chronic illness or a daughter sitting at the bedside of her father who is enrolled in hospice family caregivers are the silent other patient in the health care drama Healthcare providers who do not attend to the needs of the caregiver not only inflict interactional suffering but dilute their treatment by not engaging the caregiver as a partner In fact they may unintentionally do harm as the caregiver flounders and thus patient treatment fails As noted by one dying cancer patient in an educational YouTube video of his cancer journey there are two patients not one If we are to eliminate the interactional suffering experienced by family caregivers we must train both the caregiver and the health care team for the important interaction and roles that are required for the successful care of the patient Caregivers lack information skills and emotional support for the tireless task they are volunteering for They need to be taught how to advocate for themselves and their patients and how to best communicate with the health care team Likewise health care providers have the skills and knowledge to provide outstanding patient centered care however they are not taught the importance of the family caregiver nor do they always understand that experience or how to help

Family Therapy and Chronic Illness Joan Atwood, 2017-09-08 Treatment for the chronically ill has traditionally focused on physical factors and symptoms despite the fact that chronic illness also affects life in an emotional and spiritual way The approach toward treatment described in this volume addresses all aspects of a patient's life including their interpersonal experiences and relationships presenting family therapists and family physicians as part of the same treatment team This volume thus provides a foundation for understanding the role illness plays in family systems The meaning an individual gives to an illness is profoundly influenced by and influences that person's social world In turn social culture and social networks both shape and are shaped by the individual's experiences Exploring how the meaning of chronic illness is defined tells us much about the individual's interpersonal relations and the resultant meaning given to the person's illness As a consequence family therapy must be an integral part of the treatment plan for chronically ill patients Family Therapy and Chronic Illness approaches chronic illness from a leading edge perspective This approach enables

therapists to listen attentively to complicated narratives Because these stories feelings and emotions are difficult to describe the clients have demanding telling tasks while therapists have demanding listening tasks This book sends an important message not just about the chronically ill but also about their families therapists and doctors and how they can work together to develop the best treatment plan possible Family Support and Family Caregiving across Disabilities George H.S. Singer,David E. Biegel,Patricia Conway,2014-06-11 Family members provide the majority of care for individuals with disabilities in the United States Recognition is growing that family caregiving deserves and may require societal support and evidence based practices have been established for reducing stress associated with caregiving Despite the substantial research literature on family support that has developed researchers advocates and professionals have often worked in separate categorical domains such as family support for caregiving for the frail elderly for individuals with mental illness or for people with development disabilities Family Support and Family Caregiving across Disabilities addresses this significant limitation through cross categorical and lifespan analyses of family support and family caregiving from the perspectives of theory and conceptual frameworks empirical research and frameworks and recommendations for improvements in public policy The book also examines children with disabilities children with autism adults with schizophrenia and individuals with cancer across the life cycle This book was published as a two part special issue in the Journal of Family Social Work
