

Complex Trauma Treatment Guidelines

This treatment guideline handout is based on information provided by the American Psychological Association.

Clinicians are encouraged to become familiar with different interventions to determine which treatment might be consistent with their practice and support their clients with post-traumatic stress disorder (PTSD). Mental health clinicians are also encouraged to seek outside training in these therapy modules to support their clients (American Psychological Association, 2020).

The following four treatment modules are **strongly recommended**.

Cognitive behavioral therapy (CBT)

Cognitive behavioral therapy focuses on the relationships among thoughts, feelings, and behaviors; targets current problems and symptoms; and focuses on changing patterns of behaviors, thoughts, and feelings that lead to difficulties in functioning.

Cognitive behavioral therapy notes how changes in any one domain can improve functioning in the other domains. For example, altering a person's unhelpful thinking can lead to healthier behaviors and improved emotion regulation. It is typically delivered over 12-16 sessions in either individual or group format.

Cognitive processing therapy (CPT)

Cognitive processing therapy is a specific type of cognitive behavioral therapy that helps patients learn how to modify and challenge unhelpful beliefs related to the trauma.

CPT is generally delivered over 12 sessions and helps patients learn how to challenge and modify unhelpful beliefs related to the trauma. In doing so, the patient creates a new understanding and conceptualization of the traumatic event so that it reduces its ongoing negative effects on current life.

Cognitive therapy

Derived from cognitive behavioral therapy, cognitive therapy entails modifying the pessimistic evaluations and memories of trauma, with the goal of interrupting the disturbing behavioral and/or thought patterns that have been interfering in the person's daily life.

Treatment entails modifying the pessimistic evaluations and memories of trauma, with the goal of interrupting the disturbing behavioral and/or thought patterns that have been interfering with the person's daily life. It is typically delivered in weekly sessions over three months individually or in groups.

Prolonged exposure

Prolonged exposure is a specific type of cognitive behavioral therapy that teaches individuals to gradually approach trauma-related memories, feelings and situations. By facing what has been avoided, a person presumably learns that the trauma-related memories and cues are not dangerous and do not need to be avoided.

Typically provided over a period of about three months with weekly individual sessions. Sixty- to 120-minute sessions are usually needed in order for the individual to engage in exposure and sufficiently process the experience.

Psychological Trauma and the Developing Brain Phyllis Stien,Joshua C Kendall,2014-01-02 Explore interventions and treatment methods designed to help curb the alarming trend toward violence in today s youth Written in jargon free lucid prose Psychological Trauma and the Developing Brain Neurologically Based Interventions for Troubled Children specifically shows how positive early experiences enhance brain development and how traumatic life experiences especially child abuse and neglect can affect a child s brain and behavior Through carefully selected case studies the book offers basic principles of treatment and a broad range of interventions that target the multiple symptoms and problems seen in children with a history of childhood trauma Offering a new psychobiological model of child development this book incorporates the influence of both genes and the environment and conceptualizes normal and pathological development in terms of common underlying processes For readers concerned with promoting healthy development in children and helping children recover from childhood trauma this engagingly written book

describes exactly how a child's social interpersonal environment can positively or negatively influence brain development. Throughout the book the authors highlight the interrelationship between neurobiology and psychology. They present basic information about brain development and organization, describe exactly what is going on inside the brain at each stage of development, and illustrate these concepts through a detailed case study of a preschooler with severe problems in communicating and relating. They discuss the pernicious effects that traumatic stress has on brain and behavior, differentiating between simple and complex PTSD, and review the specific brain impairments currently attributed to a childhood history of maltreatment. Using their unique psychobiological perspective and illustrative case studies, the authors evaluate the principles and strategies of treatment, showing how relationships and experiences can mitigate the effects of childhood trauma. After fleshing out the shocking cost to society of child maltreatment, the authors offer broad policy prescriptions that promote healthy development, including basic strategies for prevention and early intervention.

Psychological Trauma and the Developing Brain: Neurologically Based Interventions for Troubled Children will show you how interpersonal experience shapes brain development, what is going on in the brain during the critical first six years, how therapeutic relationships and interpersonal experience can promote emotional and cognitive development, how childhood maltreatment can damage the brain and impair the developing mind, what types of experiences and therapeutic strategies can mitigate the effects of childhood trauma, what policy prescriptions, programs, and early intervention strategies can be implemented to promote healthy development.

Moderators and Mediators of Youth Treatment Outcomes Marija Maric, Pier J. M. Prins, Thomas H. Ollendick, 2015. The study of moderation and mediation of youth treatment outcomes has been recognized as enormously beneficial in recent years. However, these benefits have never been fully documented or understood by researchers, clinicians, and students in training. After nearly 50 years of youth treatment outcome research, identifying moderators and mediators is the natural next step, shifting focus to mechanisms responsible for improved outcomes, identifying youth who will benefit from certain treatments or who are in need of alternative treatments, and recognizing the challenges associated with the study of moderators and mediators and their routine use in clinical practice. *Moderators and Mediators of Youth Treatment Outcomes* examines conceptual and methodological challenges related to the study of moderation and mediation and illustrates potential treatment moderators and mediators for specific disorders. The volume also considers empirical evidence for treatment moderators and mediators of specific disorders and illustrates how theoretical and empirical knowledge regarding moderators and mediators can be harnessed and disseminated to clinical practice. This book will be invaluable to researchers conducting treatment outcome studies, both efficacy and effectiveness, clinicians interested in evidence-based work, and in understanding for whom and why certain treatments work, and students of clinical child and adolescent psychology and psychiatry.
