**American Perceptions of Immigrant and Invasive Species**

Peter Coates,2007-01-09 Sometimes by accident and sometimes on purpose humans have transported plants and animals to new habitats around the world Arriving in ever increasing numbers to American soil recent invaders have competed with preyed on hybridized with and carried diseases to native species transforming our ecosystems and creating anxiety among environmentalists and the general public But is American anxiety over this crisis of ecological identity a recent phenomenon Charting shifting attitudes to alien species since the 1850s Peter Coates brings to light the rich cultural and historical aspects of this story by situating the history of immigrant flora and fauna within the wider context of human immigration Through an illuminating series of particular invasions including the English sparrow and the eucalyptus tree what he finds is that we have always perceived plants and animals in relation to ourselves and the politics to which we belong Setting the saga of human relations with the environment in the broad context of scientific social and cultural history this thought provoking book demonstrates how profoundly notions of nationality and debates over race and immigration have shaped American understandings of the natural world

Henry,2014-07-08 Eucalypts are used for the production of paper products firewood charcoal potential feedstocks for bioenergy and biomaterials as ornamentals and landscape trees and in land rehabilitation Eucalypt breeding is at an early stage with many plantings being only at the first stages of domestication The relatively small genomes of these species ma

*Ecology and Silviculture of Eucalypt Forests* RG Florence,2004-03-30 This classic forest management text examines the ecology and silviculture of eucalypts in forests and plantations in Australia and overseas The book presents approaches to the formulation of ecologically sustainable forest practices through a more fundamental understanding of Eucalyptus The 14 chapters of the book are divided into three sections covering the ecological background to silvicultural practice the regeneration and continuing development of the forests and silvicultural practice including the current practices within the eucalypt forests

*Trees in Paradise* Jared Farmer,2013-10-21 From roots to canopy a lush verdant history of the making of California California now has more trees than at any time since the late Pleistocene This green landscape however is not the work of nature It s the work of history In the years after the Gold Rush American settlers remade the California landscape harnessing nature to their vision of the good life Horticulturists boosters and civic reformers began to improve the bare brown countryside planting millions of trees to create groves wooded suburbs and landscaped cities They imported the blue green eucalypts whose tangy fragrance was thought to cure malaria They built the lucrative Orange Empire on the sweet juice and thick skin of the Washington navel an industrial fruit They lined their streets with graceful palms to announce that they were not in the Midwest anymore To the north the majestic coastal redwoods inspired awe and invited exploitation A resource in the state the durable heartwood of these timeless giants became infrastructure transformed by the saw teeth of

American enterprise By 1900 timber firms owned the entire redwood forest by 1950 they had clear cut almost all of the old growth trees In time California s new landscape proved to be no paradise the eucalypts in the Berkeley hills exploded in fire the orange groves near Riverside froze on cold nights Los Angeles s palms harbored rats and dropped heavy fronds on the streets below Disease infestation and development all spelled decline for these nonnative evergreens In the north however a new forest of second growth redwood took root nurtured by protective laws and sustainable harvesting Today there are more California redwoods than there were a century ago Rich in character and story *Trees in Paradise* is a dazzling narrative that offers an insightful new perspective on the history of the Golden State and the American West **Silviculture in the Tropics** Sven Günter,Michael Weber,Bernd Stimm,Reinhard Mosandl,2011-06-24 This book integrates the latest global developments in forestry science and practice and their relevance for the sustainable management of tropical forests The influence of social dimensions on the development of silvicultural concepts is another spotlight Ecology and silvicultural options form all tropical continents and forest formations from dry to moist forests and from lowland to mountain forests are covered Review chapters which guide readers through this complex subject integrate numerous illustrative and quantitative case studies by experts from all over the world On the basis of a cross sectional evaluation of the case studies presented the authors put forward possible silvicultural contributions towards sustainability in a changing world The book is addressed to a broad readership from forestry and environmental disciplines **Domestication Gone Wild** Heather Anne Swanson,Marianne Elisabeth Lien,Gro B. Ween,2018-09-27 The domestication of plants and animals is central to the familiar and now outdated story of civilization s emergence Intertwined with colonialism and imperial expansion the domestication narrative has informed and justified dominant and often destructive practices Contending that domestication retains considerable value as an analytical tool the contributors to *Domestication Gone Wild* reengage the concept by highlighting sites and forms of domestication occurring in unexpected and marginal sites from Norwegian fjords and Philippine villages to British falconry cages and South African colonial townships Challenging idioms of animal husbandry as human mastery and progress the contributors push beyond the boundaries of farms fences and cages to explore how situated relations with animals and plants are linked to the politics of human difference and conversely how politics are intertwined with plant and animal life Ultimately this volume promotes a novel decolonizing concept of domestication that radically revises its Euro and anthropocentric narrative Contributors Inger Anneberg Natasha Fijn Rune Flikke Frida Hastrup Marianne Elisabeth Lien Knut G Nustad Sara Asu Schroer Heather Anne Swanson Anna Lowenhaupt Tsing Mette Vaarst Gro B Ween Jon Henrik Ziegler Remme **True Gardens of the Gods** Ian Tyrrell,2023-12-22 One of the most critical environmental challenges facing both Californians and Australians in the 1860s involved the aftermath of the gold rushes Settlers on both continents faced the disruptive impacts of mining grazing and agriculture in response to these challenges environmental reformers attempted to remake the natural environment into an idealized garden landscape As this cutting edge history shows an

important result of this nineteenth century effort to renovate nature was a far reaching exchange of ideas between the United States especially in California and Australia Ian Tyrrell demonstrates how Californians and Australians shared plants insects personnel technology and dreams creating a system of environmental exchange that transcended national and natural boundaries True Gardens of the Gods traces a new nineteenth century environmental sensibility that emerged from the collision of European expansion with these frontier environments Tyrrell traces historical ideas and personalities provides in depth discussions of introduced plants species such as the eucalyptus and Monterey Pine looks at a number of scientific programs of the time and measures the impact of race class and gender on environmental policy The book represents a new trend toward studying American history from a transnational perspective focusing especially on a comparison of American history with the history of similar settler societies Through the use of original research and an innovative methodology this book offers a new look at the history of environmentalism on a regional and global scale One of the most critical environmental challenges facing both Californians and Australians in the 1860s involved the aftermath of the gold rushes Settlers on both continents faced the disruptive impacts of mining grazing and agriculture in response to [Database Management Applications in Forestry Research](#) Dietmar Rose,Luis Ugalde,1989 **Biogeography** Glen MacDonald,2002-02-28 Biogeography illustrates how environment space and time interact to control the large scale distribution of organisms This book can be used for these courses which can be offered in either department This title includes the key concepts related to the study of vegetation and animal distributions and the human impact on these distributions *Life Out of Bounds* Chris Bright,1998 Bright a research assistant at the environmental educational non profit organization Worldwatch Institute describes and evaluates the spread of alien or exotic organisms that are destroying ecosystems around the world Annotation copyrighted by Book News Inc Portland OR *Where Song Began* Tim Low,2016-09-27 An authoritative and entertaining exploration of Australia s distinctive birds and their unheralded role in global evolution Renowned for its gallery of unusual mammals Australia is also a land of extraordinary birds But unlike the mammals the birds of Australia flew beyond the continent s boundaries and around the globe many millions of years ago This eye opening book tells the dynamic but little known story of how Australia provided the world with songbirds and parrots among other bird groups why Australian birds wield surprising ecological power how Australia became a major evolutionary center and why scientific biases have hindered recognition of these discoveries From violent swooping magpies to tool making cockatoos Australia s birds are strikingly different from birds of other lands often more intelligent and aggressive often larger and longer lived Tim Low a renowned biologist with a rare storytelling gift here presents the amazing evolutionary history of Australia s birds The story of the birds it turns out is inseparable from the story of the continent itself and also the people who inhabit it **Flooded Forest and Desert Creek** Matthew Colloff,2014-08-11 The ecology and life history of the most widely distributed species of Eucalyptus in Australia the river red gum **The Journal of the**

 Newton, 2012-12-06 The quality of human life has been maintained and enhanced for generations by the use of trees and  
 their products In recent years ever rising human population growth has put tremendous pressure on trees and tree products  
 growing awareness of the potential of previously unexploited tree resources and environmental pollution have both  
 accelerated development of new technologies for tree propagation breeding and improvement Biotechnology of trees may be  
 the answer to solve the problems which cannot be solved by conventional breeding methods The combination of  
 biotechnology and conventional methods such as plant propagation and breeding may be a novel approach to improving and  
 multiplying in large number the trees and woody plants So far plant tissue culture technology has largely been exploited in  
 the propagation of ornamental plants especially foliage house plants by commercial companies Generally tissue culture of  
 woody plants has been recalcitrant However limited success has been achieved in tissue culture of angiosperm and  
 gymnosperm woody plants A number of recent reports on somatic embryogenesis in woody plants such as Norway spruce  
 Picea abies Loblolly pine Pinus taeda Sandalwood Santalum album Citrus Mango Mangifera indica etc offer a ray of hope of a  
 inexpensive clonal propagation for large scale production of plants or seedlings or somatic embryo plants by protoplast work  
 cryopreservation and genetic transformation and artificial or manufactured seed production      **Australian Books** , 1982
