Tabellenwerken und mathematischen Spezialinstrumenten erbrachten unsere Vorfahren verblüffende Leistungen. Dies galt ganz besonders in der Zeit der Zweiten Industriellen Revolution zwischen der Mitte des 19. und des 20. Jahrhunderts als eine ganze Reihe technischer Erfindungen, das Leben dramatisch veränderte wie Strom und Licht, Auto und Flugzeug, Telefon und Radio, und viel und vielseitig gerechnet werden musste, um all dies zu erschaffen. Zu diesem Thema trafen sich Sammler und Forscher von Rechenschiebern und anderen Rechenhilfsmitteln im Oktober 2013 in Berlin zu einer internationalen Konferenz unter dem Motto „Rechnen für Wissenschaft, Entwicklung und Produktion. Rechengeräte für die zweite industrielle Revolution.“

How did we compute in the ages before the advent of the modern digital computer? What were the instruments to help engineers, scientists, business men and others to perform arithmetic and other mathematical computations for their work? Using slide rules, adding machines, tables and special instruments, our ancestors achieved stunning results, particularly in the times of the Second Industrial Revolution. In the time frame from 1850 to 1950, a broad wave of inventions and technological developments changed life dramatically. Electricity provided power and illumination; cars and airplanes made us a mobile society; telephones and radio gave us unprecedented communication. All that required computation in one way or other. The International Meeting of collector and researchers of slide rules and other historical computing instruments of 2013 took place in Berlin, the largest European industrial metropolis in this period. This richly illustrated book is a collection of papers from this conference.

Cloud Computing for Science and Engineering Ian Foster, Dennis B. Gannon, 2017-09-29. A guide to cloud computing for students, scientists and engineers with advice and many hands-on examples. The emergence of powerful always-on cloud utilities has transformed how consumers interact with information technology, enabling video streaming, intelligent personal assistants and the sharing of content. Businesses too have benefited from the cloud, outsourcing much of their information technology to cloud services. Science, however, has not fully exploited the advantages of the cloud. Could scientific discovery be accelerated if mundane chores were automated and outsourced to the cloud? Leading computer scientists Ian Foster and Dennis Gannon argue that it can, and in this book offer a guide to cloud computing for students, scientists and engineers with advice and many hands-on examples. The book surveys the technology that underpins the cloud, new approaches to technical problems enabled by the cloud, and the concepts required to integrate cloud services into scientific work. It covers managing data in the cloud and how to program these services, computing in the cloud from deploying single virtual machines or containers to supporting basic interactive science experiments to gathering clusters of machines to do data analytics using the cloud as a platform for automating analysis procedures, machine learning and analyzing streaming data, building your own cloud with open source software and cloud security. The book is accompanied by a website Cloud4SciEng.org that provides a variety of supplementary material including exercises, lecture slides and other resources helpful to readers and instructors.
