Emotional Expression:

Emotional Expression G. Collier, Gary James Collier, 2014-01-14 First published in 1985 The purpose of this book is to draw together research on one aspect of verbal and nonverbal communication emotional expression The focus is on verbal and nonverbal behaviors associated with emotions A distinction is made between expressive behaviors that occur spontaneously during emotions often without a person's awareness or control and more deliberate forms of communication where the person manipulates verbal and nonverbal cues in order to create an impression The difference between expression and communication is introduced in Chapter 1 and developed throughout the book

Group Dynamics and Emotional Expression Ursula Hess, Pierre Philippot, 2007-01-29 The study of emotional expressions has a long tradition in psychology Although research in this domain has extensively studied the social context factors that influence the expresser's facial display the perceiver was considered passive This 2007 book focuses on more recent developments that show that the perceiver is also subject to the same social rules and norms that guide the expresser's behavior and that knowledge of relevant emotion norms can influence how emotional expressions shown by members of different groups are perceived and interpreted Factors such as ethnic group membership gender and relative status all influence not only emotional expressions but also the interpretation of emotional expressions shown by members of different groups Specifically the research presented asks the question of whether and why the same expressions shown by men or women members of different ethnic groups or individuals high and low in status are interpreted differently

The Anthropology of Music Alan P. Merriam, Valerie Merriam, 1964-12-01 In this highly praised and seminal work Alan Merriam demonstrates that music is a social behavior one worthy and available to study through the methods of anthropology In it he convincingly argues that ethnomusicology by definition cannot separate the sound analysis of music from its cultural context of people thinking acting and creating The study begins with a review of the various approaches in ethnomusicology He then suggests a useful and simple research model ideas about music lead to behavior related to music and this behavior results in musical sound He explains many aspects and outcomes of this model and the methods and techniques he suggests are useful to anyone doing field work Further chapters provide a cross cultural round up of concepts about music physical and verbal behavior related to music the role of the musician and the learning and composing of music The Anthropology of Music illuminates much of interest to musicologists but to social scientists in general as well

Movement and Action in Learning and Development Ida Stockman, 2004-08-13 This book presents theories and clinical practices for dealing with children diagnosed with pervasive developmental disability or PDD These are children who have a wide range of disabilities that affect their participation in even the most routine events of daily life such as eating dressing bathing and so on Unlike many who are diagnosed with classic autism however these children seem to have normal social behavior normal physical appearance the ability to learn hear see and move their bodies at will in other words none of the well known reasons that cause autistic and other children to develop differently These children have the use of all their senses but their brains are unable to process the information that is fed through them While much new research is being done in genetics and neurobiology to explain why something in these children has gone fundamentally wrong with their development clinicians and therapists who deal with them on a daily basis have needed to develop practical therapies based on how the children react to their environments Movement and Action in Learning and Development suggests that when therapists plan treatment strategies children's experiences and interactions with the world should be given the same consideration as the limits of their biological makeup Too often children diagnosed with PDD are lumped into therapy groups for the classically autistic where the focus tends to be on the distance senses hearing and vision Case studies presented in the first half of the book suggest that for children with PDD there is a disconnect between the brain and the tactile kinesthetic senses that involve body movement and physical interaction with the world Movement in turn seems to be

connected to perception interpretation of the world around and ultimately the acquisition of knowledge For children with PDD normal learning seems to be limited not only by their tactile kinesthetic sense but also by the lack of collaboration between all the senses The second half of the book demonstrates how these new theories translate into clinical practices
