Families Torsion And Morse Functions Pb :

The Hypoelliptic Laplacian and Ray-Singer Metrics Jean-Michel Bismut, Gilles Lebeau, 2008-09-07 This book presents the analytic foundations to the theory of the hypoelliptic Laplacian The hypoelliptic Laplacian a second order operator acting on the cotangent bundle of a compact manifold is supposed to interpolate between the classical Laplacian and the geodesic flow Jean Michel Bismut and Gilles Lebeau establish the basic functional analytic properties of this operator which is also studied from the perspective of local index theory and analytic torsion The book shows that the hypoelliptic Laplacian provides a geometric version of the Fokker Planck equations The authors give the proper functional analytic setting in order to study this operator and develop a pseudodifferential calculus which provides estimates on the hypoelliptic Laplacian s resolvent When the deformation parameter tends to zero the hypoelliptic Laplacian converges to the standard Hodge Laplacian of the base by a collapsing argument in which the fibers of the cotangent bundle collapse to a point For the local index theory small time asymptotics for the supertrace of the associated heat kernel are obtained The Ray Singer analytic torsion of the hypoelliptic Laplacian as well as the associated Ray Singer metrics on the determinant of the cohomology are studied in an equivariant setting resulting in a key comparison formula between the elliptic and hypoelliptic analytic torsions

An Introduction to Morse Theory Yukio Matsumoto, 2002 This book introduces basic concepts related to finite dimensions including critical points the Hessian and handle decompositions It first uses surfaces to illustrate these ideas and then generalizes them to apply to higher dimensions This treatment then informs a discussion of handlebodies homology and low dimensional manifold theory Illustrations are provided throughout c Book News Inc Circle-valued Morse Theory Andrei V. Pajitnov, 2008-08-22 In the early 1920s M Morse discovered that the number of critical points of a smooth function on a manifold is closely related to the topology of the manifold This became a starting point of the Morse theory which is now one of the basic parts of differential topology Circle valued Morse theory originated from a problem in hydrodynamics studied by S P Novikov in the early 1980s Nowadays it is a constantly growing field of contemporary mathematics with applications and

connections to many geometrical problems such as Arnold's conjecture in the theory of Lagrangian intersections fibrations of manifolds over the circle dynamical zeta functions and the theory of knots and links in the three dimensional sphere The aim of the book is to give a systematic treatment of geometric foundations of the subject and recent research results The book is accessible to first year graduate students specializing in geometry and topology

Perturbed Gradient Flow Trees and A_∞ -algebra Structures in Morse Cohomology Stephan Mescher, 2018-04-25 This book elaborates on an idea put forward by M Abouzaid on equipping the Morse cochain complex of a smooth Morse function on a closed oriented manifold with the structure of an A_∞ algebra by means of perturbed gradient flow trajectories This approach is a variation on K Fukaya's definition of Morse A_∞ categories for closed oriented manifolds involving families of Morse functions To make A_∞ structures in Morse theory accessible to a broader audience this book provides a coherent and detailed treatment of Abouzaid's approach including a discussion of all relevant analytic notions and results requiring only a basic grasp of Morse theory In particular no advanced algebra skills are required and the perturbation theory for Morse trajectories is completely self contained In addition to its relevance for finite dimensional Morse homology this book may be used as a preparation for the study of Fukaya categories in symplectic geometry It will be of interest to researchers in mathematics geometry and topology and to graduate students in mathematics with a basic command of the Morse theory

Higher Complex Torsion and the Framing Principle Kiyoshi Igusa, 2005-08-03 We prove that higher Franz Reidemeister FR torsion satisfies the transfer property and a formula known as the Framing Principle in full generality We use these properties to compute the higher FR torsion for all smooth bundles with oriented closed even dimensional manifold fibers We also show that the higher complex torsion invariants of bundles with closed almost complex fibers are multiples of generalized Miller Morita Mumford classes

Discrete Morse Theory Nicholas A. Scoville, 2019-09-27 Discrete Morse theory is a powerful tool combining ideas in both topology and combinatorics Invented by Robin Forman in the mid 1990s discrete Morse theory is a combinatorial analogue of Marston Morse's classical Morse theory Its applications are vast including applications to topological data analysis combinatorics and computer science This book the first one devoted solely to discrete Morse theory serves as an introduction to the subject Since the book restricts the study of discrete Morse theory to abstract simplicial complexes a course in mathematical proof writing is the only prerequisite needed Topics covered include simplicial complexes simple homotopy collapsibility gradient vector fields Hasse diagrams simplicial homology persistent homology discrete Morse inequalities the Morse complex discrete Morse homology and strong discrete Morse functions Students of computer science will also find the book beneficial as it includes topics such as Boolean functions evasiveness and has a chapter devoted to some computational aspects of discrete Morse theory The book is appropriate for a course in discrete Morse theory a supplemental text to a course in algebraic topology or topological combinatorics or an independent study
