholars in philosophy and especially for scholars and researchers focusing on metaphysics logic and epistemology

Worlds and Individuals, Possible and Otherwise Takashi Yagisawa, 2009-12-03 Modal realism says that non actual possible worlds and individuals are as real as the actual world and individuals Takashi Yagisawa defends modal realism of a variety different from David Lewis's theory The notion of reality is left primitive and sharply distinguished from

that of existence which is proposed as a relation between a thing and a domain Worlds are postulated as modal indices for truth on a par with times which are temporal indices for truth Ordinary individual objects are conceived as being extended in spatial temporal and modal dimensions and their transworld identity is explicated by the closest continuer theory Impossible worlds and individuals are postulated and used to provide accounts of propositions belief sentences and fictional discourse
